### THE FOUNT OF BEAUTY.

Nature, the fount and origin of all inspiration of all the arts, is a fitting and necessary subject of study by the architect, and not only in architectural detail and enrichment. "Proportion," whatever we may understand by the term, is a matter of eye education, giving power to ori-ginate and design in beautiful ratio and harmonious contrast of dimension. Such education, if based on architecture solely, is gained at second hand. By study of natural beauty we tap a source. Since the architect is, more than ever, as well as a practical planner and constructor, the supervisor of manifold arts and crafts, he surely needs to base his knowledge and appreciation of the beautiful on a sound foundation. In his practical, everyday business he has to advise on every handicraft concerned in beautiful building. Of all such, notable examples doubtless exist; but the whole of them are insignificant when compared with the infinite store of natural beauty. And since the ornamental and decorative in each art and craft have been evolved, originally, from the study and absorption of patents. the study and observation of natural form, it would seem well that, instead of confining ourselves to man-made precedent, we should go to the fountain-head for motive and inspiration.

That from precedent we may, by toil and industry, build up a store of formknowledge, is no doubt true. That this is not the best course preparatory to design seems suggested by the consideration that somewhere at some time or epoch the forms that we now admire in rich and beautiful architecture have been, insensibly at times perchance, deduced from Nature and the natural. We may see clearly enough the result of too confined attention to old architectural form. The study of to old architectural form. The study of the letter of Classical architecture still further bound up ancient method in "orders," and the Gothic revival led to "parallels"; whereas the true designer pitches set orders and exact parallels out of the window, and, for weal or woe, gives us of his own. Every designer worthy of the name brings forth as from a refining furnace, and not as from a warehouse. To be able to do this, he must acquire powers founded on the patient study and analysis of natural beauty, exalting the "taste," giving skill to the hand, and judgment to These nowers cannot be acquired the eve. if we confine our study to building. By so doing we should risk failure and go shadow-grasping, losing the real and substantial by our neglect to go to the fount and origin of beauty.

Take a narticular instance. In one variety of Gothic capital the stalks of the floriations that adorn the bell and curve below the abacus are gracefully disposed-

not strictly, but approximately, as radiants about the axis of the column. Now, if we decide to study the graceful arrangement of the stalks of this order merely from precedent, we shall get a very limited range of example; whereas, by extending our survey into the domain of Nature, we get an infinity of suggestion; for, not to mention trees and flowers, every tuft of grass exhibits pseudo-radiant lines. Again, assume that these particular capitals have in the course of years been perfected to a certain plane of beauty, and that it is desired to make a further advance and produce yet more beautiful examples: in this case no precedent exists. As it seems fairly clear that unless we put something into our brains we cannot take anything out, further progress in the design of these capitals comes. perforce, to a standstill. We need to put in before taking out, not necessarily the same thing, but something milled and re-fined, something that we should never be able to bring forth without first mentally digesting suitable raw material, if we may so call it.

But, since every tuft of grass exemplifies quasi-radiation after the manner of our particularised Gothic capital, by reverting to an earnest and analytical inquiry of Nature, we may increase our knowledge of the principles governing graceful divergence, and in this way become empowered to make the required advance in design. We thus vastly extend the field from which we garner information, in a way impossible otherwise, though we haunt every church and cathedral in search of precedent. And we get information at first hand. In our wonderful world there is an infinity of inspiration in design, of actual suggestion to those willing to seek out causes. Mere inspection and admiration cannot greatly It is everyone's business to wonder and admire; it is the duty of the designer to search out principle. By so doing he learns the art of conventionalising. stricting study to old example seems to lead to copyism, apparently because we accumulate set form instead of gaining insight into principle. We need not a mental stockroom, but converting mental stockroom, but converting machinery whereby the elements of the beautiful may be built up from a sound basis with new grace and interest; not a barn, housing and delivering unthreshed harvestings, but a vigorous and relentless thresher—a mill, with grit-stones and winnow. We do not want a trunk-full of Gothic chapiters, but a headpiece of our own, the seeing eve, true understanding, and an intellect trained to break down the old and construct anew from the primordial and elemental; and it is difficult to see how we are to come at this, except that we seek to learn from Nature.

It may be that we suffer nowadays from the plethora of example; for universal travel, the camera, and profuse illustration have deluged us with precedent from every quarter of the globe. Yet, wanting principle, we remain dumbfounded and ineffective in our endeavours to give interest and novelty to our designs, we are driven in sheer perplexity to building bare brick walls, and pile up gaunt blocks of squared stone and marble, seeking to excuse our poverty of imagination by the plea of "simplicity." That which the designer needs, given trained eye and skill of hand, is not form to copy, but inspiration; and we may as reasonably look for so much as this in rude rock and mountain erag as in polished building stones.

The study of Nature for design purposes must be large and generous. We shall not from the observation of a tulip learn how to proportion a column. It is the whole mental and ocular education and training that counts-the sum of infinitesimals. No one knows exactly what specific studies gave him the power to proportion well. We may learn directly of tulip or narcissus in decorative design; but in proportioning, which in architecture is nearly equivalent to, and synonymous with, the whole act of designing, we draw, insensibly, from a well of acquired information the accumulated treasure of a life's observation and inquiry. Our studies, therefore, cannot be on too broad lines. No doubt, we may often glean suggestion direct. The whole earth teems with elegant form; but such opportunities are special and particular, and on the whole not helpful to that general study of cause and effect which stimulates and rouses the latent faculty of design. There is as little excuse for copying N sture as for copying precedent; indeed, the attempt is vain, since Nature will not be directly copied Even the artist must resort to strategy. From the study of building we learn

construction and variety of constructive method, and if content to copy, also architectural form; while, by the exercise of reason, we may so modify and remodel an old device that a certain degree of novelty is imparted to that which otherwise is mere repetition of the time-old. Skill, however, is here to be understood as necessary- a consideration that lends support to the idea that a more general study than that of architecture solely is necessary to the making of an architect; for it is scarcely possible to conceive of anyone adding novel interest to, while preserving the beauty of, long-existent form, unless hand and eye have been previous trained and a certain grasp of principle

We must either be content to remain copyists or launch out into independent

souse of dignity and repose st, and leave a jumble of a must be taken into con

the second indings of a building has a second of the transition of the choice for material, especially with respect to extend the charm of Hampton Court, toxic. The charm of Hampton course, with its turns my of brick and stone, set with the standard from almost all where it is and viewed from almost all a coas the agh a screen of green-leafed to s, while he most incongruous if constructed in any other material of a lighter texture. Whitehall constructed in any at mast be with a dull grey back ground and from a near point of view, would lose its dignity, and appear ponderous and out f scale with its surroundings.

lexture of design also plays an import and part in architecture. The disposition t parts and application of ornament make up the texture of a design Projec tron and recess, large or small in elevation, give texture to the design. Some of our beautiful English houses, leveld of their recesses or nicely judged projections, would lose all their charm and become very mediocre. The play of light and shade upon constructional orna ngm and solutions and their orders, pilas-nent, as columns and their orders, pilas-ters, cornices, strings, the framings of voids, are essential to the production of texture in design. The ornamenation of constructional members is equally as essential. The Gothic masters were adepts in this respect. What would some of our cathedral or greater churches ap pear like if all ornament were stripped from their buttresses, strings, parapets zables, pinnacles, and towers? True, the I am lines of construction would be left out the charm and beauty, depth and texture, would be gone. This would be even more apparent in the more flamboyant church s of the French Gothic.

The delicate crocketting and finials lace like parapets, and tabernacle work give grace and texture to these buildings the want of which would leave, in many cases, plain unimpressionable and lifeless of architecture.

The deep undercutting, the play of light and shade along the members, takes away the hard line, each member blending reset in true harmony with the whole.

Internally the same necessity for the bests ince of texture applies. Imagine the fair vaulting of the Henry VII. Chapel, Westminster, stripped of its ornament Lie delicate lines would disappear, and in place a complex geometrical problem ald impress itself, and make us turn coay sick with apprehension as to its safety, or think of the wood roof We eminister Hall bereft of its tracery; its nsine tional members would appear in thor greatness, coarse and un

Wall surfaces if properly treated give A tree's an interior. the yeads and reflect the light ledge of materials, stone, brick, wood cements, etc., a continued practice and netual acquaintance with buildings giving t gether with at regard to evidence of texture, the manner in which the varying degrees have been obtained, defined is of the greatest in and, further, a thorough knowledge of the aesthetics in architecture as applied to surface treatment, are essential.

A little more care in this direction by architects would completely transform some of our modern towns and villages. We are not all born to build municipal buildings or great cathedrals, but there is an abundant opportunity available for practice in the use of texture in material in the housing of the working classes. The hard-faced brick monstrosities (sometimes varied to brick and rough-cast) put up for the habitation of our working-men must have a depressing influence upon their lives as they live and look upon them day after day. There is no attempt to produce restfulness, repose, and quiet about these dwellings; they push themselves forward in blatant boastfulness of their superiority over their surroundings. The absence of texture is painfully apparent.

One other point about the careful use of material is that it gives tone or colour to buildings. The English is not a suitable atmosphere in which to practise highly-endoured architecture, but much can be done in breaking monotony and giving tone or tint to a building by a careful and considered application of texture in relation to the material employed.

The bright and deeper reds, purples and silver greys of some of our bricks, the browns and reds of tiles, and purple, green, and rustic slates, or stone tiles, will give excellent tone and texture to any building when properly used in harmony

with surroundings.

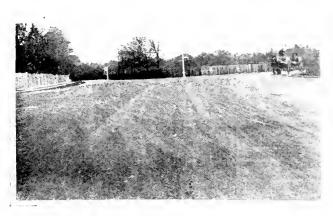

FRANK II. HEAVEN, A.R.I.B.A., P.A.S.I., Aberkenfig. ---

### "CLARMAC" AND "CLARPHALTE."

The heavy demands on our roads by the transition from horse to motor traffic have compelled our local authorities—or some of them-to turn their attention to the absolute necessity of providing roads which can be constructed at little more than the initial constructed at fittle more than but shall yet to more durable and economical. The results so far of the demands of road engineers for a waterproof, resilient, dustless, and mudless roadway, inexpensive to maintain, and capable of resisting the heavy and fast motor traffic, have not been worth much. One has not to travel far in any direction to note the failure of some of the many methods and materials tried, and the controversies in our own columns and those of our contemporaries have been frequent.

There is to-day a consensus of opinion on the part of the leading road engineers and borough engineers and surveyors that bituwith suitable unuons roads compounded aggregates are alone to be relied on if low first cost and economical maintenance are to he secured. Water-bound macadam is hope-lessly out of date, and tar-bound stone roads will soon be as much so. The best of all aggregates, if uniform consolidation—the only real guarantee of a waterproof surface—is desired, and a "fool-proof" road is hoped for, sired, and a "fool-proof" road is hoped for, is suitable blast furnace slag, free from honeycombed material, and bound inseparably together by a really rehable bituminmixture.

From our own experience, and after the From our own experience, and after the inspection of many roads on which it has been laid, we are convinced that no other material yet tried affords such good results as "Clarmac," made and supplied by Clarmac Roads, Limited, of Hallam House, 5, Central Baildings, Tothill Street, Westminster, and of Birmingham, Manchester, and Bristol, with its own slag works at Bilston and Chatterley. The material answers in and Chatterley. The material answers in all respects to the requirements of to-dry, and those who use the roads and those who

following the surfaces of old concrete preparation that it is a patch of new, or following that it is a rough concrete floor of countrylying the "finish coat". The

surface of the old concrete is brushed as clean as possible with stiff brushes, and then gone over at least twice with a steam jet. An ordinary piece of finch gas pipe makes a very satisfactory jet nozzle. This short length of pipe is connected to a steam hose so that it can be moved about readily. The steam is supplied by the boilers of the mixer or hoisting engines. The steam will clean and heat the concrete surface, leaving it perfectly dry; so it is important to drench the surface thoroughly with water after cleaning with steam. In cold weather it is found advantageous to use hot water. Immediately after the surface is thoroughly cleaned and drenched, the new concrete is applied.

Excellent results have followed the use of this method of cleaning; but it is essential that the surface of the old concrete be thoroughly drenched with water after using the steam jet, otherwise the new concrete will not a there to the old.

Cleaning with Acid.—This method includes the washing of the surface of the old concrete with a solution of hydrochloric (muriatic) acid (one part acid to two parts water, after which the surface must be washed carefully and thoroughly to remove any tree acid.

any free acid.
This is a very commonly applied method of cleaning old concrete surfaces preparatory to placing new concrete against them, and is considered by many the only safe treatment to use, especially in cases where a "finish coat" is to be put on after the concrete base is set

### THE LONDON COUNTY COUNCIL.

At the meeting yesterday (Tuesday) after-noon the Building Act Committee submitted a series of fresh regulations with respect to buildings wholly or part of reinforced con-crete. They reminded the Council that on November 21, 1911, regulations were pre-pared in this matter. These regulations were pared in this matter. These regulations were prepared after consultation with the Royal Institute of British Architects, the Institution of Civil Engineers, the Surveyors' Institution, the Concrete Institute, and other associations and committees interested in the After prolonged negotiations with matter. the Local Government Board a revised draft of the regulations was prepared, and the Council on June 24, 1913, made regulations in accordance with this draft. The amended regulations were submitted to the Board for allowance, and in accordance with the provisions of the Act the four institutions beforementioned were informed of the Council's intention to apply for the allowance of the Board. Further negotiations have taken place with the Board and the institutions, and numerous suggestions for modifications in the regulations have been received. committee think that a large number of these suggestions might be adopted, and they have accordingly prepared and now submit a revised set of regulations. The Local Government Board has stated that in its opinion the regulations as now amended might properly be allowed, and the Royal Institute of British Architects has placed on record its of British Architects has placed on record its opinion of the great value of the regulations to architects not only in London, but throughout the whole of the Empire. The regulations as now amended are less onerons than those made on June 24, 1913, and more in line with the regulations made on November 21, 1911. If as the result of experience gained during the next few years it should be found that alterations are desirable, there should be no difficulty in modifying the regulations. The committee therefore recom-The committee therefore recomregulations. mended:

regulations. The committee therefore recommended:

a) That the resolution of June 24, 1913, making egulations with respect to the construction of build one, wholly or partly of reinforced concrete and with respect to the use and composition of reinforced concrete in such construction, and the further resolution of July 1, 1913, confirming the same, be resembled the That, pursuant to the provisions of section 23 of the London County Council (General Powers) vet, 1909, regulations with respect to the construction of buildings wholly or partly of reinforced concrete and with respect to the use and composition of reinforced concrete in such construction, the made, to That notice be given to the Royal Institution of British Architects, the Surveyors' Institution, the Institution of Civil Engineers, and the Concrete Institute, of the Council's intention to apply to the Local Government Board for allowance of the regulations specified in the foregoing resolu-

tion (b), and that notice be advertised in daily newspapers and technical papers circulating in London. (d) That, on the confirmation of the regulations specified in the foregoing resolution (b) and after the expiration of one calendar month from the after the expiration of one calendar month from the date of the appearance of the advertisements specified in the foregoing resolution (c), the necessary steps be taken to obtain the allowance of the regulations by the Local Government Board, and that the Board be asked to fix a date on which the regulations shall come into force.

The Building Act Committee also reported as to the action taken by them during the past three months, and observe that the total length of new streets sanctioned was one third mile only. 1,226 notifications were received with regard to structures alleged to be in a dangerous state. In accordance with the provisions of Part IX. of the London Building 1894, a survey was made in each case. In 125 cases it was found that the structures were not in a dangerous condition, and consequently no further action was necessary. In 1,101 cases notices were served upon the owners requiring the removal of the owners requiring the removal of the danger. In order to secure compliance with the Council's notices, it was necessary in some cases to obtain orders from magistrates, and in fifty-six cases in which such orders were not complied with the committee arranged for the Council's contractors to take down the dangerous portions of the structures. As a temporary expedient they arranged for forty structures to be shored up or hoarded in by the Council's contractors. Surveys were made of ten structures which were alleged to be in a dilapidated or neglected condition. Proceedings were com-menced for obtaining the demolition or repair of five structures. In two cases they arranged for structures to be demolished in default of compliance by the owners with orders made by magistrates.

It was decided to contribute one-third of the estimated cost, £450, of a proposed widening at the junction of Bermondsey Wall and Flockton Street, by the addition to the public way of part of the site of the Golden Fleece public-house. Bermondsey Wall is a continuation of Rotherhithe Street, various widenings of which have been executed by the Council and the borough council in co operation. By the improvement the width of Bermondsey Wall at the part in question will be increased for a distance of 24 ft. from 12 ft. to 24 ft., and that of Flockton Street for a distance of 60 ft. from a minimum width of 9 ft. to a general width of 11 ft.

The Education Committee reported as to the progress made with the scheme for the reduction of accommodation in classrooms in elementary schools to maxima of forty places in senior departments and forty-eight in infants' departments during the first triennial period ended March 31 last. They drew attention to the fact that the works completed during the year ended March 31 last, and the works in the builder's hands on that date, were undertaken before the issue of the Treasury minute with regard to the restriction of capital expenditure owing to the war. In connection with the scheme, which is to be completed within a period of fifteen years from March 31, 1915, the Council on July 23, 1912, agreed (a) to complete certain new schools, enlargements, and adaptations, and to remodel or rebuild certain old schools within three years from March 31, 1912; (b) to complete the modernising of certain schools within five years from March 31, 1912; (c) to commence the structural work in connection with the modernising of certain schools within five years from March 31, 1912; (d) to reduce the accommodation of 1,000 classrooms to the new maxima within five years from March 31, 1912; and (e) to provide 24,000 school places in each triennial period by means of new schools and the enlargement or improvement of existing schools. connection with the scheme, steps are being taken to deal with the problem of "noisy" Owing to unforeseen circumstances it has been necessary to make certain variations in the three years' programme, and on March 31, 1915, this included the following The erection of twelve new schools, the enlargement of fifteen existing schools, the adaptation as elementary schools of three pupil teachers' centres or secondary schools, and the modernising of twenty-three existing schools. During the three years under review

six schools (3,688 places) have been pleted; three schools (3,304 places) will probably be completed by the end of the summer pleted; three holidays, 1915; one school (996 places) will completed in November, another school (1,480 places) in December, and the remaining school (996 places) early in 1916. In the case of twelve other schools (3,084 places) the work of culargement has been completed; the work will be completed shortly in the case of two others (448 places); and the enlargement of the remaining school (468 places) will probably be completed by the end of the summer holidays, 1915. Two of the adaptations (507 places) have been completed, and the remaining case will probably be comand the remaining case win probably be com-pleted by the end of July, 1915. Of the twenty-three schools specified for completion by March 31, 1915, sixteen have been finished: in two cases the modernising will probably be completed shortly, in one case by the end of the summer holidays, 1915, and in three cases by Christmas, 1915. With regard to the remaining school, one section the work had been completed. twelve schools the modernising of which is to be completed by March 31, 1917, a tender has been accepted in four cases (the Haverstock Hill, Grafton Road, Winchester Street, and Wolverley Street schools); plans have been approved in three cases (the Pritchard's Road, St. Paul's Road, and Burrage Grove schools); in one case (the London Fields school) plans are under consideration; and in the remaining four cases plans are not yet in hand. Of the ten schools the modernsing of which is to be commenced by March 31, 1917, in two cases (the Victoria and Southampton Street schools) a tender has heen accepted; in three cases (the Sumner Road, the Neckinger, and Webb Street schools) plans have been approved; in one case (the Jessop Road school) plans are under consideration; and in the remaining four cases plans are not yet in hand. 995 classin existing schools, previously recog nised for more than forty or forty-eight children, have been replaced by classrooms with accommodation within the new maxima, either by modernising old schools, carrying out minor structural alterations, or writing down the accommodation. There will, there fore, remain only five classrooms to be replaced or written down by March 31, 1917, in order to comply with the agreement with the Board of Education. Of the 24,000 permanent school places (including those in the "minimum" programme) which the Council undertook to provide by March 31, 1915 (the end of the first trienmial period), 14,339 places had been completed at that date, whilst tenders had been accepted for proposals involving a net addition of 10,059 further places. In addition to the places referred to above, the Council had at March 31, 1915, decided on the provision of 66,342 new places, of which 6,690 were in the contractors' hands. In the case of twenty-eight noisy schools, steps have been taken to over-come the difficulties arising from the noise of In the case of sixteen other schools steps will be taken. In fourteen cases it does not seem possible to take any action, or it has not been considered necessary to do so.

Mr. Thomas Ni-bet, the city engineer, ha-been appointed to the dual offices of city engineer and master of works to the Glasgow

Corporation.

The new infectious diseases hespital built by the Rural District Conneil of Easington at Thorpe, near Easington, at a cost of £12,000, has been formally opened. The architect was Mr. Hugh T. D. Hedley, of Sunderland, and the contractors were Messus. Christopher Brown, Limited, of West Hartle pool.

We regret to hear that our old correspondent Mr. Harry Hems, of Exeter, has suffered a great bereavement in the death of his wife after forty-sown years of happy married life. Mrs. Charlotte Presswell Hems, who had been in all-health for the past three years, died at their residence, Fair Park, Exeter, on the 29th ult. aged 73 years. The funeral took place in Exeter Cemetery on Saturday. Mr. Hems, we are sorry to learn, has himself been in indifferent health for some time with sclerosis of the spinal cord, making walking without support impossible and writing a matter of deficulty. We regret to hear that our old correspondent

committee, the members of which are prepared to give applicants the benefit of their personal experience and advice, with a view to finding some solution to the applicants difficulties. The idea is that of personal service, and the Professional Employment Committee has been fortunate in securing the co-operation of Messes. Henry T. Hare, F.R.I.B.A., Geraid C. Horsley, F.R.L.B.A., and Pani Waterhouse, F.R.L.B.A., who form the advisory committee, and to whom will be referred any applications received by the Professional Employment Committee, of the kind indicated The Professional Employment Committee of the Architects' War Committee loses no opportunity of turning to good account any circumstances which may assist it in providing paid work for architects who are in distress owing to the War. An instance of this occurred when the "Clan Grant" was sunk by the "Emden," and with her Professor Geddes' collection of drawings en route for Madras to illustrate his lectures on cities and town planning. On hearing of the disaster the committee at once set a number of architects at work to replace the drawings lost, from Professor Geddes' original notes, and the news that the work was an hand was cabled to him. It seems from a communication recently received from Professor Goddes, expressing his appreciation of the work accomplished by all concerned. that the cable crossed his letter asking for the help which had been given already in anticipation. In the meantime the Professor had been carrying on as best he could with Indian plans and such European scraps as he could muster. He was not only delighted but surprised at the quantity as well as the quality of the exhibits sent out to Madras, where the first Cities and Town Planning Exhibition was held This exhibition was attended by representatives of most of the sixty live towns and cities of the presidency, which roughly compares in population and extent to the United Kingdom. Their leadang catizens and professional men, engineers, and others attended, and for the latter there were held practical classes in connection with the improvements in progress. Something of the same kind will be done in Bombay and Calcutta, and in this way the cities are being reached, and in some instances more fully than is the case as yet at home. Professor Goddes expresses the hope that the assistance which the committee has rendered to him is but a phase of that wider co-operaestate of a permitted to take part in thou which is so desirable towards the result of a law ordinal with these Regn newal of cities, whether those destroyed by war abroad or those deteriorated in peace constructions of the Competitions at home, and we are sure he will not be disappointed.

> The sixty-eighth annual general meeting of the Builders' Benevolent Institution will be held at Koh-i Noor House, Kingsway, W.C., or Wednesday week, July 21st, when Mr. George Holland, the president, will take the chair. A numerous attendance of all friends is very desirable. Like all other institutions of the kind, the Builders' Benevolent Institution is feeling the pressure of the times very severely and much more so than some, owing to the fact that the industry it serves has been more sorely tried by the war than any other. It is, therefore, most necessary ther a special effort should be made this year to succour the victims of the hard fight we are all making to keep going till the better days dawn which we believe are in store for The state of the s those who have succumbed in the Lard mall a k-ray struggle

The case which we report in our log column elsewhere, in which one of the City magistrates very properly convicted for failure to report to the district surveyor the nature of measures being taken to prevent the consequences of an air raid on an important building, should be heeded by all property owners, and by those employed by them. All will agree that any such work should only be undertaken under the direction of the architect of the building, or in his absence by some other competent architect, and that notice should be given to the district surveyor. There is always risk when additions of any kind are made to a building by those unacquainted with the nature of any of its parts. There is always danger to adjoining owners when those not so acquainted are allowed access to buildings except under due supervision. We have little doubt that the magistrate, in the case referred to, took care to assure himself of the competence of the firm engaged, and think he was justified, on that and other accounts, in imposing a nominal penalty. But in any future cases of default we take it for granted there will be no disposition to minimise precautions which in these days of danger and difficulty are more incumbent on all of us than ever in the interests of public safety.

The proceedings of the Town Hall Committee to be submitted to the Manchester City Conneil to-day contain the correspondence which has passed between a special sub-committee and the city surveyor (Mr T. de Courcy Meade) relating to certain employees in his department who were dismissed by him because there was not work They themselves represented that for them. they had been dismissed because they had declined to enlist as soldiers, and they appealed to the Town Hall Committee, A sub-committee was appointed to investigate. On June 4 the sub-committee sent a letter to the chairmen of various committees stating the circumstances in which the city surveyor had dispensed with the men's services, and asking if suitable work could be found for the men in another department. In reply, the several committees appealed to said they could not find any suitable work. The subcommittee, therefore, recommend that the suggestions contained in their report dated May 12 be approved. The report of May 12 states that the sub-committee had fully considered the matter, and had conferred with the Lord Mayor in the presence of the city surveyor. At the outset the city surveyor admitted that he had made a mistake when he gave two men seven days' notice to leave instead of submitting the matter in the form of a recommendation to the Town Hall Committee. "Your sub-committee." report of May 12 proceeds. "are of opinion that in substance the alternative that was offered to these men was enlistment or dismissal, especially in view of (a) the city surveyor's letter to the staff, (h) his reports to the committee, and (c) to the fact that these men refused to enlist, while all those who enlisted and those who are ineligible for enlistment have been retained in the corporation service. They are further of opinion that there is not sufficient work in the city surveyor's department to justify the retention of the services of the whole of the men who did not enlist, and that the staff should be reduced, and that the services of the three men in question can be dispensed with on this ground." With regard to the staff under the Town Hall installations which illustrate the latest trend Committee, they did not think that any in street lighting.

on first that the office of the most state of the office o Press with regard to the art a wheat we At a meeting of the Line Hall Canton So on June 25 it was moved that the sub-committee's report be approved and that the notice to two of the man be confirmed, and that a month's notice to the Warf man be given terminating his source with the poration. An amendment was in vel that two of the men, with the approval of the city survey c, be reinstited, and this socarried.

A hig deal in London property has just been effected with the sale, for the sum of close on £250,000, of the freehold of the Arundell Estate, in the vicinity of Piccadilly Circus, with frontages to Shartesbury Avenue and Coventry Street, and embaucing an area of 34,500 ft. Included in the property is one of the few surviving relics of the Georgian period to be seen in the streets of the Metropolis—a well-known silversmith's -which displays an inscription informing the passer-by that Lumbert's are "Gold smiths and Silversmiths to their Majestie-(George III. and his Consort) and to her Royal Highness the Duchess of Kent." Mr. R. M. Phillips, of 97, New Bond Street, who has effected the deal, states that the disposal of the estate fore-hadows another improvement in the scheme of alteration which has been going on in the region of Piccadilly Circus. Other property may be involved at a later date, but the plan, so far as it can be explained at present, is to raise on the site a building which will provide "a combination of pleasure and entertainment, with all the comforts of a palatial hotel and restaurant. Arundell Street, which runs through the centre of the block to Panton Square, derives its name from the Lords Arnudell of Wardour, a title perpetuated in another wellknown thoroughfare near by. On the Coventry Street side of the property there is a frontage of 117 ft., while in Shaftesbury Avenue, and close to the Trocadero, the extent is 105 ft.

 $\Lambda$  useful paper on the effective illumination of streets was read on the 30th ult. by Mr. Preston S. Millar at Dear Park, Md U.S.A., to a joint session of the American Institute of Electrical Engineers and the American Illumination Society, which appears in the July Transactions of the first-namel body. The paper mentions the dependence of effectiveness in street lighting upon municipal appropriations and efficient lamps, but dis cusses more particularly those aspects of effectiveness which are dependent upon skilful utilisation of the light to produce the most effective illumination. There are included a classification of streets, a statement of the objects of street lighting and the elements of vision under street-lighting conditions. The paper emphasises three considerations which are sometimes neglected in street lighting dis cussions; namely, the silhonette effect, specular reflection from street pavements. and glare. The remainder of the paper is given over to a presentation of the variables upon which the effectiveness of street illumi nation depends, and upon the influence which each feature of the installation exercises through these several variables. As a part of this discussion illuminating efficiency values for the several modern street illu minants are given. The appendix includes statistics and photographs of some very recent

BLOOMSBURY.—A new synagogue is in course of erection in Alfred Place, Bedford Square, from plans by Mr. Claude W. Ferrier, of Waterloo Place, Pall Mall. In addition to the main synagogue on the ground floor, there will be a small synagogue in the basement for daily services, rooms for meetings and for the secretary and ministers, and a residence for the caretaker. synagogne, including the ladies' gallery, seats 600 persons. Upholstered tip-up seats are provided, and a full complement of retiring rooms. The construction is of a fire-resisting character throughout and the function of a fire-resisting character throughout, and the front elevation is in Portland stone. The foundation contract is in the hands of Messrs. Ford and Walton, Ltd., of Kilburn. Mr. R. H.
Kellond is the clerk of works.

EDGBASTON.—With Masonic ceremonial
the foundation stone was laid on Saturday of

the new church which the parishioners of St. Augustine's, Edghaston, are erecting to the memory of St. Germain at the junction of Portland and City Roads. The new church has been designed by Mr. E. F. Reynolds, in competition with twenty-one other Birmingham architects, and accommodation will be provided for 700 worshippers. The plan is set out with the customary arrangement of nave and aisles, the church being entered by two western porches and by an additional door at the east end of the north aisle. On the south side of the chancel is the organ chamber, and on the north side the morning chapel. on the east of the chancel is a semi-circular apse, covered with a semi-dome, beneath which the altar will be placed. Behind the apse is an entrance leading to the choir vestry and clergy vestry. The length of the church from the west wall to the end of the apse is 128 ft., and the width across the nave and aisles 56 ft. The columns supporting the arches on each side of the chancel will have Swedish green marble shafts, with white marble caps and bases; and the columns bemarore caps and pases; and the columns between the aisles and nave will be of Shap granite, with Portland stone caps and bases. The roofs will show massive trusses and purlins, and it is intended to decorate these times with patterns in column The colum bers with patterns in colour. The walls and porches will be plastered and left bare until it is possible to add their decoration of fresco painting and model plaster work. It is hoped that the walls of the apse will eventually be panelled with marble, and the semi-dome covered with mosaic. The floor under the seats will be laid with wood blocks, and the aisles and chancel will be of red quarries. grey stone, and green slate, laid in decorative Externally the walls will be of patterns. Externally the walls will be of grey brick, with red-brick angles to the piers. Stone is introduced in the window frames and copings, and in decorative patternwork in the gables, and there will be seven stone panels carved with figures in low relief. The roof will be covered with Italian tiles, and a bell turret will rise above the ridge of the roof The church is to be completed by March next

STAMFORD STREET, S.E .- The King George Hospital, in Stamford Street. S.E. the largest and one of the best equipped of its kind in London, is complete, and was opened for inspection on Wednesday last.

The building, which has been equipped by easy stages, was originally destined for his Majesty's Stationery Office. It is six floors in height, is divided into sixty-five wards, and contains 1,650 beds. The building was erected in height, is adviced into standing was erected contains 1,650 beds. The building was erected from plans by, and under the supervision of, Mr. R. J. Allison, F.R.I.B.A., of H.M. Board of Works. The original contractors for the whole of the work were Messrs. Perry and Co.. Ltd., of Bow, E. The alterations to serve as a hospital have been executed by the Director of Barrack Construction from plans by Mr. Edwin T. Hall, F.R.I.B.A., of Bedford Square. The block has a frontage of 323 ft. to Corporal! has a frontage of 323 ft. to Cornwall Road, and a depth of 189 ft., with an average height above pavement of 79 ft. The construction is of reinforced concrete, the floor slabs being  $3\frac{1}{2}$  ins. thick and calculated for a weight of 2½ cwt. per sq. ft.; the windows are provided with steel sashes. The premises were fully illustrated in our issue of December 6, COMPETITIONS

He served the control to the of the South African Wor with the Day of Cambridge's Yeomanry, and on the earth of the war last August he immediately gave up his profession as an architect at Burnley. up his profession as an architect at Burth on to join the Yeomanry again. He was men-tioned in despatches by the General of the tioned in despatches by the Ceneral of the Division for conspicuous coolness and be every in an engagement in Flatders, and was promoted to the rank of sergeant. On Saturday, June 19, Sergeant Smart got leave of absence for seventy two hours, and went to Burnham to spend them. He seemed very overstrung, and it was thought that he was suffering also from the effect of German 2as. He is one very ill almost as soon as he wall are related very in almost as seen as he to day and at all aburdant, was removed to the military hos pital there, became unconscious, and died on Wednesday.

Mr. David Adamson, retired builder, luner

leithen, lost his life through a shooting accident on Wednesday last. Mr. Adamson re-tired from business as a builder in Edinburgh a number of years ago, and went to reside in Innerleithen, where he was a generous sup-porter of all schemes which needed help in the town. He took an active part in the affairs of the town, and was a town councillor.

PROFESSIONAL AND TRADE SOCIETIES.

ROVAL ARCHEOLOGICAL INSTITUTE.—The annual meeting of the Institute was held at Barlington House on Welnesday. Sir Henry Howorth, President, occupied the chair, and, in moving the adoption of the report, stated that the Institute had had another year of successful life, and had never been meete president that the place of Mr. Mill Stephenson, and the following were elected members of the council: The Rev. D. H. S. Cranage, the Rev. E. S. Dewick, M. S. Giuseppa, Dr. Phila, Norman, Mr. H. Plowman, and Professor E. S. Prior, F.R.1B. A. Professor G. Bald win Brown read a paper entitled: "Was the Anglo-Saxon an Artist?" He said that there was a sufficient body of valid evidence the profession of a Anglo-Saxon possessed an artist. ARCHÆOLOGICAL INSTI ROVAL the Angle-Saxon possessed an artistic capacity quite on a level with that of his Continental contemporaries, and there was no real foundation for the popular projekt no real foundation for the popular projudicy which regarded him as a rather counsy hourish creature, who had to subsides the needy foreigner to do his artistic work from the conseded that all densities cases were to be given in favour of the foreigner, but there still remained the consequence covering almost the whole AngleSever period, the tumb furniture, including the Kentish inlaid jewels of the pagan epoch the ring of Ethelsmith, and the Durham embroideries of a later time, hat he ment on the origined which had never been in doubt. If the Gospels of Lindisfarne be handed ever to Celtic scribes, it was impossible to with If the toospes of Lambstarne be handed ever to Celtie scribes, it was impossible to with-draw from native Anglian brains and fingers a large share of the responsibility for the Rathwell and Beweastle crosses. These were things that "cannot be spoken against

Mr. Percy Heaten has a gived instructions from the rural district council of Preston. Lanes, to prepare a scheme for a new water main and the erection of a water tower to hold in non willions.

The corporation of Birmingham accepted. with thanks, at their meeting yesterday (Tuesday) the gift from Mr. Alexander M. Chance and the subscribers of an area of 33,611 square yards of land adjoining Workey Park for the extension of that open space.

West Hartepool and partly West Hartepool and partly or district of Hartlepool. Mr. the borough engineer, said d 1,210 acres of land within 4 1422 acres in the rural et al., Stranton, Seaton, and It. Lind generally was suitable proximity to large industrial the development of estates, and there was a great future for the epy to questions by Mr. Jevous,
Durham County Conneil, Mr. d there were 1.216 unoccupied West Hartlepool in 1911, as com 515 in 1901, but in the inter years a great wave of depression the whole country, and West saffered as other places. Mr. I the country council did not want the county council day not want the etive to a town planning scheme model suggest for the Board's conre the event of their approving of shorie, that the rural authority should to one say by way of representation on responsible authority. Mr. Jeffries, for tural district council, submitted that, ing regard to the fact that the rural polation had been stationary for twenty cars there was no need for a town-planning heme Mr. Foster also opposed on behalf ( the Greatham Parish Council. The owners t Tarstall estate desired to be excluded tom the scheme, and Lord Eldon objected is an the scheme, and Lord Enton objected to theme on the ground that the time was cut upe. Mr. Tilly said his clients, Messrs, W. Gray and Co., recently bought ninety acres of the land included in the scheme. Their intention was to build a garden city. to a workmen employed at the proposed new shipyard, and it would be a great hardship at their plans were affected by the scheme.

M. Paul Lambotte, Directeur des Beaux Arts de Belgique, has arranged at the Goupil Gallery an exhibition of paintings, sculpture, Gallery an exhibition of paintings, sculpture, and other works of art (including modern Fleinish lace, leather-work, and embroidery) by Belgian artists. Among the paintings are a landscape triptych, by M. Léon Frideric, and works by Madame Alice Reiner, M. Fernand Khnooff, and M. Alfred Reiner, M. Fernand Khnooff, and M. Alfred Delaunors Two galleries are filled with an exhibition of old Flemish towns toil paintings and original etchings, by M. Julien Celes. The names of these quaint, old-word cities are on every lip, though and cities are on every lip, though some of them have practically ceased to exist. Thus we have "Marson de Pauvres, Nieuport olestroyed," "Valle Cour à Lierre," "Jour de Marche, Malines," showing the cathedral, with its magnificant unfinished tower, and "Matin à Nieuport," M. Celos a an etcher especially achieves success in his pictures of winter, of which the best are "Le Hamein sous la Neige," "Le Petit Marche en Hiver," "Soir d'Hiver au Beginnage de Lierre," and "Le Degel, Bruges," Wisely he has not attempted to realise the havor of the war, which has practically wiped out of evistence many of these Flemish towns and villages. The public will, Flemish towns and villages. The public will, we trust, second M. Lambotte in his efforts to reheve the necessities of his Belgian art brethren.

Writing in "The Nineteenth Century and After" on the effect of six months' war on the timber supplies of England, Mr. E. P. Stebbing asks whether we are making full use of the opportunity which the shortage in timber supplies is affording us, and, further whether whether the state of the control of the supplies is affording us, and, further whether supplies is affording us, and, further whether supplies is affording us, and, further whether w ther, whether we are considering the forestry problem in the new aspect in which the war presents it. Much is being done by the Boards of Agriculture, both English and Scottish, in the direction of drawing the attention of proprietors of woods to the possi tention of proprieties of woods to the possibilities presented by this unique opportunity in clearing out woods of poor development, which have suffered irretrievably from and or show damage; and, secondly, in section, they thurstag promising young woods in all rights the material as pit wood. Some

ings are more expensive, but, provided they can be recovered for further use, they can be made to pay; and by offering an extra inducement by way of pay the men are being persuaded to recover them. Once the initial difficulty of introduction and recovery of these props is surmounted the managers are unlikely to go back to the wood prop, and the market for this article will be proportionately lessened at a juncture when, with tionately lessened at a juncture when, with the advance in British forestry, it is most unportant that it should be maintained.

Further, is it not time that a decision should be arrived at as to the percentage of the available plantable land in the country which should be maintained under woods in the interests of the community as a whole? It is known that there are several million acres of plantable land which could be made to produce a proportion of the materials now imported. Incidentally, the woods would also give rise to flourishing industries, such as pulp mills, furniture and toy factories. The Blue Books of the Forestry Commissions have pointed out that town labour was useless for danting and general forestry work, as the townsman could not handle a spade or stand the hard work and climatic conditions en-tailed by forestry operations. This plea was true at the time. It is a question now, howtrue at the time. It is a question now, however, whether large planting schemes could not be put into force at the conclusion of the war. Numbers of soldiers might be induced to take to forest work, and planting on a large scale could be undertaken. rme at the time.

In the report of the progress of the Ord-nance Survey to March 31, 1915, it is stated that the publication of the 12,500 survey of Ireland was completed on August 31, 1914. This survey was begun in 1887, and thus took This survey was begun in 1887, and thus took twenty-seven years to execute. The area of Ireland is 52,400 square miles, and the average out-turn per annum was 1,200 square miles. The total cost was £1,400,000, and the average cost per annum was £51,850, and per square mile £43. These figures include the cost of all field work and of the levelling, of printing, and publication of both 1/2,500 maps and 6-in, mans, and the delineation of boundaries. and 6-in. maps, and the delineation of boundaries and sites of antiquities. During the year experiments were continued with a view to the production of a new type of 1-in. map.

The editor of Indian Engineering expresses regret that the designs by Messrs. Landseer Lutyens and Herbert Baker for the Government House and the two Secre-tural Buildings at New Delhi Lave been cut down for economical reasons. Our contemdown for economical reasons. Our contemporary urg's that the principal buildings in the new capital ought to be worthy of their purpose. As it is, the editices are to be faced with red and white Agra sandtone, but no one would have complained if the material had been marble. There is no doubt that the effect of the buildings in marble would have been greatly enhanced, but the cheaper material having been chosen, it seems unnecessary to mar the effect by further economics.

The Bill creating the State Board of Architects and providing for regulation and examination of all architects practising their pro-fession in the State of Florida has passed the Senate, and, having been passed by the house formally, has been certified to that body as notice of completion of legislative action on It now goes to the governor for signature. Before passage the Bill was amended so as to make 20 dol. anstead of 25 dol. the license, and further amended so as not to apply to buildings costing less than 5,000 dol.

It has been announced that the Dominion Government will continue the construction of all public works under contract in Canada.

Apart from the war, the total expenditure of the Canadian Dominion will reach 200,000,000 the Canadian Dominion will reach 200,000,000 dollars for the year, while the war expenditure will mean an addition of 100,000,000 dollars. The programme for the current year includes an expenditure upon public works of 25,000,000 dol., and on capital account and works of harbour commissioners of over three The little that the material as pit wood. Some the office of the postum at once. The Lock of the control of the postum at once. The works of harbour commissioners of over three volumes of the war to be postumentally as without parallel. Iron to minimise unemployment in Canada by maintaining its programme of public works, including the LRC, terminals at Halifax, the

Welland Canal, the Quebec Bridge, Northern Territories and Hudson Bay Rail-Northern territories and Hudson Day Rall-road, and terminal elevators and harbours at Halifax, St. John, Quebec, Montreal, Toronto, Hamilton, Port Arthur and Fort William, Vancouver, and Victoria.

"Masonry," by Professor Malverd A. Howe condon: Chapman and Hall, Limited, (London: Chapman and Hall, Limited, 6s. 6d.), is an American work dealing conos. od.), is an American work deaning con-cisely with natural building stones, artificial materials, stone masonry, brick and hollow-tile work, concrete, and railway work. It is mainly meant for help in courses of instruction of those where little time is given to the subject. In regard to quarrying by machinery, American quarry owners seem considerably ahead of us, and some of them who do not know it might read the volume with advan-

The strength of sand-lime brick, states the Canadian Engineer, depends upon a firm bonding of the sand grains through the agency of lime. A mixture of sand and lime is pressed into bricks, which are then subjected to the action of steam under pressure for several hours. A chemical union takes place between the lime and the quartz of the sand, forming hydrated calcium silicate. The sand used should not be too coarse. That passing through a twenty-mesh screen and composed of grains ranging in size down to minute particles is desirable. In other words, the sand grains should be so graded in size as to leave very little interstitial space. The strongest bricks are made from sharp sand which is free from inert minerals. saler sand which is the from their inheritances such as clay, iron oxide, mica, etc. The clay and iron oxide are particularly objectionable, since they are liable to mask the grains of quartz and thus prevent the union of the line and quartz. Ten per cent of clay substance should be set as the extreme limit. Feldspar is less objectionable, but it large proportions is undesirable, as it reduces the strength of the brick.

#### CHIPS.

The urban district council of Llanfrechfa have appointed Mr. M. R. Jones, of Abergele, as surveyor and inspector,

Mr. Thomas Nisbet has been appointed to the joint offices of master of works and city engineer by the Glasgow Corporation.

The Local Government Board have given their sanction to an application by the urban district council of Surbiton for permission to borrow £4,875 for sewerage works.

Alderman Owen Ridley, of C.well House, Craven Road, Reading, formerly head of Ridley and Sons, timber merchants, and twice Mayor of Reading, died on April 28, aged 77, Ieaving £60,496.

The city council of Sheffield have made application to the Local Government Board for sanction to prepare a town-planning scheme for Hillshorough, Malin Bridge, Stannington, and Crookes.

The Tolhurst Memorial Roman Church at Northfleet has been formally opened. The new building forms a striking feature on the hill, and has been erected from the designs of Mr. G. Gilbert Scott by Mr. J. B. Lingham. The contract amount, including the tower, was £6,436, but the actual cost reached £8,000.

At the last meeting of the Stepney Borough Council the Finance and Parliamentary Committee presented lengthy reports on the application by contractors for increases in their respective contract rates. In connection therewith they presented an estimate of £7,384. A long discussion ended in the reports being adopted.

and additions Extensive renovations Extensive renovations and additions to Newlyn East Church of England School have been carried on during the past few months at an outlay of about £1,000. The roof of the old school has been remade, and five new Boyle ventilators and five fresh windows put in. The architect was Mr. C. King, F.R.L.B.A., Plymouth.

The opening to traffic of the Leuk-Leukerbad The opening to traine of the Lauk-Laukerbad line, the latest of the Swiss mountain railways to be constructed, took place on Monday. The construction of this new electric line, just over 6½ miles long, was begun in 1912. It is mainly a tourist line, leading from Leuk, a station on the main Simplon line, to the winter resort of Leukerbad (Loèche-les-Bains). It has cost £120,000 to construct.

#### LEGAL INTELLIGENCE.

AIR RAID PRECAUTIONS PROSECT TION UNDER THE BUILDING ACT At the Guid all, on July 1. Mr. Wo ner Wheeler, of the firm of Wheeler and 8 ms, engineers, et Victoria Guidens, Notting Hill Gate appeared to answer two summenses under the Lembon Building Act, 194, for having tailed to serve a building notice on the district survivor before beginning centain work on the roof of tre North British. Assurance Company, and for having cut into certain chunny shafts and flacs for a purpose other than that sanctioned by Section 64. The defondant admitted that no notice was given, but said he was of opinion that as the work was in connection with precautions against hostile air raids no notice would be required. Mr. John T. dd, the distinct surveyor, said it was an extremely difficult matter for him to deal with. The work of protecting Cry buildings and fin menal houses must be given the utinest consideration by protecting Cry binblings and financial horses must be given the intimost consideration by every person. This was not the only case he had to deal with, but he had refrained from his daty in prosecuting in other cases in the public interests and on the principle that no more breach of the Building Act should prevent anyone in the City from doing what was reasonable to safeguard their property against our rolds. He was not request to afrome the law roisonable to safeguard their property against air raids. He was not going to enforce the law in respect of any mere technical contravention of the Act, but he felt that it would be only good cricket on the other side if they would give him every opportunity to see what was going on "Sir John Buddeley said that under the circumstances by would only impose a nominal penalty of 5s, and costs.

CONTRACTOR v. CHURCH BUILDING CONTRACTOR v. CHURCH BUILDING COMMITTEE—In the King's Bench Division, on June 29, before Mr. Justice Atkin, men ion was made of the action of Mr. A. J. C. dhorne, limbder and contractor, of Bristol and Swindon (suing through his trustee in bankrupcy) against the Rev. J. W. Jones and the Building ising through his trustee in bankrupecy) against the Rev. J. W. Jones and the Building Committee of the Annianford Church to be cover £2,540, the balance due in respect of the crection of the new church at Annianford. Mon. Plaintiff alleged that the defendants, through their architect. Mr. W. D. Jenkinshad acted wrongfully in determining the contract. The defendants set up a counterselaim for damages, and said they were entitled to determine the contract owing to delay on plaintiff's part. This was denied—His Lordship held his roserved judgment, given on June 8 (and published in our issue of the 16th ult.), that the contract was wrongfully terminated, and also gave judgment in plaintiff's favon on the counterselaim.—Mr. Morten, K.C., for the plaintiff, now said the parties had been unable to agree as to the amount due to plaintiff. After hearing counsel's arguments, his Lordship said the best thing would be for the parties to appoint a quantity surveyor. Unless they are all the best thing would be provided in the pagest. to appoint a quantity surveyor. Unless they agreed within seven days to give him a name he should ask the President of the Surveyors Institution to name a gentleman, and he this

lordship) should nominate him.

GROVER A. HOPKINS A. CLOSING ORDER AND LIABILITY FOR RENT - Be fore his Homour Judge Stully at the Watford County Court, last week, the adjourned hearing took place of a case in which H. Grover, Upton Road, Watford, sued James Hopkins for two quarters' rent of a house in Cassio Road. It was stated that the premises had been closed by an order of the local authority owing to their condition. At the first hearing Mr. S. J. Ellis, for the plantiff, admitted that it was a hard case, but Mr. Grover, who held the premises under a lease, was in a similar position. There was no agreement on the part of the landlord to repair. His Homour now said that he wanted further information as to the ground on which this house was condemned. lordship) should nominate him. the ground on which this house was condemned

the ground on which this house was condemined. Mr. Ellis said that the damp course was defective through neglect. Plaintiff explained that the stuff used in the damp course was rot as it should have been. The stuff allowed to be used would not last more than a certain number of years.—Mr. Ellis. The damp course was made with material which was all yeal by the urban district council when the house was the urban district council when the house was hard. This material was not now all well as the council had some orner approved material. He also said that the will also with earth. ### Correspondence,

#### HAYWARDS, LIMITED.

To the Editor of The Building News.

SIR,—We beg to inform you that, with the consent of the Board of Trade, the name of this company has been altered to "Haywards, Limited, by which title it should be known and addressed in future. Our Mr. Wm. Eckstem and bis family are English of several generations back, and he has served many years in the Public Works Department of India; but it has been suggested by several of our principal chents that, owing to the present state of public feeling in connection with the war, the retention of his name in the firm may mislead some of our correspondents and cause them to imagine there is some German interest in the business. As a matter of fact, the firm is entirely a British one, founded in 1783, registered as a joint stock company in 1896, and it has no connection, directly or indirectly, with any German or Austrian interests.

All the business of the company will be conducted as heretofore, and various contracts for Government work are being carried out, but inquiries and orders will be attended to with all care and promptitude.-Yours faith-

Haywards, Limited, Geo. F. Pittar, Director.

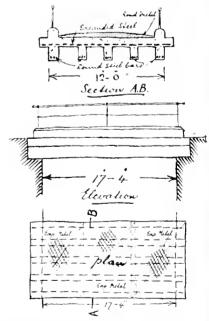

187 to 201, Union Street, Borough, London, S.E.

Not one of the countless clients of Haywards. Limited, is, we know well, in the least likely to have fancied there was anything German about the firm or Mr. William Eckstein, who is one of the most typical Britons living. May the change herald increased prosperity, and add, if possible, new customers among those who might not have known it.—ED. B.N.]

#### THE L.C.C. REGULATIONS FOR REINFORCED CONCRETE.

The London County Council Regulations for Reinforced Concrete Construction ...

The London County Council .. ..

Protection of Unfinished Concrete ... Correspondence .. .. .. .. .. Professional and Trade Societies ...

On July 6, 1915, the London County Council. under the authority conferred on them by Section 23 of the L.C.C. (General Powers) Act, 1909, formally made draft regulations with respect to the construction of buildings wholly or partly of reinforced concrete. The preparation, consideration and discussion of these regula tions appears to have progressed steadily and continuously from August, 1909, when the L.C.C. (General Powers) Act came into operation, up to July, 1915.

It is generally known that whereas the Council are required by law only to give notice to certain Technical Institutions of their intention to apply to the Local Government Board for allowance of the regulations, the Council have nevertheless consulted the Technical Institutions at all

stages of progress.

The intermediate drafts that have been available appear to show that at some stages the criticism has been in the direction of greater stringency and at other times in the direction of greater elasticity in the use of the material. It is a remarkable fact that the net result of all the criticism has justified a reversion towards the standard of stability of the draft first submitted to the Technical Institutions.

For ordinary heams and pillars, and for concrete mixed in ordinary proportions, the final standard of stability coincides with the Council's initial standard; but in the case of slender pillars and richer mixtures of concrete the amendments would appear to be in the direction

of somewhat greater caution.

Considering the extent to which the regulations have been discussed in the technical Press and at the committee meetings of the Technical Institutions, and the efforts which have been made to make a consistent and harmonious whole out of suggestions, which must, by the necessities of the case, often have been mutually contradictory, we are of opinion that the Council are to be congratulated on having made regulations which appear to meet the requirements of both the designer and those who are required to supervise the design or the actual execution of the work.

The standard of stability would appear to be in accord with the best general practice, and no impossible ideal has been set up in the requirements as to the ulti-

mate strength of the concrete.

We note that the formulæ are given in more than one form, and useful approximations to the results demanded are

methods of design. Take, for example, within the reach of all. We give them the bending moments on beams. The designer is free to follow any one of three courses :--

- (1) To arrive at the maximum bending moment by a simple rule which does not discriminate between the ratio of the dead to the superimposed load.
- (2) To arrive at the maximum bending moment by a simple equation which does take into account the ratio of the dead load to the superimposed load.
- (3) Notwithstanding anything contained in the previous rules, beams may be designed for the exact positive and negative moments which will occur at every cross section, whether all the spans be loaded or alternate or any of the spans be unloaded.

This affords sufficient latitude for every

practical purpose.

The question of a variable modular ratio is one to which we specially invite our readers' attention. It is obvious that the richer the concrete the stronger it is and the nearer its elastic modulus approaches the elastic modulus of the steel. There-fore, the ratio of the two moduli must vary with variations in the strength or proportions of the concrete. It is sometimes urged that a variable modular ratio brings complexity into the calculations, and the regulation may be criticised on these grounds. On the other hand we have seen some of our contemporaries object to a fixed modular ratio. However, seeing that the variable modular ratio is introduced in such a manner that mc is constant, it follows that variations in the proportions of concrete will not have that effect on the position of the neutral axis which might be expected in the first instance. The modular ratio is varied in such a manner that the calculations will be simplified rather than made more com-

It should be realised that designers need not use the long orthodox rules for the resistance moment of beams if they will calculate, once and for all, the values of Q for their favourite mixture of concrete (vide Regulations 87 and 88). If this is done, the calculation of the resistance moments of reinforced concrete beams is scarcely more complex than for a simple building shall be used for conducting electionless beams.

timber beam. We are glad to see this question at last so crystallised that this construction can be utilised in London, and a well-considered set of regulations given as a guide. The more one considers the quesgnide. The more one considers the question, their initiation and the subsequent sifting they have undergone, the more sifting they have undergone and patience to give encouragement to scientific of those who have brought these rules form part of the regulations.

fully, and are certain that their careful consideration will facilitate the use of this system of construction as it should be employed in London, under the direction of competent designers, assisted by regulations which bear the visible impress of technical skill unhampered by tendencies to create difficulties which are sometimes characteristic of the official mind.

## ---THE LONDON COUNTY COUNCIL REGULATIONS FOR REINFORCED CONGRETE CONSTRUCTION.\*

#### PART I.

GENERAL - REINFORCED CONCRETE DEFINED.

1. The term "reinforced concrete" as occurring in these regulations shall mean concrete which is reinforced by metal so combined therewith that the metal will (a) be sufficient to take up all the tensile stresses; (b) assist in the resistance to shear; (c) assist in the resistance to compression where neces

2. These regulations shall apply only to the construction of buildings of reinforced concrete in which the loads and stresses are transmitted through each story to the foundations by a skeleton framework of reinforced concrete or partly by a skeleton framework of reinforced concrete and partly by a party wall or party walls.

#### Skeleton Framework.

3. The skeleton framework of reinforced concrete of a building; together with the party wall or party walls (if any) upon which such framework bears shall be capable of safely and independently sustaining the whole dead load and the super mposed load bear ing upon such framework and party wall or walls, calculated in accordance with the data hereinafter contained

FLOORS, STAIRS, ROOFS, EIC

4. All floors, stairs, landings, and other portions of a building carried by a reinforcial concrete framework shall be constructed throughout of incombustible materials, and be carried upon supports of incombustible materials; nevertheless, all internal stairs and landings may be constructed of fireresisting materials, and nothing in this regulation shall prevent the use of wood framing, boarding and battens in the construction of

ELECTRICAL CURRENTS.

### NOTICE'S AND PLANS.

In the case of the erection of a new building of reinforced concrete or the making of any addition or alteration or the making of any addition or alteration or the carrying out of other work under the provisions of these regulations, the like notice shall be served upon the district surveyor as is re-

ga red to to served by Part XIII Lond to Bounding Act, 1894, and such notice shall be accompanied or in the case of a new be and suparmed. shall, the accompanied. In the case of a new building by plans and sections of sufficient detail to show the construction thereof, to gether with a copy of the calculations of the loads an istresses, to be provided for and purgetter with a copy of the calculations of the coads an istresses to be provided for and particulars of the materials to be used; and should such places sections, calculations or particulars as rightally furnished be not in sufficient licial, the person depositing the same should furnish the district surveyor with such further plans, sections, calculations or particulars as may be reasonably necessary for the afreship purpose, and the classes or the af resale purpose, and 7 of an alteration or addition or other work as aforesaid by such plats, se tions, tions and particulars as may be reasonably nes : 88373

#### PART H

DATA TO BE USED FOR THE PURPOSES OF THESE REGULATIONS.

Fi + and B of Lad.

#### DEAD LOAD DEFINED

The lead lead of a building still consist of the actual weight of walls, floors, stairs, landings, resids and all other permanent con-struction comprised in such landding

#### SUPERIMPOSED LOAD DEFINED.

8. The superimposed road in respect of x bunding shall consist of all loads other than the dead load.

#### LOADS.

9. In calculating the loads on foundations. llars, piers, wans, framework, beams and other constructions carrying loads in build tags, the super.mp sed load shall be estimated as equivalent to the dead load set forth in the regulations following, and numbered 10 to 24. both inclusive.

#### FLOOR LOADS.

10. For a floor the estimate shall be made in accordance with the table immediately following:-

#### LOADS ON STAIRS AND LANDINGS.

11 For stairs and landings the superim peed and small be estimated as equivalent a notificate i dend land of at least 120 for a torogram feed but each step shall that of safety supporting a concentrated as at a 1, post of not less than 300 lb.

#### Late on Room

Let's on Roots la Forage and a grader area than twenty terress with the herizontal, the superimposed all which shall for this purpose be deemed to not be with herizontal, the superimposed to not be with pless are and weight of show at the shall be estimated at 25 No. per First feet of slepant surface of runal to such elotic surface of which elot of such roof.

13. For all other roofs the superimposed load shall be estimated at 56 No. per square for measured of the superimposed.

#### GREATER LOADS.

14 H the superimposed load on any floor, an ing, stars or roof is to exceed that hereinbefore specified for such floor, landing, stairs or roof, such greater load shall be provided for with an equivalent margin of safety.

#### LOADS NOT OTHERWISE SPECIFIED

15 In the case of any floor or roof intended to be used for a purpose for which a super imposed load is not specified in these regulations, the superimposed load to be carried on such floor or roof shall be provided for with an equivalent margin of safety.

#### ROLLING LOADS.

16. In cases where a rolling load actuated by mechanical power is to be provided for such rolling load shall be taken as equivalent to a static load 50 per cent, in excess of the The positive and negaactual rolling load. tive bending moment at every cross section due to every position of the rolling load shall be properly provided for.

#### PARTITIONS.

17. Partitions and other structures super-imposed on floors and roofs may be included in the super, mposed load, provided the weight of the partition or other structure per square base does not exceed the permissible load per square foot of floor or roof area. Partitions and other structures of greater weight shall be specially provided for.

#### Angle of Dispersion.

13. For calculating the resistance moment the angle of dispersion of a point load through hard filling and concrete shall not be taken at more than forty-five degrees from the vertical.

#### LOADS.

19 For the purpose of calculating the total load to be carried on foundations, pillars and walls in buildings of more than two stories in height, the superimposed loads for the roof and for the floor of the topmost story shall be calculated in full, but for the floors of the lower stories a reduction of the super imposed loads shall be allowed as follows :-

For the floor of the story next below the topmost story a reduction of 5 per cent. of the superimposed load on the floor of that story, as calculated in pursuance of the forezoing regulations, shall be allowed; for the floor of the next story 10 per cent, of the superimposed load on the floor of that story similarly calculated; and so on by increments of 5 per cent, per story till the reduction amounts to 50 per cent. It shall be It shall be taken at 50 per cent. per story for all floors below.

20. No such reduction as aforesaid shall be allowed in the case of a building of the warehouse class

#### Wind Pressure.

21. All buildings shall be so designed as to resist safely a horizontal pressure equivalent to a static pressure of not less than 20 pounds per square foot of the whole projected surface normal to the direction of every wind.

(For pressure on panels of external walls

see regulation 130.

All structures or attachments whatsoever in connection with a building, including towers or other parts which extend above the roof, flat, or gutter adjoining thereto, shall be so designed as to resist safely a horizontal pressure equivalent to a static pressure of not less than 40 lb, per square foot of the whole projected surface normal to the direction of every wind.

#### Working Load.

23 The working load shall include the superimposed load ,and the dead load inclusive the weight of the beams, slabs, pillars, or other members, and any plastering, tiles, mosaic. granitic or other similar finishing materials.

#### Weight.

24 For the purposes of calculation, the average weight of reinforced concrete, to gether with any finishing materials as aforementioned, shall be taken at not less than 144 lb. per cubic foot measured over finished surfaces.

#### Ratio of Span to Depth of a Beam.

25 For the purpose of determining the ratio of span to depth of a beam, the effective depth of the beam shall be taken.

26. The effective depth shall be measured from the compressed edge of the construc-tional concrete to the common centre of gravity of the tensile reinforcement.

The ratio of the span of a beam to its effective depth shall not exceed the lesser of

the two following ratios :-

20 tersile stress in regulation 43 actual maximum tensile stress OΓ

#### 20 · compressive stress in regulation actual maximum compressive stress

28. The length of a cantilever shall not exceed five times the effective depth at the bearing.

Bonding Moments.-Effective Span.

29 For the purpose of ascertaining the bending moments on a beam or on a slab, the effective span and the whole load on the effective span shall be taken into account in the calculations.

30. In the case of non-continuous beams or slabs, the effective span shall be taken as the distance between the main vertical sides of the piers, pillars, or walls, plus the effective depth of the beam or slab at the supports, or the span between the centres of the necessary bearing surfaces, whichever may be the lesser.
31. In the case of continuous beams or slabs

the effective span shall be taken as the clear span plus the effective depth of the beam or slab, or the length between the centres of the supports, whichever may be the lesser.

#### FIXED ENDS DEFINED.

32. A beam or slab shall be deemed to have secured to other parts of the construction having such rigidity as will maintain the neutral planes of the beam at the ends in their original positions and directions under all variations in the incidence and intensity

#### MAXIMUM MOMENTS.

53 The bending moments to be provided for at every cross-section of a beam or of a slab shall be the maximum positive and negative moments at such cross-section. Such maximum bending moments shall be calculated in a manner consistent with regulations 34, 35, 36, 37, and in accordance with regulations 38 and 39.

34 -- BEAMS WITH ENDS FREE OR FIXED. Notation for bending moments.

B = bending moment.

b = breadth,
 l = length of effective span.

W = total weight or working load.

Supports. Load. provided for. Concentrated at Cantilever . B = -Wl at fixed end.

Uniformly distributed fixed B =  $-\frac{Wl}{8}$  at ends.  $B = -\frac{Wl}{8}$  at ends.

Uniformly distri Both ends Bat centre shall not be buted tixed taken at less than taken at less than the numerical value of B at the ends.

Uniformly distri One endfixed buted One endfixed buted One endfixed one end B =  $\frac{Wl}{8}$  at fixed end. Freely supported One endfixed buted One endfixed freely supported Freely supported from the free end.

#### CONTINUOUS BEAMS.

Notation for Bending Moment.

35 B = bending moment.

35.—B bending moment.

= length of effective span measured between the centres of supports. (See regulation 31).

W = total weight or working load. (Superimposed and dead loads.) regulation 23).

 $W_d = \text{total deadweight per span}$ .

Ws = total superimposed weight or load per span (uniformly distributed).

The total bending moment (B) to be provided for at every cross section shall be the algebraic sum of the bending moments due to the superimposed and dead loads respec-

Maximum bending moments due to variet one in the incidence of distributed loads over approximately equal spans.

Near Middle of End Span.	At Support Next to End Support.

+ -12 + -24	9 12
or approximately W l	or approximately Wt
+	- 10

36. Notwithstanding anything in regula-tion 35, beams may be designed for the exact positive and negative bending moments which will occur at every cross-section whether all the spans be loaded or alternate or any of the spans he unloaded.

#### BENDING MOMENTS ON SLABS.

37. (a).—Bending moments on slabs supported by, fixed at, or continuous over four edges, shall be calculated as for beams.

(b) When reinforced with mesh reinforce-

ment or reinforced in two directions at right angles to each other, the load assumed to be carried in each direction may be appor-tioned as follows:—

Proportion of load assumed to be carried in the direction of the breadth of the slab-

$$= \frac{1}{1 + \left(\frac{b}{l}\right)^4} \times \text{ total load on slab.}$$

Proportion of load assumed to be carried in the direction of the length of the slab-

$$= \frac{1}{1 + \left(\frac{l}{b}\right)^4} \times \text{ total load on slab.}$$

Provided that when the length of a slab exceeds twice its breadth the whole load shall be assumed to be carried in the direction of the breadth of such slab.

#### Moments over Supports.

38. The maximum area of steel required to take the negative hending moment at any support shall be carried without reduction across the centre of that support. (Also see regulation 35.)

#### VARIATIONS OF LOADING.

39. To allow for variations in the incidence of the loading on contiguous spans of continuous beams or slabs, the bending moments to be provided for at every cross-section shall be the maximum positive and negative moments at such cross-section, whether all the spans be loaded or alternate or any of the spans be unloaded.

CONDITIONS OF LOADING NOT OTHERWISE Specified

For every condition of loading not specified in these regulations, the bending moment for beams or slabs shall be calculated so as to give an equivalent margin of safety.

REINFORCEMENT AT POINTS OF CONTRA-FLEXT'RE,

41. Reinforcement shall be carried beyond the points of contraflexure under any condi-

tion of loading, by a length at least equal to half the effective depth of the beam.

#### Working Stores.

42 (a). Also see regulations 145, 148, 156, 157, 158, 159, 162. Except as further provided for in pillars, the permissible working stresses in concrete shall not exceed the fol

### Hooks AND ANCHORS

48. (a) All tensile and shear to notice a shall be hooked or other tise etter to a chored at each end

(h) Hooks at the ends of hars shire to (b) Hooks at the ends of bars ship to a ⊃ form, and shall have an inner moter of at least four times the diameter of the bar; or when the book his over a non-reinforcing bar, the diameter of the co-may be equal to the diameter of such bar. The length of the straight part beyond the end of the curve shall be at least four time-the diameter of the bent bar.

(c) When the bars are an hored it each end by means other than a hook complying with paragraph (b) of this regulation, the anchorage shall be bent up to a right angle from the centre line of the bar. The width across such anchorage shall be at least throtimes the normal diameter of the anchored bar. (Also see regulation 139)

#### Grip Lougth.

49. The grip length or adhesion length of a har embedded in concrete shall be measured along the bar from the beginning of the curve of the hook or the nearer end of the other form of anchorage.

other form of anchorage.

50. The grip or adhesion length shall be sufficient to keep the stresses within the limits set out in regulation 42, except for web reinforcement complying with regions 43 (b) and 67.

51. For the purpose of ascertaining the necessary grip or adhesion length in the case of a bar having mechanical bor it to purpose of a bar having mechanical bor it to prejudent of the har may be measured by the stressery of the har may be measured by the stressery of the har may be measured.

perimeter of the bar may be measured bur the transverse projections, provided

(a) That the transverse project as an not further apart (centre to centre than twice the normal diameter of the bar:

(b) That the height of such project one above the normal surface of the bar sibe at least 1 10th of the dameter of the bar.

#### Modular Ratios

MODITAR RYDOS

52. The term "modular ration of the state modulars of state to the elastic modulus of the concrete state modulus for steel of the elastic modulus for steel of the sion or compression shall be taken at 75 yr million pounds per square in his second tation 80 (c) 1.

54. The modular ratio for steel of the crete shall be taken is follows second of \$83 and \$141.

83 and 114)

9.000 : For beams ....

For pillars with the minimum of heeping or binding ..... 11 c 9,000 or r.

For pillars with more than the minimum 9,000 of hooping or handmg..... 9 000 crm

Where c - permissible compressive working stress given in regulation 42 and i ncreased stress given by regulation 115

#### PART III Beams.

55. The term "beam shall include any beam, girder, lintel, bressummer, or cantilever, or any other similar member carrying transverse loads.

#### Dignains of Bars.

ist grameter or thickness of the Lagradia a bars in beams shall not be less than one marter of an inch

All other reinforcements in beams shall be at least one eight i of an inch in diameter

#### SIA E BEIWIEN BARS.

58. There share be a distance of at least the orange recentary and one half inch ver-tion, y between the bars in brains except at Justs of at Joints where the bars are in direct costa t and tripsverse to one another

direct coda t and tripsverse to one another, 52. The distance between the lars of the tension remice ement in a beam shall not be greater than six means.

#### Whileso

60 Willie used in beams for the pair p - of h ding bars in position shell not be regarded as remion ement.

### Compression Reinterement

61. In cases where the compressive resist anecost the concrete is taken into account the stress in the compressive remiorcement may be taken at an amount not exceeding me times the stress in the concrete at the same distance from the neutral axis on condition

a. The compressive reinforcement is anchored by bars extending at least through a depth equal to the arm of the

res stance moment.

b) The anchors are spaced not further apart pointre to centrel than a distance equal to the arm of the resistance noment, and not further apart (centre to centre) than 16 times the least diameter of the anchored bar (Also see regulations 39 and 90.)

62. In cases where the compressive resistance of the concrete is not taken into account the stress in the compressive reinforcement may be taken at 15,000 pointly per square

in homeometrion that—

a Sath ion, steel is provided to take up the whole of the compression. (b) The compressive reinforcement is anchored laterally and vertically by anchors not further apart (centre to centre) than 6 inches and not further

apart centre to entire) than 8 times the fameter of the anchored bar. or howed over both the compressive and

the tensile remiorcement.

#### HOOPED CORE.

 $\ell \in \mathbb{N}_H \longrightarrow \infty$ where the concrete in compress, in is begind at the ends of a beam, the stress within the hooped core, for the distance of one quoter the span of the beam at each end, may be taken at the same value as for a core in a pillar similarly hooped. In this case the compressive stress in the con-rete outside the hooping shall not be taken into account in estimating the compressive resistance.

#### Shear or Web Reintoreement

64. The vertical shear taken by the concrete easy will be calculated on the compressed area of the web or on the web area for a depth equal to the arm of the resistat e moment of the beam. The intensity of the shearing stress shall not be greater

the shearing sites shall not be greater than the values given in regulation 42. +5. Where the vertical shear is taken by the concrete only, in accordance with regu-tation 64, the ends of 50 per cent, of the bars

to 6.44, the ends of 50 per cent, of the bars to tensive reinforcement shall be intied a ross the neutral plane of the beam, it said be arried through a depth equal to a ros of the resistance moment, or the finite factors and be carried through the critical through the critical factors. See regulations

66. It the decrine stress at any cross section of a tell in the on rete alone, is in the confidence of the return The control of the first of the straining stress, the tensile to instance of the control of which the compressive stresses is the web but in no case will the rule  $\frac{1}{h_1}$  a exceed three

times the shearing stress given in regulation 12 a. shere

beam or the breadth of a rectangular beam:

effective depth of the beam; total vertical shearing force at any cross section.

(A<sup>1</sup>so see regulation 84)

67. Shear or web reinforcement shall-

(a) Be spaced according to the distributton and intensity of the shearing stresses, but the distance from centre t) centre of the shear or web members at any part of the beam shall not exceed a length equal to the arm of the resistance

(b) At least extend from the centre of the tensile reinforcement to the centre pressure in the concrete under com-

(1) Be passed under or round the tensile reinforcement or be otherwise

se ured thereto.

(d) Be booked at both ends, in the same manner as for tensile reinforcement, or equally effectively anchored.

68. Tensile reinforcement which is inclined across the neutral plane of a beam. and which is carried through a depth equal o the arm of the resistance moment may be tiken as shear or web reinforcement.

69 The shear or web reinforcement may be regarded as anchors under the regulations 61 and 62, provided it complies therewith.

(To be continued.) >000

#### THE LONDON COUNTY COUNCIL.

At their meeting yesterday (Tuesday) afternoon, the London County Council formally confirmed, as required by Section 23 (3) of their General Powers Act, 1909, the regula tions with respect to the construction of buildings wholly or partly of reinforced concrete and with respect to the use and composition of reinforced concrete in such construction, made at their meeting last week, referred to in our last issue, pp. 4, 5, and also above, in this number. The Building Acts Committee reported that they had had under consideration the question of the position of Mr. J. D. Mathews, district surveyor for the district of Stoke Newington, who was appointed by the Metropolitan Board of Works in 1874. In November, 1914, the committee interviewed Mr. Mathews, who was then seventy-rix years of age, and formed the opinion that his retirement should not be long delayed. In order that he might have an opportunity of making any necessary arrangeents, the committee suggested that he should submit his resignation to take effect as from November 50, 1915. Mr. Mathews had not, however, adopted that suggestion, and the committee now felt, therefore, that they had no alternative but to recommend the Council to dispense with his services as from the date mentioned. They recommended "That the services of Mr. J. Douglass Mathews, district surveyor for the district of Stoke Newington, be dispensed with as from November 1915." They had also had much They had also had under consideration the question of the position of Mr. F Wallen, district surveyor for the district of St. Paneras, South. Mr. Wallen was appointed by the Metropolitan Board of Works in 1878, and is now eighty-four years of age. The committee interviewed Mr. Wallen in November, 1914, and were satisfied that it was desirable in the public interest that he should be relieved of his duties. In order that he might have an opportunity of making any necessary arrangements with a view to retirement, they suggested that he should appoint a qualified deputy forthwith and should submit his resignation to take effect from November 30, 1915. Mr. Wallen had appointed a deputy, and the committee agreed to the appointment on the understanding that it will continue for so long as Mr. Wallen remains district surveyor, but not after remains district remains district surveyor, but not after November 30, 1915. Mr. Wallen had not, nowever, submitted his resignation, and they felt, therefore, that it was incumbent upon them to recommend the Council to dispense with his services as from the date mentioned They recommended "That the services of Mr. Frederick Wallen, district surveyor for

mean breadth of the rib of a tee the district of St. Pancras, South, be dis-

pensed with as from November 30, 1915."

Owing to the demands of the military authorities, the contractors have not been able to complete the Council's last order for motor appliances for the Fire Brigade. The Fire Brigade Committee submitted an estimate of £25,665 for the purchase of ten motor fireengines, seventeen motor fire-escapes, and a motor-lorry, pointing out that it has become increasingly apparent that the efficiency of the Fire Brigade must be maintained at a high standard during the period of war. Fire Brigade Committee added that in view of the conditions arising out of the war they had decided that no building work at firestations involving capital expenditure, except works already in progress, shall be proceeded with until further order. This decision in with until further order. volves the postponement of the extension of the Euston station, of the building of a new station in substitution for the Tooley Street station, and of the enlargement and improvement of the Kennington station. They had also given instructions that the usual painting work at fire stations is not to be carried out during the current financial year, that only repairs which cannot be delerred are to be executed, and that certain proposed works of a minor character at fire-stations are not to be put in hand at present.

No proposals are to be submitted to the Council for the construction of new tramways, and the Highways Committee recommendation mended that application be made to Parliament for an extension of the time allowed for the construction of the junction lines from Farringdon Road into Clerkenwell Road, from Battersea Park Road into Battersea Bridge Road, from Southeroft Road into Mitcham Road, the transways in Bridge Road, Hammersmith, and the junction line from the Broadway, Hammersmith, into Bridge Road.

The Improvements Committee reported negotiations with the Hammersmith Borough Council with regard to (i.) the proposed formation of a new road between Old Oak Road and Old Oak Common Lane; (ii.) the continuation of such road by the addition to the public way of land partly outside the county belonging to the Goldsmiths' Company; and (iii.) the widening of Old Oak Common Lane south of Ducane Road. The total cost of the works involved in the execution of (i.) and (ii.) is estimated by the borough council at £1.365, and the cost of the works necessitated by the third improvement is estimated at £550, making a total of £1,915. The Ecclesiastical Commissioners are prepared to give up the land required for (i.) and (iii.) and to contribute £400 towards the cost in the case of (i.). On this basis the cost of the improvement may be estimated at £1,515. The borough council states that the work is one of urgent public necessity, and the Ecclesiastical Commissioners are very anxious that the work should be completed before next winter. The committee recommended the Council to contribute £1,000 towards the cost of the improvements which will thus be effected forthwith on the basis of no payment being made by the Council until after the conclusion of the war, with interest at the rate of  $4\frac{1}{2}$  per cent, from the date of completion of the improvement.

Mr. Courtenay Clifton held a Local Government Board inquiry at Hadleigh, West Suffolk, on Monday, into an application by the Cosford Rural District Council for sanction to borrow £1,200 for a housing scheme.

The directors of the Ulster Publichouse Trust Co. have opened a large new hall at the Templetown Arms. Templepatrick, to be called "St. Patrick's Barn." All the old features of an Ulster barn, including an external staircase, have been preserved and every modern accommodation added. The builders were Messrs. Kirkpatrick Bros., of Muckamore. more.

Mr. W. O. Meade-King, an inspector from the Local Government Board, held an inquiry at the Town Hall, Wednesbury, last week, respecting an application by the town council for sanction to the borrowing of £1,350 on account of the extensions of the municipal offices and public baths and the erection of new education offices. The application was unopposed. unopposed.

### TIMBER IN BRITISH NORTH BORNEO.

The Government of British North Borneo is taking steps for a general survey of the timber possibilities of the country, and, for the purpose of estimating the amount available and classifying it into the various kinds suitable for export, Mr. D. M. Matthews, an American forestry expert, formerly in the Forestry Service of the Philippines, has been employed. According to a report by the United States Consul at Sandakan, Mr. Matthews began his duties in December, 1914, and is now proceeding with the work of classification.

North Borneo is covered with forests. On account of the dense vegetable growths of all kinds in the tropics, the word "forest" is seldom used; instead, the word "jungle" is commonly applied. In "jungle" is commonly applied. In British North Borneo the entire coastline is an unbroken jungle of nipa palms and mangrove trees, but the higher ground is covered with many kinds of forest trees, particularly rare hardwoods, which it is the intention to convert into timber for export. These hardwoods are of many kinds, and can be used for many purposes.

A peculiar feature of several best-known woods is the dual formation—a soft outside of a few inches covering a heart of hardwood. usually black. Several trees have sand-coloured and reddish woods—very similar to the so-called California redwood.

The most valuable of all Borneo timber is billian, or ironwood. This is an extremely hard timber, sand-coloured when newly cut, but it darkens with age. It is so heavy that it sinks in water, and for that reason cannot be rafted down the rivers. About 2 in. of the outside of the tree is soft and worthless, but the inside can be used for almost any practical purpose where a strong, solid, and durable wood is required. It is particularly in request for building purposes in the tropics because it is ant-proof.

Another valuable hardwood is russak or selangan batu. This is a dark sand colour and has many of the properties of billian wood, though it is not so heavy nor does it take so high a polish. Billian is more like reddish-brown ebony, if the description may Billian is more like be allowed. Russak is used for general building purposes, but is preferred for posts and piles for wharves, beams for houses, and all kinds of heavy framework. It is an adall kinds of heavy framework. It is an admirable wood for interior finish in halls and churches, for wainscoting and panel woodwork. The supply is practically unlimited.

The next common timber is sirayah, or redwood, a comparatively soft wood, very similar to California redwood. Sirayah puteh is a whitewood closely resembling American yellow pine. Sirayah proper is so easily worked that it is in very common use. For hardwood sirayah is in great demand.

A very valuable timber is known by the local name of urat mata. It is a dark-red

colour, grained, not dissimilar to American mahogany, and much desired for shipbuilding, masts, and planks. It is very durable, and impervious to ants and other insects. The Malays prefer this wood for the bottoms of

their boats.

Greeting is a wood closely resembing Indian ebony, though the black inside is sometimes relieved by streaks of brown or red. It may be used for all fancy and decorative purposes, including furniture, though rative purposes, meaning rational free it is almost as heavy as billian. Greeting is a good imitation of English black oak, and might even take the place of walnut. In a might even take the place of walnut. In a new country it is the first wood to disappear.

Another wood similar in texture and grain to greeting is rungas, a dark-red wood with a black stain. The heart is a beautiful dark red. Two or three inches of the outside are soft and worthless, but the inside has all the qualities of the most desirable hardwood. is durable, impregnable to insects or the elements, and takes a high polish. It is not so heavy as billian or urat mata, as it floats. This wood is not found in forests, but grows It is found all over as isolated trees. Borneo.

cis

Other timbers valuable to the export trade are camphor wood, mirabow, and chindana. These woods all have a more or less agree-

able scent, and are fine grained and durable They are in great demand in Hong Kong for the inside finish of wardrobes, chests, bureaus and all wooden furniture intended to contain clothing. These woods are also adapted for fine building purposes and furriture. In the tropies they are used for stairways, doors, window-frames, and finishing work generally.

The cost of procuring timber is not great. The system in vogue near Sandakan is to fell the timber, using Clanese coolies, and raft it down rivers to the bay, where it is loaded into lighters, which go alongside the big steamers and discharge.

It is claimed that the supply of nearly all kinds of timber in British North Borneo with last hundreds of years. At present two com-panies only are engaged in the export timber trade. The entire supply goes to Hong Kong. -----

#### PROTECTION OF UNFINISHED CONCRETE.

The use of concrete during the winter months has always been attended with more months has always been accended with more or less danger, and opinions are divided as to the advisability of placing concrete in freezing weather. Mr. Leonard C. Wason, president of the Aberthaw Construction Compresident pany, of Boston, Mass., in a paper read before the Boston Society of Civil Engineers, gives a number of interesting items which he has found during his experience in that line. It seems to be generally considered that concrete laid in winter months will be exactly as good as that laid in summer-and possibly more so-if the necessary precautions to pro-

The aggregates must be free from frost when mixed. A live steam pipe should be shoved into the sand pile, the escaping steam heating it and removing all frost. The same may be done with the stone; but a canvas should be thrown over the top of the pile to retain the heat, which more readily escapes. When a considerable amount of heating is provided for in advance, steam pipes are laid on the ground, and stone as received is dumped upon them. Then there is a canvas thrown over to prevent storms getting into the pile, and to retain the heat. The frost is thus easily and economically removed.

Salt is frequently used in the water to lower its freezing point. It is seldom worth while to heat the water itself. Little care need be used to prevent mass concrete from freezing. as the frost will usually only strike to a depth of about one inch. Buildings are inclosed with tarpaulin tied on to an outside staging. and the inclosed space is heated with salamanders burning coke. Sometimes it is possible to use steam.

Frost is removed from work by the use of salt and steam; and if the concrete surface is left rough, it is common to sprinkle the top surface with salt to prevent freezing. winter it is very common to put the finish on as a separate operation, after the building on as a separate operation, are the duming is enclosed, and not as an integral part of the construction, on account of the danger of freezing. After it is put on, it must be kept from freezing for the first 48 hours.

The expense of protection against the weather is not very great, and good results can be so surely guaranteed that it is not usual to discontinue work on account of cold

Occasionally it is necessary to make some provision for the protection of the men Shelter or wind shields are built in front of the benches where carpenters are making up forms, as well as around the men at the concrete mixer, whose work does not necessarily keep them warm. Where excavation is going on in the open, it is expedient to have a building with a good fire, in which the men can warm themselves when necessary, and on a few jobs it has proved to be wise to provide hot coffee free in these shelters.

The corporation of Dudley have decided to purchase tifty-five acres of land at Burnt Tree purchase tifty-five acres of land at Burnt Tree from Lord Dudley, at a cost of £14,000, for the purpose of a housing scheme. The matter has been before the town for twenty years. It is proposed to provide fresh dwellings, so as to give opportunity for closing the existing overcrowded and insanitary two-room and three-room tenements in the borough.

#### SOUTHWARK CATHEDRAL.

Sir. Your note in this week's as no on the work to the alter screen which was de heated on Monday is in some respects not quite accurate, and a few further part chairs may be of interest. The line alter screen sected be of interest. The fine altar screen erected in 1520 by Bishop Fox was early at the eighteenth century almost wholly covered by a wooden altar-piece. This was remeyed early in the last century, when the campaes and other projecting features of the screen were found to have been cut back flat, pro-sumably to allow for the woodwork.

The whole screen was very carefully restored by Wallis in 1833. His methods were, however, rather more drastic than we could wish nowadays, and there is not very much of the original stonework of the canopies, shafts, etc., now remaining. It seems clear that the three niches immediately over the that the three memes immediately discretized altar, in the bottom stage, were added by Wallis. The recent work to the screen has been to reconstruct this centre part on lines which such evidence as there was suggested, assisted by the treatment of the corresponding space in such similar screens as those at Win chester and St. Albans,

A large recess was formed above the altar for the retabulum panel, and is now filled with a rich dossal and frame, while alse we are a rich dossil and frame, while aleave are a row of small niches containing figures of the Apostles. The corbel, carrying the subject in the central niche above, was also redesigned to suit this new work. The two steps to the altar were pushed back, so that the altar now stands agains the storework of the screen. This work was carried out by Messrs, Farmer and Brindley. The two new figures of Henry I, and Edward VII. fill the Messrs, Farmer and Brindley. The two nev figures of Henry I, and Edward VII. 32 the outer niches of the hottom stage, and are the work of Messrs, T. and E. Nicholls, who also carved the other figures in the screen

C. M. OLDRID SOUTE 2, Dean's Yard, Westmassier, NW July 10, 1915

Plans have been prepared by the berough surveyor of A'dersher, Mr. F. C. Lee, for an additional block at the isolation hospital.

The Castlebar Asylum Committee have The Castlebar Asylum Committee have slopted plans by Mr. R. M. Butler, F. R. I. B.A., Kildaro Street, Dublin, for adding new pavilions, tubercular sanatorium, and bakery to the institution, at an estimated outlay of OVET £27,000.

Private Edwin Frederick Warth died at Private Edwin Frederick Warth died at Alexandria on June 25 from wounds received at the Dardanelles. Born in India in 1883, he was the youngest son of Dr. H. Warth, formerly of the Indian Geological Survey, and now residing at Arneliffe, Forest Read, Moseley. After filling important posts in Manchester and Liverpool he went to Las Palmas in the spring of last year to take up an appointment on the waterworks survey, but gave up this post in September and returned appointment on the waterworks survey, but gave up this post in September and returned home to join the Forces. He applied for a commission; but, impatient at delay, enlisted as a private, his commission as lieutenant being received after he was wounded.

### Currente Calamo.

Lord Midleton's zeal for economy in the Civil Service, which the House of Lords endorsed so readily last week, may or may not be according to knowledge as regards Labour Exchanges, of which we have never had much opinion, and which at present must be soft jobs for all engaged in the task of finding employment for out of works But with regard to the expenditure on public buildings he probably forgets that it is nearly always the truest economy. We can call to mind no Government or municipal building erected of late years which has been undertaken until the necessity for it was so patent and the proof so evident that it would be cheaper to build than to house the staffs in separate and not infrequently distant quar ters, the rents for which far exceeded the interest on the sum spent on the new struc ture, to say nothing of the delay caused in work and injury to the health of the workers. It is, for instance, at the present time a task involving some research to hunt out the various departments of the London County Council, who, except the principal officers, are located in more than fifty different offices. The makeshifts of the Post Office. again, are as unfavourable to despatch as could well be imagined, and from other branches of the Civil Service the same cry comes almost every day. One might as well denounce the outlay on the various camps absolutely needful for our new armies as cavil at building of offices for the various azencies created during the past few years which have transferred to the State and the municipalities work of all kinds that has grown a hundredfold.

There was an equal division in the House of Lords last Friday, not only on the particular merits of the income tax appeal, but also on the application of previous decisions of the House. The question was whether the Egyptian Hotels, Limited, whose office is saturated in London, were liable to pay income tax, under Case 1, of Schedule D, upon the whole of their profits, or under Case V., upon a sum not less than the full amount of the actual sum remitted to Great Britain. The company said their Egyptian business was managed by an Egyptian board of directors. independent of the board in London, and of every general meeting of the company not held in Egypt. The Crown contended that the company was resident in the United Kin rdom, that the head seat and directing power were situated in England, and that the il musts control of the company, which resided in its general meetings, was at all times exercised in Great Britain. Mr. Justice Horridge agreed with the Crown, but this decision was reversed by the Court of Appeal. Equal division in the House of Lords resulted. Folbeying the practice of the House in such cirrustances, the decision of the Court of Appel was allowed to stand. Lords Lore birr and Parms r thought the appeal ought to be allowed, and considered that the prin cyles to be applied had already been settled ir Colombian to Brown and the Sin Paulo Braz hat Railway Commany v. Carter Lord Parmour, with whom Lord Dereburn con carried, adopted Izerl Watson - reading of the effect of the Comboin decision, that every interest in the profits of trade belonging to a person who was within the meaning of the Act resident in the United Kingdom must be charged under the first case of Schedule D against twenty-five. If that had ended the if the trade was carried on either wholly or in part within Great Britain or Ireland, and would have been perfectly clear. But a

was chargeable under the fifth case if the trade was exclusively carried on in any of his Majesty's dominions outside the United King In the present case Lord Parmoon though; there was evidence that the directors of the respondents had not only the power to deal with all general financial arrangements t the company, but also exercised the power Lord Parker, with whom Lord Sumner concurred, and whose opinion prevailed, said the important point in the Colquboun case was not whether the partner had power to interfere with the trade or business, but whether he had so in fact interfered during the period for which the Crown alleged that he was assessable under Case 1. In the present case, Lord Parker said, there was an absence of any act done or directed by any person resident here in participation or furtherance of the business operations in Egypt from which the profits and gains in question arose.

The dismissal by the City Surveyor of Manchester, Mr. T. de Courcy Meade, W.Inst C.E., of three members of his staff, referred to on this page last week, was again the subject of proweek, was again the subject of pro-longed discussion by the City Council last Wednesday. The report which the Town Hall Committee presented was summarised in our last issue. It showed that the majority of the committee refused to take the view of their Special Committee of investigation that the dismissal of these men could be justified on the ground that there was no work for them to do in the City Surveyor's department; and as the sub-committee failed to find work for them in any other department it was resolved by a majority of the committee that two of the men, "with the approval of the City Surveyor, be reinstated." The statement made by Mr. Derwent Simpson, the chairman of the committee, in presenting the report last Wednesday, indicated that those who voted for this resolution regarded the dismissal of these men as a form of industrial conscription, or compulsory enlistment The whole question of the action and re sponsibility of the City Surveyor in the matter was raised by an amendment to delete the words ' with the approval of the City Surveyor," moved by Mr. Swales. If, said Mr. Swales, the City Surveyor had really been desirous, as he said he was, of cutting down the expenses of his department, he might have begun by suggesting a reduction of his own salary, which now stood at £1,400 per year. He said it was obvious that the City Surveyor had made a great blunder He had now told the committee that he could find work for these two men, and it was with that fact in mind that the committee inserted the words under discussion. The chief object of those who supported the amendment in the Council was obviously to express their disapproval of what they considered to be an attempt of an official to use his power in order to force employees of the Corporation to culist. A second point of criticism was that the Town Hall Committee in view of the City Surveyor's threat of resignation, were afraid to "say anything to him." Sir Thomas Shann and Alderman Wilson took what they described as a more charitable view of Mr. Meade's conduct, and, while admitting that he had taken too great a responsibility upon himself, contended that he had acted solely in the interests of economy. The amendment to leave out the words " with the approval of the City Survevor " was carried by a vote of thirty-five

second resolution was carried referring the question back for further consideration. Mr. Cook, who moved the amendment, did so on the simple ground that he objected to "two able-hodied pensioners on the ratepayers' fund," which, he said, would be the position if these men were reinstated. The whole subject will therefore come up again at the Council meeting to-day.

Up to this date only two churches are known in England to have more than a complete set of external crosses upon their walls. One of these is the church of Ottery St. Mary, in South Devon, where a thirteenth cross is found, possibly in honour of St. Paul: the other church is at Canington, near Bridgnorth, where there are no less than seventeen crosses on the outside, probably the result of two consecrations. Crosthwaite Church to-day is the only church known to exist with the twelve crosses as symbols of the Twelve Apostles upon the outside walls, and, according to a correspondent of the Manchester Guardian. we owe the discovery of this unique fact to Mr. F. C. Eeles, of Edinburgh, who has discovered during the past month that, in addition to the six consecration crosses that were known to exist on the exterior of the south wall, there are six other crosses hidden beneath the rough-cast on the jambs of the windows on the north wall. The whole set of crosses probably dates from 1554, in which year there were inserted Maryan windows in the fourteenth-century walls. The use of consecration crosses on sacred buildings has a long history. In the Pontifical of Egbert, Archbishop of York, A.D. 732-766, the hishop is directed to make crosses with his thumb dipped in chrism on the walls of the church. For consecration crosses according to the Roman use twelve red crosses were painted on the four internal walls of the church at equal distances, with twelve hranches of iron to hold twelve large candles. By the English use it was required that, in addition to the twelve internal crosses, there should be twelve crosses painted on the outside walls as well. Towards the end of the fifteenth century the crosses are ordered to be within circles. and in the early part of the sixteenth century orders were given to the bishop not only to anoint the crosses with chrism but to cense them as well. Whilst the crosses on the south walls at Crosthwaite are of a normal height from the ground, 7 ft. 6 in.. they vary in height on the north wall, the sculptor having apparently chosen a more important or harder stone in the window jambs. It was prohably Dr. Aldrich, of Carlisle, who would be the consecrating bishop at that time, who used the English use for the consecration of the church notwithstanding the fact that Queen Mary was on the throne, Mr. Eeles has also discovered beneath the plaster in the interior of the church seven other consecration crosses, some of them enclosed with a black line and two of them picked out with black paint. One consecration cross was previously known to exist, so that there are eight now in the interior. The other four were probably wiped out of existence when the splays of the windows were redressed in 1844.

Careful scientific investigations are being carried out in Queensland in accordance with the Rights in Water Act. The State has been divided into two divisions one lying north of the Central Railway, and the other to the south. Each division is under the control of an assistant hydraulic engineer,

who has a district engineer stationed at Win ton and Charleville respectively. Under the district engineer in the southern division are three hydraulic surveyors with working staffs, two bore-drain surveyors, two bore inspectors. and three overseers. In the northern division are two hydraulic surveyors, two levellers, two bore-drain surveyors with field staffs, and two bore inspectors. Amongst other things, these officers are obtaining altitudes and particulars about existing bores, the proper seatings of castings, the proper construction of new bores, and making the necessary inquiries respecting trust areas. The problem respecting the diminution of flow is also being carefully investigated, and in one district the rate of fall has been observed to be as much as 7 ft. per annum; 124 bores that have been specially observed show that during the last fifteen years there has been a decrease of 40 per cent, in the aggregate flow. The Act was passed in 1910, and the following year was occupied very largely in preparing for work. In 1912 the first Interstate Artesian Water Conference was held in Sydney, and since that time Queensland has been working steadily with the object in view. Five water trust areas have been constituted, and bores have been sunk by the Government, while twenty-two trust areas have been constituted, and work is being pushed on with the necessary bores and bore-drains. In connection with the five completed areas 156 miles of bore-drains have been provided, watering about 385,000 acres. at a cost of less than a penny an acre. The twenty-two areas on which work is in progress will water approximately 2,250,000 acres.

When Mark Twam in his early days was editor of a Missouri paper, a superstitious subscriber wrote him saying that he had found a spider in his paper, and asking him whether that was a sign of good or bad luck. The humorist wrote him this answer and printed it :-

"Old Subscriber: Finding a spider in your paper was neither good luck nor bad luck for you. The spider was merely looking over our paper to see which merchant is not advertising, so that he can go to that store, spin his web across the door, and lead a life of undisturbed peace ever afterwards."

The death is announced at Fernleigh, Crawley Down, of Mr. William Orrin, who was for many years a surveyor to the East Grinstead Rural District Council.

\_\_\_\_

The partnership hitherto subsisting between A. J. Wileman and F. B. Gange, builders and contractors, at Nottingham Road, Loughborough, Leicester, under the style of Wileman and Gange, has been dissolved.

Approval has been given by the Local Government Board to the preparation of a town planning scheme for the Beulah Hill district of Croydon. The Board suggested at the same time that authority should be sought to prepare similar schemes for other unbuilt areas in the

The City Council of Nottingham have reconsidered their determination to abandon the provision of public baths in three districts, and have decided to proceed with the Basford scheme, land in Noel Street having been purchased at a considerable cost as a site for the new establishment, while a street widening will also be effected.

At the last meeting of the town council of Loughborough, Leicestershire, the waterworks engineer reported the failure of registered waterworks plumbers to obtain cards from the waterworks department before proceeding with waterworks department before proceeding with work connected with the water services. One man had carried out ten jobs without first obtaining cards for the work. It was resolved, after some discussion and a division, that the plumber in question be prohibited from carrying out any work for a period of two months.

### PROFESSIONAL AND TRADE

SOCIETIES.
EDINBURGH ARCHITECTURAL
SSOCIATION AT STIRLING.—The STIRLING. -ASSOCIATION annual excursion of the Edinburgh Architec tural Association took place on Saturday week to Stirling and Keir House, Bridge of Allan. The party first visited Stirling Castle by permission of H.M. Office of Works and the military authorities. Dr. Thomas Ross acted as leader, and Mr. W. S. Menzies clerk of works. Queen Anne's Gateway and King James IV.'s Gateway were described in passing. The Palace was first visited, and Dr Ross stated that the grotesque statues and figures were probably the work of French masons brought over by King James V. Stirling parish churches were next visited by permission of the Town Council. In the afternoon, the mansion and gardens of Keir were visited by permission of Colonel Stirling of Keir. Mr. Balfour Paul, architect, and Mr. James Rodger, factor, conducted the party over the new chapel, the library, dining and reception rooms. WAR TROPINES FOR MUSEUMS.-

The annual conference of the Museums Association was opened on Wednesday at the Victoria and Albert Museum, South Kensington. Sir Cecil H. Smith, Director of the Museum, welcomed the members. The president, Mr. E. R. Dibdin, curator of the Walker Art Gallery, Liverpool, said he thought the present dangers to the national treasure-houses were understood, and guarded against as far as possible, by those who had national collections, both public and private, in their charge. Dr. F. A. Bather, of the Natural History Museum, South Kensington, gave an address on "Museums and the War." Mr. W. Ruskin Butterfield, of Hastings, in a paper on "Museums and the National Cause," said that the War Office must have accumulated a large amount of material and appliances captured from the enemy or found on the battlefields. If the War Office and the Admiralty were willing to co-operate with museums it would not be difficult to arrange for the exhibition of it. Mr. E. Howarth, Sheffield, said that he had desired to set up a collection of munitions and shells, but the War Office had refused their sanction. Mr J H. Charlton Deas, Sunderland, said that they had been unable to secure any relics of the bombardment of West Hartlepool for the museum. There were plenty of fragments of shells, and there had been a great demand for them, so that when the supply ran short local tradesmen had to manufacture them. museum had not even got the shell that came through the library roof, for a workman who was working there appropriated it. posal to utilise museums for exhibits of munitions and war history subjects was supported by many other speakers, including the curator of Warrington Museum. seum. Thursday on Mr. course of a discussion on Thursdo "Museums in Relation to Education, A. Green, Professor of Education at Sheffield University, said that for the student the museum should be an encyclopædia and hook of reference. The labels on the speci-mens were rarely skilfully done, and to the The labels on the speciuninstructed they carried no message. In his opinion the authorities responsible for the museums did not spend enough money on printing, and he advocated the distribut on printing, and no advocated the discrept of among teachers of a little book dealing with the educational side of the museum. A well-organised museum should be the most population. ar and useful institution in a town. H. Bolton, of Br stol, remarked that at one time the museum was nothing more than a time the nuseum was nothing more than a curiosity shop, but it had now moved for ward and had taken its stand nearer the University College than the elementary school. Mr Woolnough, Ipswich, complained school. Mr Woomongn, tpswich, companied that Mr. Carnegie had crippled museums by stipulating that the whole penny under the Libraries Act should go to the library.

OBITUARY.

Hendrik Willem Meshag, the Dutch makine painter and manifecent give of other painters, died at his hease. Staan van Meerdervoost, The Hague, on Fr Laan van Meerdervoost, The Hagne, ercht day night, aged 84 years. His moseum if modern Dutch art, presented to the Dutch nation in 1903, is the resort of all cultivated visitors to The Hagne. Yet, arheigh all his life a lover of painting, Mesdag was 55 before his left his father's backing business to make it a profession. His wife was also 55 before she took the brush in hand, yet lived to achieve a reputation with it almost as great as his. Both were both in Groungen, the hirthplace of Josef Israels, he in 1851, she three years later, and they he in 1851, she three years later, and they married in 1856. Two of his seascapes are hung at the Luxembourg—"The Snowing Sun," acquired in 1888, and "Before the Storm," in 1890, and in the Rijks Museum at Amsterdam is his "Shore at Schevenin

Second Lieutenant Hugh Frederic Davies, 1-5th Regiment (T.F.), whose death was reported on Friday, aged 25, the youngest son of Mr. John Davies, of Chester, was an assistant architect in the service of the Liverpool Corporation. On the outbreak of war he enlisted as a private, and on October war ne enusted as a private, and on October 24 was given his commission. He was men tioned in Sir John French's dispatches of June 22 last. He was a relative of the late Major Hale, V.C., C.B., and was killed in action in Flanders on July 5.

Mr. Douglas Thomas, jun., of the firm of Messrs, Parker, Thomas and R.ce, architects, Boston, Mass., was killed in an automobile accident while in Ba'timore, on June 10. Mr. Thomas was only forty-buryears old. He graduated in 1895 from Johns Delinia, University and later studied both Hopkins University, and later studied at the Massachusetts Institute of

nology and in Europe.

we regret to learn that Mr. Joseph Mason, managing director of the Stiety Tread Synd, cate, of 15, Barbican, E.C., passed away on Friday evening last. He was the original patentee of the Mason's Patent Syar Treads. one original contents of the Mason's Patent Star Trads, so well known and used all over the world. He had governed the syndicate in the capacity of managing director in capacity of managing director since its in ception in 1893, and the directors and staff feel that they have suffered an irreporable loss. His death has caused great series among both his personal and business ir cods. among both his personal and business free ds. The end was very sudden and quite unexpected. Although Mr. Mas in had been away from business is new November last the upha severe illness, he recovered sufficiently take up his residence of the sensible convalescent; up to the day between his sudden death. A church of St. Patrick is in course of erection at Newport, Ireland, from plans by Mr. R. M. Butler, F.R.I.B.A., of Kildare Street, Dublin. The church is Irish Romanesque in style, and measures 150 ft. by 80 ft. It is being built of local red sandstone. The contractors are Messra. John Sisk and Son, of Cork.

#### COMPETITIONS.

A MODEL STREET INTERSECTION.-Out of a total of 200 competitors for prizes offered by the New York Municipal Art Society for the best architectural solution of the intersection of an avenue and a street—the society having in mind the congestion of traffic at Fifth Avenue and Forty-second Street, N.Y., as an example—Mr. John Floyd Yewell. of 120, Regia Street, Peekskill, N.Y., won the first prize of \$300. Messrs. James Ambrose Thompson and Ernest Lewis, of 101, Park Avenue, New York, won the second prize of \$200, and Mr. Calvin Kiessling, with Mr. Herbert E. Davis, of 175, Fifth Avenue, the third prize of \$100.

DUTCH EAST INDIÂN RUBBER FAC TORY.—H.M. Consul-General at Rotterdam (Mr. E. G. B. Maxse, C.M.G.) reports that the Council of the International Association for Rubber Cultivation in the Netherlands East Indies is organising an international competition for (1) a plan for a complete rubber estate factory principally for the making of "crepe, factory principally for the making of "smoked sheet". Both plans are to be drawn up in Both plans are to be drawn up in sheet. such a way that at first the capacity of the factory will amount to 100,000 kilogs. of dry rubber per annum, which by three extensions can be increased to 250,000 kilogs. The projects should be accompanied by a detailed description of the factory and of the way in which the competitor considers the product should be treated, and also of the necessary machinery. Projects may be made in English and should be sent in before March 1, 1916, either to the office of the Association, 13, Kneuterdyk, The Hague, or to the office of the "Algemeene Vereeniging van Rubber-planters ter Oostkust van Sumatra" at Medan (Deli). For the best project a prize of 1,500 florins is offered, and a prize of 500 florins will be given for the second best project. Prizes will be awarded before June 1, 1916, by a committee appointed by the Association, who reserve the right to make no award of the prizes if in their opinion the designs sent in are unsuitable. The conditions can be seen at the Board of Trade Office, 73, Basinghall Street, E.C.

LEICESTER .- Twenty-three designs have been submitted for the new Wyggeston Grammar school, Leicester, in competition. drawings are in the hands of the assessor for adjudication, but it is uncertain when the offiadjudication, but it is incertain when the omicial notification of the award will be made known. Premiums of £100, £75, and £50 are offered for the three best designs, and the assessor appointed is Mr. George Widdows, F. R. L. B. A.

LOUTH, IRELAND,-The award of the assessor, Mr. William A. Scott, F.R.I.A.I., A.R.H.A., A.R.I.B.A., in the Louth County offices' competition, has not yet been settled. Nineteen sets of designs have been received, and the plans will be on yiew in the Council Chamber, Court House, Dundalk, after the umpire's choice is made. The result may be expected shortly.

The hospital of St. John, Crumlin Road, elfast, is being enlarged under the direc-on of Mr. W. J. Moore, Royal Avenue, Belfast, is be Bolfast.

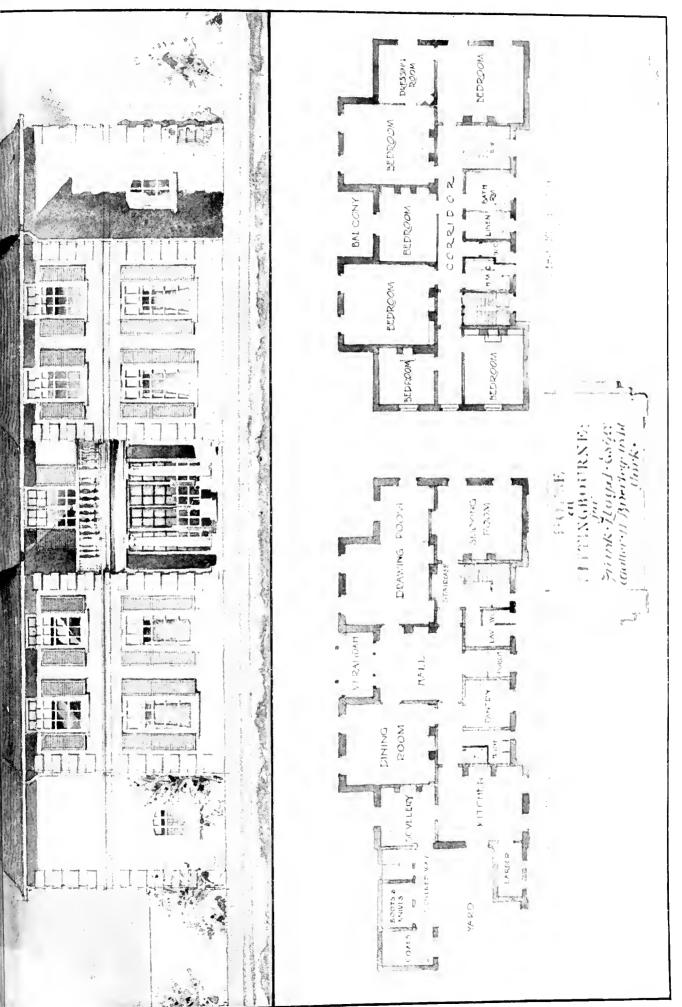

The urban district council of Audley, Staffs, have approved the plans of Messrs. Whitehead and Eales, engineers, for the sewerage of the Chapel Street area, at an estimated cost of £1,300.

M. Henri Gaudier Brzeska, a sculptor of great promise and ability, who was killed at Neuville St. Vaast after two promotions for his gallantry, was a French citizen, but most of his sculp-ture was done and exhibited in London. Several examples of it were to be seen at the recent Exhibition of Vorticist Art at the Doré Gallery.

Wednesbury Town Council have received an intimation that the Local Government Board do not think they would be justified at present in sanctioning the application by the corporation for power to borrow £5,340 for the erection of twenty-four artisan dwelling-houses. They regret that the carrying out of nonses. They regret that the carrying out of the schemo must be postponed. The decision places the corporation in a somewhat awkward position, as not only has the land been acquired, but a number of the houses have actually been erected.

## Building Intelligence.

GLASGOW.—The North British Railway Company have entered upon a scheme of improvements at Queen Street Station, Glasgow, which will involve an expenditure of about £40,000. A new parcels department is being erected, with a public entrance in North Hanover Street, for outward parcels, and an exit is also being provided for delivery vans for inward parcels. The inward parcels will be raised by elevators from the various platforms to an overhead roadway, along which they will be conveyed to the vans. After the parcels departments are transferred to the new offices the present offices at the corner of West George Street and Queen Street will be rebuilt, and a new entrance provided to The offices of the goods manager the station. and the engineer, at present situated in this building, will be removed to what was for-merly the Royal Hotel, on the north side of George Square.

WESTMINSTER CATHEDRAL. -- The chapel of St. George and the English Martyrs Westminster Cathedral is to be dedicated to the everlasting memory of officers who fall in the war. The decoration of the chapel will be carried out in marble and mosaic in the style followed in the adjoining chapel of Holy Sonls, and simple memorial tablets will record the names of the officers who are killed the dates of their death. Work is also to be started at the cathedral on the great tympanum of the entrance, the only important feature outside the building which now re-

### mains to be finished.

#### CAUSES OF METAL BRIDGE CORROSION.

Discussing, before the Engineers' Society of Western Pennsylvania, the protection of metal structures, Frederic H. Fay, of Fay, Spofford. and Thorndike, consulting engineers, Boston, pointed out that the corrosion of metal bridges is due principally to one or more of four causes. These are exposure to locomofour causes. tive gases; exposure to sea water; exposure to surface water leaking through bridge floors; overstress of the metal, by which corrosion has been hastened.

The condition of frequent wetting by salt water, followed by exposure to the atmosphere, is a severe test. The Neponset bridge. built in 1877, was a small two-leaf trunnion bascule draw span with wrought-iron girders. The counter-weighted ends of the girders were immersed in salt water whenever the bridge was open at high tide. These girders were painted frequently, usually with red lead, and they continued in service thirty-two years, until the bridge was rebuilt.

Laboratory experiments have shown that steel stressed beyond its elastic limit will rust more rapidly than steel which is not overstressed. This seems to be borne out by experience in certain cases of highway bridges carrying constantly increasing street railway loads. When heavy cars have been put in service over these structures the outstanding legs of the flange or seat angles immediately under the stringers have been found to rust very rapidly-much faster than the metal at each side of the stringer.

The foundation-stone of a new Wesleyan church has been formally laid at Wincanton. Mr. A. Brocklehurst, of Manchester, is the architect, and Messrs. Bird and Pippard, of The outlay will are the contractors.

---

The urban district council of Stone, The urban district council of Stone, Stans, have this week decided not to purchase the gas and electricity undertaking offered to them by a local supply company for £38,100 and to withdraw from all negotiations, and from all further steps towards the promotion of a Bill for the acquisition of the works.

At a meeting of the Northern District Committee of Ayrshire County Council at Kilwinning on Thursday, it was intimated that Mr. Roderick M'Donald had been appointed road surveyor for the whole district. The property of the whole district is the surveyor for the whole district. appointment was carried at a special meeting by 14 votes to 12. The amendment favoured two surveyors, as formerly.

#### LEGAL INTELLIGENCE.

CROWN'S POWER OF REQUISITION OF LAND.—No Right to Compensation. On the 7th inst., in the King's Bench Division, the 7th inst., in the King's Bench Division, Mr. Justice Avory give judgment on a petition of right presented by an aerodrome company raising the important question whether the Crown could commandeer premises and land for military jurposes without granting any compensation.—The aerodrome company by their petition contended that they were entitled to receive compensation for their avia their petition contended that they were entitled to receive compensation for their aviation ground and premises having been taken over for military purposes. They did not dispute the right of the military authorities to acquire the property compulsoridy. The Crown submitted that the aerodrome had been acquired under military necessity, and that the petitioners were not entitled to compensation. It was said that the Crown chained no right It was said that the Crown claimed no right When the case was before the Court during the previous week it was not reported, as for military reasons it was thought inadvisable to mention the locality. The judge now intiniated that there was no objection to the decision being reported.—Mr. Justice Avory said cision being reported.—Mr. Justice Avory end he had come to the conclusion that his Majesty, by virtue of his war prerogative through his representatives was, in existing circumstances, entitled to take possession of the land and premises without making compensation. the land and premises without making compensation. In addition the regulations under the Defence of the Realm Act conferred on competent naval and military authorities during the continuance of the war alsolute and unconditional power to take possession of land and buildings, and do any other act interfering with private property for the public safety or the security of the Realm. That enactment repealed any right to compensation if it existed at any time under the earlier Acts. The pet-tioners had failed to establish any right in law, and there would be judgment for the Crown The petitioners were, however, entitled under the conclusions of the Royal Commission of Inquiry of March 31 to apply for compensation in respect of direct or sabstantial loss sustained by their through interference with their property and business. There were reasons in property and business. There were reasons in the correspondence which induced him to make no order as to costs.—Leave to appeal was refused.

DUNDEE ARCHITECT'S LIBEL ACTION.

—R.N. for Pursaer, in Cansa—J. H. Langlands v. J. Leng and Co., Ltd.—In the Second Division of the Scottish Court of Session, the Lord sion of the Scottish Court of Session, the Lord Justice-Clerk and Lords Johnston and Guthrie on Saturday disposed of a reclaiming note for James Hendry Langlands, architect, Cummont, Kingenne, near Dundee, in his action against John Leng and Co., Ltd., proprietors of the Dundee Advertiser, for £3,000 damages in respect of alleged slander. The pursuer, who is the architect under the Dundee School Board, complained of statements which americal in complained of statements which appeared in the Dunder Advertiser in connection with proceedings which took place at a meeting of Dundee School Board when the extension of of Dundee School Board when the extension of Harris Academy was under consideration. The defendants defined slander, and repudiated the detendants defined stander, and repudiated the interpretation put by the pursuer on their comments. Lord Anderson in the Outer House dismissed the action as irrelevant, with expenses. The Division allowed the pursuer to amend his record, and after this had been done, recalled the Lord Ordunary's interlecturer, and approved record, and after this had been done, recalled the Lord Ordinary's interlocutor, and approved of an issue for the trial of the action. Ne expenses were found due to or by either party. The Lord Justice-Clerk said that the Court were of opinion that there must be an issue, and that the terms of it should be as follows:—It being admitted that on or about the 7th day of October, 1914 the defenders printed and published in their newspaper, the Dunder Advertiser, an account of a meeting of the School Board of Dundee headed "School Board Plight," in terms of Schedule I, hereto annexed, and a relative article headed "Dundee School Board and its Architect," in terms of Schedule II, hereto annexed, and a relative article headed "Dundee School Board and its Architect," in terms of Schedule II, hereto annexed—whether said ac School Board and Is Archived whether said ac Schedule II, hereto annexed—whether said ac count and article, or part thereof, are of and count and article, pursuer, and falsely and count and article, or part thereof, are of and concerning the pursuer, and falsely and calumniously represent that the pursuer had in his position of architect to the said Board acted corruptly for his personal benefit, or make similar false and calumnious representations of and concerning the pursuer, to his loss, injury, and damage. Schedule I, contains the account of the meeting, and Schedule II, the article referred to. Counsel for the Pursuer—Mr. Watt. K.C. and Mr. Paton. Agents—Maxwell Gill, and Pringle, W.S. Counsel for the Defenders—Mr. Sundeman, K.C. and Mr. Lippe. Agents—Alex, Morison and Co., W.S.

GLASGOW BUILDING CONTRACT

Wednesday, and Thursday in a Lord Chancellor and Lord. Atking a Prinard Wienbury heard the appear the stish County Investment Company St. A Street, Glasgow, from a pudding of the Lord Division of the Court of Session affiness by the Lord Ordinary short Have a raction by the respondent, Elphine are Foundational Division of the Court of Session affiness higher. Divon Street, Glassow, to the paraction by the respondent, Elphine are Foundational of £653 as balance alleged the parameter of work in company of the parameter of contract for work in company of the the erection of four tenements in Government of Road, North Kelvinside, The appearance of the key was discrete in various respects, and the contract in various respects, and the contract in the appearance of the contract, and, if we while the was entitled, notwith-standing, to decree for the balance of the contract prine. Considerable discussion took place as to the difference between the laws of Seatland and England in regard to breaches of contract in such circumstances. Their Lordships announced at the close of legal arguments on Thursday that judgment would be reserved.

THE MEASUREMENT OF TIMBER CARGOES His Honour Judge Seated gave judgment on Wednesday in the action recognition.

CARGOES His Honour Judge 8 and gave judgment on Wednesday in the action strought at the Liverpool County Court, the naturn of at the Liverpool County Court, the neuring of which lasted three days, in which the low, for the steamer Erik, a Copenhagen urin claimed £194 from the Ship Cana Portland Cement Manufacturing Company, Ltd., of Ellesmere Port, balance of freight on a cargo of staves carried from Archangel to Ellesmere Port. His Honour found that the method of measuring the cargo adopted by the defendants was more accurate and reliable than defendants was more accurate and reliable thin that of the Customs Fund, who measured for the plaintiffs, and that the ship carried 260 standards as against the 419 set up by the plaintiffs.—Indigment was given for the de-

plaintiffs.—Indigment was given for the defendants, with costs.

THE VALUE: OF LINCOLNSHIRE LAND, Mr. John D. Wallis, E.S.I. an Official Referee under the Finance Act, 13c9-10, has given his decision in the appeal of "Austen" r. Commissioners of Infraid Revenue," which he heard at Lincoln on June 3, relative to the valuation of land at Swineshead, near Boston, for the purpose of estate duty. The appellant was Mr. Edward L. Tennant Austen, and the question for decision was the market value of a total area of 1,102 acres as at the death of the Rev. J. M. Austen on May 24, 1909. For the appellant it was stated that the land was sold for £35,500 on November 1, 1915, and the value of £40,970 placed on it by the Land Valuation was therefore excessive, being apparently influenced by the price of £41,15 real sol at the subsequent resule. Evidence was called on behalf of the appellant to show that there had been a considerable appreciation in the value of land in Lincolnshire since the Small Holdings Act came into operation, and the resule figure had been reached by virtue of the land being split up. Mr. Gerald Live, F.S.L. of 8, Oxford Street, Nottingham, superintending valuer of the Eastern Division, said the basis of his valuation was what a person in the open market would pay, nor what an ing valuer of the Eastern Division, said the basis of his valuation was what a person in the open market would pay, not what an expert would advise him to give. If Mr. Austen had had local advice in 1900 there was no reason why he should not have denied £47,000 then, and witness would be a calmet that £47,000 was the top price to deep he get. The Referee has fixed the value of £40,970, the appellant to the calmeter curred by the Commiss ners

Mr. D. Bell, surveyor to the Windesham Prban District Conneil, has had his salary in creased by £45 per annum.

Mr. Donald Reid, burgh survey r and san tary inspector of Wick has been a pointed burgh surveyor of Inverkenthuiz

Pepler and Allen for their information.

The corporation of Satton Coldfield formally of the meeting, and Schedule II, the article referred to, Counsel for the Pursuer—Mr. Watt, K.C. and Mr. Paton. Agents—Maxwell Gill, and Pringle, W.S. Counsel for the Defenders—Mr. Sondeman, K.C. and Mr. Lippe. Agents—Alex, Morison and Co., W.S.

GLASGOW BUILDING CONTRACT APPEAL.—In the House of Lords on Tuesday,

### Our Office Cable.

Tre annar, exhibition of drawings at the School of Architecture, Liverpool University, was opened on Wednesday last at Liberty Buildings in that city. The display is, as was to be expected, smaller in number than usual. but the standard of draughtmanship is high The principal exhibits are the competitive drawings for the travelling scholarship effected by the British School of Architecture at Rome and for the Sir William Lever proze. The School of Rome subject was a design for a "Palace of Justice," and that sent in by Gord in Hemm, of Heaton Chapel, near Stockport, arrests attention on account of its Stockport, arrests attention on account of its striking ground plan. As the scholarship has striking ground plan. As the scholarship has been suspended owing to the war, the designs in this section, which are all of high merit, will be put into another competition. Mr. Hemm's cubicle contains also a number of cathedral and abbey sketches, and a measured drawing of the Free Trade Hall at Mandagara. For the Lagrangian of the subject Manchester. For the Lever prize (the subject being a railway terminal hotel and station). Lime Street, Liverpool, was selected as an ideal site, and the drawings suggest a North-Western station extension on lines harmonious western station extension on times narmonious with St. George's Hall. Vincont Hall's design has been placed first, and that of A.B. B. Jopling second. A series of designs are shown for a national memorial to Lord. are shown for a national memorian to be a Roberts, by H. Gregory and others. The work of F. O. Lawrence and R. G. Dixon has special interest because they are the first two students to be admitted to the degree of "B. Arch." (Bachelor of Architecture), which supers des the former B.A., with honours in architecture. A young Belgian student Hemil Hofman, who has just diverted his attention from Gothic to Classic design, shows zond progress in his new line. Among his measured work is the Lyceum, Bold Street, Liverpool. He has joined in the general competition for a pump room with dome, a subject which, together with that of premises for a fine art dealer, has evoked much mentorious work. Other subjects for designs set in the school are those for a country residence, a golf club-house, and a cricket

A series of a dozen original pen-and-ink sketches by Mr. Arthur Comfort of various features of the Mid Fifteenth-Century parish teatures of the Mid Fitteenth-Century parish church of Halifax has been purchased by the Education. Committee of that horough for the permanent collection of local views in the Bank Field Museum, Halifax. There is a crude engraving of the south side of the church, says Dr. T. W. Hanson in the Halifax Chronicle, in Watson's History and a much later and wretchedly drawn steel engraving of the same view by Adamthwaite. About 1820. John Horner drew on stone an exterior and interior view, which drawings were usued hand-coloured. Shortly afterwards an unknown artist executed a lithowards an unknown artist executed a lithograph of the south exterior. In 1839 40, Wm. Moor published four views of various parts of the interior. Somewhat earlier was the drawing on copper by Thos. Taylor, which was reassued in 1876 in connection with Lev-Yorkshire Architectural and Topographical Secety. Albert Gilbert's painting, 1837, is is-th pear and incorrect. Two years ago F. O. Ellis, who has now enlisted, is-und a sketch in which the tower looms in the distance.

year the National Art Collections This year the National Art Collections Find has not been able to put forward any great effort, but it has steadily continued its valuable activities. The beautiful ironwork 20 Me for the tomb of Margaret Countess of Richmond and Derby, in the south able of Henry the Seventh's Charel, which was removed by Wyatt June 1822, has alterations in 1822, has three, which was removed by the large larg

other gifts which the Fund has presented to

An interesting discovery has been made during the rebuilding of Wargrave Church, which was set on fire by suffragettes in 1914 In rest ring the tower it was found that the present civing of red brick is a covering or asing of the original Norman tower, which is a very fine example of Norman masonry, and, in the opinion of experts, one of the best discovered up to the present time.

Illere is no record of the date of the casing of the tower, or by whom the work was done, but the treatment suggests that it was in the reign of either Henry VII, or Henry There has also been discovered a number of interesting vaults under the chancel, of which no mention is made in the church records.

The Cathedral of Arras, wilfully destroyed by fire by the Germans on Wednesday last, was built on the site of the church of the Abbey of St. Vaast, or Vedast, in the second half of the eighteenth century, and was a heavy structure of no architectural merit. The reconstruction was begun in 1755 and was brought to a stop by the Revolution of 1789. The works, resumed in 1810, were completed in June, 1855. It was a pseudo-classical crucaform editice with a nave of half-a-dozen bays, a choir of three bays, both with aisles, and semi-circular apse, out of which six chapels open, and transepts also each of three bays. The nave, choir and transepts, which had barrel vaults, were separated from their aisles by colonnades of Corinthian columns, and at the west end was a gallery housing a large organ. In the west aisle of the north transept was a mag which various coloured marbles were emthe north transept was a large baptistery, in ployed with fairly good effect. Till the be-ginning of the war the cathedral contained gining of the war the cathedral contained several good paintings and monuments and two Early Flemish triptyches, all formerly in the Abbey of St. Vaast. A small view of the interior of the cathedral nave, looking East, appeared in our issue of January 13, 1911, p. 61. The old Gothic cathedral, one of the finest in the north of France, was a much larger edifice, wantonly destroyed in the eighteenth century on the allegation being made that it was in an unstable condition.

How to find sufficient housing accommodation for war workers is becoming an increasingly difficult problem in Sheffield. Numerous letters have been received by the corporation authorities from both workers and employers asking that the problem should be taken thoroughly in hand. Seventy per cent. of the applicants for houses on the corporation's model dwellings estate at High Wincobank Estate certify themselves as being armament workers. The town clerk has been in-structed to bring these facts to the notice of the Local Government Board and the Minister of Munitions, together with statistics as to the overcrowding of existing houses, with an intimation that, in the opinion of the Estates Committee, an overwhelming case has been made out for the erection by the corporation at the earliest possible date of an even larger number of working-class dwellings than is comprised in a scheme now before the Local Government Board; and that as the existing shortage has been intensified by the importation of a large number of workers on munitions of war, and the demolition of houses in connection with extensions of works, it is desirable that the requisite consent of the Government departments to the necessary loan be given at once. The town clerk has also been instructed to inform the Local Government Board that unless steps can be taken to remedy the shortage the corporation will find it difficult to carry out to the full extent the duties imposed upon them with regard to the closing and demolition of in-

ment made to the local authority by manufacturers, and the extent to which trade liquors interfere with the purification of sewage, are among the points whereupon Mr. Brown, whose address is the Town Hall, Southall, Middlesex, seeks information, v.l. ch, when tabulated and edited, will evidently be of great value to municipal engineers generally.

The Executive Council of the United Operative Plumbers Association of Great Britain and Ireland, at a special meeting held at Newcastle-on-Tyne, expressed approvat of the action of the Plumbers' Company in appealing to the registered plumbers of United Kingdom to place their services, so far as practicable, at the disposal of the Government for the execution of work connected with the supply of munitions of war, or other purposes for which their work might be required by the State, for the duration of the war. The Executive Council joined the Company in the appeal, and decided to extend it to all members of the association.

The following awards have been made in the Faculty of Engineering at University College. Gower Street, W.C.:—Archibald P. Head Medal and Prize, B. C. Drummond; Studentship in Heating and Ventilating Engineering, G. F. Mitchell; Engineering Diplomas, P. W. Baker (Mechanical), E. E. Barnard (Civil and Municipal), J. R. D. Bushell (Civil and Municipal), P. L. Capper (Civil and Municipal), P. L. Capper (Civil and Municipal), B. C. Drummond (Mechanical—with distinction), H. N. Charles (Mechanical), T. C. Chua (Civil and Municipal), B. C. Drummond (Mechanical—with distinction), H. Foad (Civil and Municipal), G. K. Pillai (Civil and Municipal), and S. L. Wong (Civil and Municipal). The following awards have been made in Municipal).

"Plain and Reinforced Concrete Arches" (London: Chapman and Hall, Ltd.) is an American translation, by Professor D. B. Steinman, of Idaho University, of a German work by Professor J. Melan, which is probably well known to many readers, but of which, so far as we know, no English render-ing has before appeared. The principle of the Melan arch is fully explained, and all data has been converted from metric to English

Part IV. of Volume VII. of "The Trans-Part IV. of Volume VII. of "The Transactions of St. Paul's Ecclesiological Society" has just been published (by Harrison and Sons, 45, Pall Mall), price 5s. Two City churches in the neighbourhood of London Bridge, both rebuilt by Wren, those of St. Magnus the Martyr and St. Mary-at-Hill, are described by Mr. Philip Narman II D. described by Mr. Philip Norman, LL.D., V.P.S.A: Mr. H. P. K. Skipton contributes an interesting paper on "The Pilgrims' Way and the 'Pilgrim's Progress,'" in which he seeks to show that the scenery of the worldfamous allegory was derived, not from the low hills of Bedfordshire, but from the bolder landscapes of Surrey. Guildford as the City of Destruction, St. Martha's Hill as the Hill of Difficulty, the iron furnaces of the Weald as the Valley of Humiliation, Dorking as Vanity Fair, and the Leith Hill range as the Delectable Mountains—these are among the identifications supported by the theory that the immortal tinker and dreamer preached in the villages about Guildford before his second imprisonment. Mr. Geoffrey Webb descants on "The Relation of Painted Glass to Other Colour Decoration in Churches"; the Rev. E. S. Dewick, M.A., F.I.A., writes an illustrated article on a Premonstratensian abbot's service book of the beginning of the

During the months of April, May, and June the Road Board indicated additional June the Road Board indicated additional advances to highway authorities, amounting in the aggregate to £109,903, of which £107,007 was by way of grant and £2,896 by way of loan. The advances made and indicated up to June 50, less indications cancelled, amount to £6,132,279. Of this total £4,685,755 is by way of grant and £1,446,526 by way of loan. The formal grants completed, with the approval of the Treasury, during the last quarter, amounting to £125,847, were applied as follows: Road crust improvements, £125,045; road widenings and improvement of curves and corners, £419; reconstruction and improvement of bridges, £1,533; new roads and bridges, £1,050.

The annual report for 1914 of the Medical Officer of Health to the Borough of St. Marylebone, Dr. Charles Porter, barrister-at-law, has just been published. The population of the borough continues to diminish, owing to migration, demolition of houses, and the erection of business premises in their stead, and is now estimated at 112.892, against 117,844 revealed by the census of 1911. The birth-rate remains at 18.7, exactly as in 1913, and the death rate is also unaltered, being 14.9 per thousand. Efforts are being made by the borough council and a local health society for the prevention of infantile mortality. House to house inspections were carried out systematically, and as a result of friendly discussions a large number of reforms were effected by the owners. In six demolition orders were obtained. In six cases appeals against closing orders were heard by the Local Government Board. One of these, relating to flats in Dorset Buildings. Street Mews, was dismissed; in the other a decision had not been given when the year The number of overcrowded rooms and of underground dwellings were considerably fewer than in previous years, results of the active work done in the past. The report, of 96 foolscap pages, testifies to the efficient work done in the Sanitary Department of the borough by Dr. Porter and his colleagues.

Dissatisfaction has been expressed recently in Australia with the progress of the important railway under construction from Kal-goorlie, in Western Australia, to Port Augusta, in South Australia, which is designed ultimately to form part of a great east-to-west transcontinental line. The Commonwealth Minister for Home Affairs has now issued a report on the work, supplied by the engineer-in-chief. The construction of the line, which will be over 1,000 miles in length, has been proceeding from both ends. From the West Australian end the rails have been laid for 238 miles, the route has been permanently located for 260 miles, and a preliminary survey has been carried right up to the South Australian border. From the South Australian end rails have been laid for 245 miles, and the route has been permanently located for 428 miles. In each State telegraph lines have been erected for about miles. Some idea of the magnitude of the work may be gathered from the fact that at the end of April last the expenditure on the line amounted to well over three millions sterling. In South Australia the construction of the earthworks is involving exceptional difficulties, and a certain amount of delay has been occasioned by the decision to ballast the line throughout its entire Rock-crushing machinery for this purpose has now been erected in both States. Rails are being laid at the rate of a mile a day, and it is estimated that the line will be completed towards the end of next year.

#### ---MEETINGS FOR THE ENSUING WEEK.

Wednesday (To-day).—Camera Club. Opening of Exhibition of Sketches by Members, (Closes on August 21.) 17, John Street, Adelphi, W.C. 11 a.m. to

Royal Sanitary Institute. Provincial
Sessional Meeting at Veovil. Discussions on "Water Supplies to Rural
and Small Urban Areas," to be
opened by Dr. W. G. Savage, and
on "Prevention of Minor Infectious
Diseases," to be opened by Dr. A. E.
Remmett Weaver. 11.15 a.m.
Wednesday (July 21).—Builders' Benevolent Institution. Thirty-eighth Annual Meeting.
Koh-i-noor Honse, Kingsway, W.C.
4 p.m.

A military hospital is to be erected at Huddersfield to accommodate 500 wounded soldiers. The cost, about £15,000, will be defrayed by voluntary subscriptions. The town council agreed on Friday to give the site, which will be on their estate at Royds Wood.

The Essex County Council have adopted Plans for additions to the sanatorium at Black Notley, raidway between Witham and Braintree, at an estimated cost of £4,486 9s. 11d. Tenders will be invited for the work as soon as the Local Government Board have approved the scheme.

#### CHIPS.

Mr. T. Richards, deputy surveyor, has been appointed surveyor to the Caerphilly Urban District Council.

At the last meeting of the Dublin Port and Docks Board it was stated that the corporation were about to spend £24,000 on repairing the north and south quays

The Grange-over-Sands Urban District Council at their last meeting increased the salary of their surveyor (Mr. T. Hundlestone, C.E.) from £250 to £275 per annum.

At the last meeting of Moffat Town Council, Mr. P. Grant M'Gregor, Bishophriggs, Glas gow, was unanimously appointed burgh sur veyor and samtary inspector.

The old State Hall at Albany, New York State, is about to be remodelled to serve as a Court of Appeals, from plans by Mr. Pilcher, of Capitol Buildings, Albany, the State architect.

Mr. H. B. T. Wakelam, son of Mr. H. T. Mr. H. B. T. Wakelam, son of Mr. H. F. Wakelam, county surveyor of Middlesex and president of the Institute of Municipal and County Engineers, is gazetted as Second Lieutenant in the Royal Regiment of Artillery, R.H., and R.F.A.

The death is announced of Mr. Francis Wiswally, J.P., A.M.I.C.E., of Runcorn, a member of the urban district council and manager of the Manchester Ship Canal Company at Runcorn (Bridgewater Department). He was seventy two years of age.

The new county council schools at Newbiggin the new county council schools at Newbiggin have been opened. They provide accommodation for 738 scholars. The accepted tender was for £11,551. Mr. Martin Martinson was the architect, and the contractor, Mr. Stanley Miller, of Newcastle-on-Tyne.

The Doncaster Corporation Bill has received the Royal assent. The measure provides for municipal buildings at a cost of £30,000; an isolation hospital at £35,000; street improvements at £50,000; and the extension of the gasworks and mains at £65,000.

Mr. Thos. P. Collinge, borough engineer and surveyor of Mansfield, has been the reci-pient of a solid silver teapet from the officials on the occasion of his leaving to take up his new appointment as borough surveyor and waterworks engineer to the corporation of Rotherham.

The Streets and Plans Committee of Middlesbrough Corporation have approved generally the alternative scheme of the borough engineer, Mr. S. E. Burgess, for laying out the Saltwells Estate, and have appointed a committee to confer with the landowners on the subject.

The following officers in the Archivects' Department, London County Council, have recently been killed in action: Lance, Corpl. A. E. W. Chappell, Queen's 24th London Regiment, T.F.: Lance-Corpl. J. Carey, a piper in the London Scottish; and F. H. Stanton, 12th Battalion, London Regiment, the Rangers.

The Merthyr Corporation Housing Committee have decided to invite tenders for erecting 100 houses at Gellifaelog, so that the cost may be considered when formal application is made to the Local Government Board for sanction to a loan. The estimate of the borough architect (Mr. Thackeray) is £220 per house and a total cost of £40,000.

The new schools presented to the parish of St. Anne, Stanley, Liverpool, by Mr. Thomas Fenwick Harrison, were formally opened by Fenwick Harrison, were formally opened by the donor in the presence of a very large gathering on Saturday. The buildings accom-modate 900 children, divided into three depart-ments of 300 each—boys, girls, and infants. The class-rooms each hold fifty children. A roof playground is provided. The architects were Messrs. G. Bradbury and Sons, of Cook Stroot, University Street, Liverpool.

The estimates on maintenance account for the current year of the London Education Committee were reduced at the last meeting by a the current year of the London Education Committee were reduced at the last meeting by a further sum of £90,000, bringing the total reduction on last year's estimate to £400,000. The largest item in this further reduction was £65,000 for the painting and cleaning of schools, and there was also a reduction in the amount for window cleaning by contract. During a discussion on the proposed reductions, Mr. Warburg ridiculed the idea that educational efficiency was being affected if painting was deferred. As for window-cleaning, the contractors had difficulty in finding the men, and it was patriotic to help to prevent the drain on the men of the nation. The reduction was merely in the number of cleanings. The committee's proposals were adopted.

The London County Counce German Bill was read a third time in the Hos Commons on Thursday.

New works estimated to act out had an are to be erected in Derby Road Hard-Messrs A and R Morley become nor

The urban district coincil of Good secured the sanction of the Local Governors Board to a loan of £5.74 for warned over 31.59

The Road Board have said to be a case of £3,407 towards the Devon County Councils proposed new road schemes the total case mated cost of which is £7,939.

A new social club has been formally opened at Rhymney Mr W. R. Jackson of Rhynney, was the architect, and Messrs. H. Davies and Co., of Bargoed, were the contractors. The cost was £1.400

The Northamptonshire County Council on Thursday, rejected, by thirty votes to thirteen-the recommendation of the education commit-tee to ruise a form of £7.5c. for the crection of a boot and shoe institute.

Mr. A. O. Harpur, surveyor to the Caephilly Urban District Conneil, has resigned by appointment on account of failing health, and Mr. T. H. Richards, deputy surveyor, has been appointed his success or

At Southampton yesterday Tuesday! Mr. A. W. Brightmore held a Local Government Board inquiry as to an application from the Corporation for sanction to borrow £14,600 for a water tower to be built near the Conmon.

for the weights and measures New offices department of the Cardiff Corporation erected in Womanby Street were opened last week. The building has been erected at a cost of 1,970 from the designs of the city engineer. Mr. W. Harpur.

Chelmsford Town Council has received Chemistord Town Council has received the sanction of the Local Government Board to the horrowing of £1.500 for pumping plant at Admirals Park waterworks, and £341 excess expenditure in connection with wood blockpaying in three streets.

On Sunday last the Roman Catholic Arch-bishop of Liverpool solemniy open dithe new Church of St. Paul, West Derby. This church has been built and completely furmished out of a sum of £10,000 bequeathed by the late M: William Leeming for that purpose. The arch-tecture is Gothic, from the designs of Messis Pugin and Pingin, and the building is of red sandstone. The altars are of alabaster, with marble panels, and the spacious nave and aislys will afford ample accommodation for the Catholic psipulation of the neighbourhood. On Sunday last the Roman Cathole Arch

The final accounts in connection with the erection of the Usher Hall, which was a gift to the city of Edinburgh, have been submitted to the city of Edinburgh, have been submitted to a corporation committee. The cost of the site, building, and furnishims amounts the £144,984. The estimated money in hand from capital and interest is £154,486. Thus there is an excess of expendature of about £10,490. The Usher Hall is built from plans by Mr. Howard H. Thomson, of Leicester, selected is competition, and illustrated in our issues of July 29, 1910; August 4, 1911, and March 191914.

A Local Government Board inquiry will be held at the City Hall, Dublin, to day (Wednesday) into the application of the corporation for sanction to loans of (1) £39,350, 2-£22,075, and (3) £6,000, for the purpose of erecting working-class dwellings in 1 Crabbellane and (2) Boyne Street, and 5' for widening and improving Lower Liffey Street Another inquiry will be held in the same building on Friday next into the application of the corporation for sanction to a loan of £12,940 for the purpose of creating working class dwellings on the Mi Cuffrey estate and St. James's Walk, Reaie

Mr. Cuthbert Redham Morris, of Gwyer House, North Curry, near Tauntor, whose death occurred there on Thesday night in last week, is believed to have been the oldest auctioneer in the West of England, for he commend business on his own manual tay has memoral business on his own arount no less than sixty three years ago in 1752, when he was barely twenty-one years of age. In course was barely twenty-one years of age. In course of time he took into partnership his two sons Messrs, C W and R. S Morris, and his son-in-law, Mr. J. G. Peard, who remained connected with the firm. Deceased was president of the Western Committees' Tenant Right Valuers' Association in 1903, while for thirteen years he was a member of the Somerset Drainage Commission.

Obituary
Artists' War Relief Exhibition

We pointed out on page 430 of our last volume, and indicated there several previous occasions on which we had already shown how failure had followed the attempts of local authorities to build rural cottages from stereotyped plans, giving out contracts for such—especially in Ireland—to builders evidently unacquainted with local needs, and without proper architectural supervision. We are glad to see the Society of Architects have taken this matter up in connection with a report of the Advisory Committee of the Board of Agriculture and Fisheries, which we briefly noticed on page 286 of our issue of March 5 last. That Advisory Committee consists of Mr. Christopher Turnor (the chairman), and Mr. Coril Harmanyorth, Mr. Paymand Mr. Cecil Harmsworth, Mr. Raymond Unwin, Mr. Lawrence Weaver, and Mr. C. E. Varndell. Working drawings of the designs given are to be had at a shilling or eighteenpence a sheet, and the specifications in each case at one penny. Twenty-three types of cottages are shown.

As the Society of Architects have pointed out in the remonstrance which the secretary has addressed to Lord Lucas, the President of the Board of Agriculture, the report contains a warning against the indiscriminate use of standardised designs, points out that an important factor in economy is competent supervision during erection, and states that in many cases "consultation with the builder" will enable economy to be effected without sacrifice. There is no reference in the report to the desirability of retaining an architect's services, and the natural inference is that such services are unnecessary and can be dispensed with.

Would it not, ask the Society of Architects, have been in accordance with proper and safe practice, and to the advantage of the public and in the best interests of the Board of Agriculture and Fisheries, if this report, most useful in itself, had been accompanied by a definite reference to the necessity of retaining an architect's services in order that the object which the Advisory Committee have in view may be fully attained? Local authorities, public bodies, and private building owners are already too prone to endeavour eliminate the architect whenever possible, and one result of the publication of the report will be to accentuate this tendency and to make it possible that the said plans and specifications may be so used that the object of the Advisory Committee will be defeated.

to us to evade altogether the point of the This is the Society's remonstrance. reply:

27th May, 1915. To the President of the Board of Agriculture and Fisheries.

My Lord,—The substance of the Society of Architects' objection to the report of the Advisory Committee on Rural Cottages seems to be contained in the following paragraph of their letter:—

"There is no reference in the report to the desirability of retaining an architect's services, and the natural inference is that such services are unnecessary and can be dispensed with."

are unnecessary and can be dispensed with."

Considering that the sample specification in the report requires the whole of the works to be varied out "under the direction and to the satisfaction of the architect or employer's agent," thus assuming the services of a skilled supervisor, the committee hardly think that the inference drawn is derived from the report.

The committee would further draw attention to pars. 4 and 5, which lay stress on the need for the exercise of care and taste and for adapting the type of designs to the local materials and the building into harmony with the surroundings; to par, 19, which emphasises the need for careful planning of the cottages; and to par, 31, which speaks of the limportance of a careful lay-ont plan with a view to prevent the spoiling of our villages and hamlets by the building of incongruous houses in unsuitable positions.

portance of a careful lay-out plan with a view to prevent the spoiling of our villages and hamlets by the building of incongruous houses in unsuitable positions.

They do not think these paragraphs suggest that the committee wished to checurage the dispensing with the services of a skilled advisor.

The view which is strongly expressed in the letter from the Society of Architects, that the report may have the effect of causing less cottages to be designed by architects, is not shared by the committee. Only a very small proportion of the cottages now built are designed or supervised by any professional expert. The committee helieve that this is because so few people realise how important are the many questions involved in cottage design, and how difficult it is to find a satisfactory solution within the available resources; and they anticipate that their report, by drawing attention to all these matters and showing that cottage design needs careful study if it is to be well done, will have the effect of inducing far more owners and authorities to take skilled advice than to dispense with it.

With reference to the suggestion that there should be in the report a recommendation to employ an architect, the committee, when they considered the point, were met with the difficulty that other professions claim that the planning of cottages comes within their duties. Both surveyors and estate agents carry out this work, and many of them have made a special study of it. Indeed, only a limited number of architects have given as much attention to this class of work as have many members of the other professions mentioned. In these circumstances, while the committee sympathises with the view that cottages should be designed in all cases by those fully qualified to do the work, they do not feel that it is their function to determine that none but architects are so qualified, in face of the claims and practice of the other professions mentioned. The committee have endeavoured to make clear the importance which they attach to go

The Council of the Society of Architects say in their rejoinder thereto that their observations on the report were made in the interests of architects, and not on behalf of the members of other professions or letter of the Society of Architects over to the Advisory Committee for explanation, and Mr. Christopher Turnor's reply has been forwarded to the Society. It seems to nave turned the mail of the members of other professions or intelligent comprehension than it has received so far by the Board of Agriculture's Advisory Committee if Lord Lucas's reply fairly gauges that committee's capacity!

carried out under the direction and to the satisfaction of the architect or employer's agent is beside the mark, and such reference is lessened in value by the alternative mention of the employer's agent, whom it would be unsafe to assume in every case would be skilled in the planning and designing of cottages. It is added that the chairman of the Advisory Committee admits that only a very small proportion of cottages are built or superintended by any professional expert, and the Council deprecates the alleged suggestion that it is the function of the Advisory Committee tode termine that only architects are qualified to design cottages in face of the claims and practice of other professions to do similar work.

What was suggested by the Society of Architects was that it is desirable that an architect's services should be retained, and not that members of other professions experienced in that particular class of work shall be prevented from doing it if the building owner prefers to consult them. The fact remains that the Advisory Committee in its report does not specifically express the view that the building owner should retain skilled professional advice of any kind. Certainly it refers to the desirability of "consulting a builder," but that appears to be in connection with securing economy by way of supervision; and, surely, the Advisory Committee hardly wishes to convey the impression that a builder is necessarily a skilled professional adviser on questions of planning and design? The chairman of the Advisory Committee, in the concluding paragraph of his letter, confirms the Conneil's views that the issue of the plans may lead to their use without skilled professional advice. and the suggestion that no architect would have been employed had these particular plans not be n available seems to us an untenable one. The main points raised by the Council were: First, that the Advisory Committee had not suggested the desirability of retaining an architect's services in carrying out its recommenda-tions; and, secondly, that the precedent set by the Board of Agriculture and Fisheries in this matter was unfortunate from a professional, that is to say, an architectural, point of view. Most cortainly, the Council's observations on the report still hold good, and in-justice has been done to the archi-tectural profession by the publica-tion of the report in its pre-ont form by a Government Department. That perhaps is a small matter! But the housing of the rural workers of the nation deserves more

#### SKETCHES AT THE CAMERA CLUB.

The committee of the Camera Club may be congratulated upon the sneess of their bold experiment in inviting a display of sketches by members. Each exhibitor was restricted to half a dozen frames, and the committee have evidently made a careful selection from the pictures submitted. The outcome justifies the expectation that many of our leading experts with the camera have attained their repute as a result of being able to compose a good picture, and have an eye for colour harmony, and no little technical skill in draughtsmanship. A good, if limited and somewhat unequal output of work, chiefly in water-colour, is on view on the club-room walls at 17, John Street, Adelphi, The best work of those sent in by W.C. The best work of those sent in by Mr. Marcus Adams is "A Street in Jerusalem." Mr. H. J. A. Bowden, now a captain on active service, sends a clever rendering of "Le Quai Vert, Bruges he has chosen the picturesque aspect looking along the canal westwards, with the steep Horse Bridge in the foreground, and to the right, peering above the rearward walls of the Palais de Justice and the Hotel de Ville, is the crown of the Belfry Tower. Another excellent sketch from the same hand shows "The Sand Dunes near from the marsh behind. Of Ostend Captain Bowden's three sketches in the village of Witley, near Haslemore, that of the old vicarage and adjoining cottages and the twelfth century church with its central oak-shingled spire, is the most attractive. Mr. Charles H. L. Emanuel contributes some impressionist views of the Cornish "St. Ives" and of "Pilchard Boats" in the bay, and also two works in silver reponsee, of which the better is the tier of superposed houses at "Montreuil." A penchant for effects of evening light and rain reflections is evident in the exhibits of Mr. E. T. Holding; in No. 21, " The Valley of the Teign, South Devon," the space given to the sky, for the display of enmuli clouds, and in order to convey the impression of a wide expanse of moorland landscape, is disproportionate; and the same excess in sky scope is visible in his Waxham, sky scope is Norfolk. Mr. F. J. Mortimer, whose name we associate with fine photographs of rolling billows and ships scudding under clese-recfed canvas, shows some colour schemes for magazine covers and programmes, and drawings in black and white of a French type for comic papers. Mr. Donald Macalister, now a Lieutenant the 19th Battery, Royal Garrison Artillery, has three exhibits, the best being a sketch in greys, browns, and greens of a formal old-world garden at Chideock Manor. Dorset, the foreground being prowided by a fountain basin, having in the centre a large stone bowl supported by three herons. The hon, secretary of the London Salon of Photography, Mr. Berram Park, is represented by half a dozen boldly executed panels in oil colour from his sketch-box. Perhaps the most attractive work in the exhibition is that in black and white sent in by Mr. C. H. ment at the Regent Street Polytechnic, who proves himself an architectural draughtsman of considerable ability. No. 38. "Caudebee en Caux." depicts the well-known Flambovant pieced Hewith head of the Photographic Departmasonry of the church spire rising over the houses of the main street. Next to it is a sketch in the market place at Wells Somerset, looking over the fountain towards the two Mediæval gateways in the close, with the central and south-western towers of the Cathedral ris-ing above the roofs of the old shops and of Heaven," and the full length of the

houses between. Another careful drawing is a view from the north transept into the a view from the north transept into the massive Norman nave of the Church of St. Cross, Winchester; "near by is one of the delicate thirteenth century pillars against a broken pier in the south transept at "Netley Abbey," in fine contrast to the bulky circular shaft and scalloped capital of a Late Norman pier at "St. Bartholomew's, Smithfield." Mr. Alex-Bartholomew's, Smithfield." Mr. Alexander Keighley shows some Italian landscapes, vigorously rendered in monotype. Eustace Calland has been sketching on the banks of the Lake of Geneva; his Glion Sur Montrenx" has a background of serrated Alpine peaks enhanced in effect by the water below; and No. 46, limned in the same neighbourhood, portrays the village, and detached by heaving clouds are mountain masses looming against the sky-line, an entrancing atmospheric effect very familiar to all visitors to the shores of Lac Leman. Of the works of Mr. Walter Thomas the best is "Early Morning, Cornwall," a vision of a line of inhospitable granito cliffs viewed over a foreground of angry sea.

#### A SCULPTOR'S PHOTOGRAPHS OF REIMS CATHEDRAL BEFORE AFTER THE BOMBARD-AND MENT.

An exceedingly interesting and exceptionally fine assemblage of large photographic pictures and studies illustrative The Glory that was Reims" is now on view in the Leicester Galleries, Loices-The views were all taken ter Square. by the cathedral sculptor, who has had charge of the statues and carvings of this church during the past twenty years prior to and since the Germans wrecked the building. The walls and screen of the gallery are devoted to the display of 113 subjects, but the entire series actually numbers 200 pictures, the remainder being shown in the folio or on the table in a second room.

The prints include general and detailed views of the building from different standpoints showing the church before the bombarding took away the roof and battered the windows and walls, besides smashing much of the sculpture. Several more recent photographs depict the fabric as it stands now, including bird's-eye views looking down on to the top of the nave groining left open to the sky and roofless. The northern portal of the west front in its denuded condition, No. 88, is a particularly well lighted and artistic photograph, the débris in the foreground adding much to its pictorial effect. "sad and sorry" as the destruction wrought on so grand a masterpiece must for ever be. No. 3, taken from the northwest, shows the cathedral of Reims in all its glory, with the pride of its western portals intact—perhaps the noblest example of Early Gothic in the whole of France, with its twin towers 267 ft.

 $\Lambda$  grand set of detail photographs, each 23 ins. long (Nos. 11, 12, 15, 16, 22, 23, 26, and 27), add much to the copious illustration of the iconography of the great porches, and these again are further elucidated by special studies of individual figures or parts, such as the pair of prints, No. 8 and No. 40, of "La Viergo de la Visitation," the former detail illustrating the lovely features of Our Lady and St. Catherine (more advanced in years), both modestly draped in a sculpturesque style almost Greek in the manner of its refinement. No. 17 of Notre Dame de Reims," of which M. Rodin speaks in such unmeasured praise,

infant Christ held on her arm. This exquisite statue has been badly mutilated by the German shells.

oy the German shells.

It is not easy to select special prints for notice where there are so many, and all so very good, but No. 6 for its subject—the Tympanum of the "Romanesque Portal"—has attracted much attention with its carved responds and angel filled semi-circular each under which in semi-circular arch under which, in a recessed canopy panel, are seated the Blessed Virgin and Child. The set of three pictures hanging in situ 42, 43, and 44, furnish perspective pictures of the three great west portals. Nos. 49 and 85 are devoted to gargoyles. The first shows King David seated playing on the harp above the grotesque sort of rhinoceros with its metal-like treated snout. The second print illustrates in sharp perspective a series of cattle, with the lead lining of the troughs in their bodies nearly dressed over the masonry on top of each beast. The big heads of SS. Peter and Paul (62 and 66), from "The Portal of the Last Judgment," are immensely decorative and fine, and so are The the carvatides of the west front. interiors of the church, such as No. 7, of the northern transept, with the organ over the doorway, are very valuable as illustrations of the beauties now gene. Many readers will be glad to hear of this exhibition, which will remain open during August.

## SCHOOL OF ARCHITECTURE EXHIBITION, UNIVERSITY COLLEGE.

An exhibition of students' work, done during the session of 1914-15, is on view this week up to Saturday next, the 24th inst., at 5 o'clock, in the school attached to the University buildings in Gower All who are interested are ad-Street. mitted free of charge. We illustrated the new premises and studios specially erected for the School of Architecture not so long ago,\* and this is the first entire session held in this new building since its completion. This has not been a very propitious year, owing to the war, for the normal conduct and consequent success of any school devoted to the arts of peace. Professor F. M. Simpson's expenience, however, has not been singular; m all sides we hear of young men having to leave their class-rooms and studios. This, therefore, must not be overlooked, though we are far from saying that this display is marked by indifferent merit or paucity in the amount of work accomplished even if brilliance in design may, perhaps, be said to be conspicuous by its The average standard nevertheless, been maintained, and a highly creditable show is now made. The principal events recorded are the results of two competitions for prizes given by Sir William Lever for the encouragement town planning, the scheme being divided into two stages under the newly founded Department for the study of this subject. No. 1, a scheme for a central railway station on the Surrey side of the Thames, and No. 2, for the "architectural development of a portion of the above. In the premier contest Mr. A. G. Wood is awarded the first prize of £15, and Messrs. H. N. Fisher and L. H. Shattock are bracketed as equal, the money prize being £10. The winners in the second competition are not by any means identical with the first, as Mr. II. N. Fisher takes the £15 prize, Mr. Ignace Reicher the £10 prize, while Mr. A. G. Wood has an hon. mention.

There appears to be some discrepancy between the station buildings' plans shown to the smaller scale on the town

- December 5, 1913.

planning lay-out scheme, and the plans worked out presumably as an architec-tural development to a much bigger scale. The portions thus amplified in neither case seem actually to correspond. The shapes of the block of buildings in the second stage appear to bear no reference to the planning of the station included in the first stage. The drawings are hung at the extreme ends of the great studio, very far apart from each other. and, therefore, are not easy to compare.

The station chosen by the winning competitors is intended to be built at Waterloo, an ideal problem formulated without regard to finance, and entailing several changes of enormous magnitude. It would hardly be possible to describe these designs in detail, except at great length, for which we have no space. Mr. A. G. Wood has conceived a very interesting and ingenious proposal for rearranging not only the station itself, but the contiguous railway system of lines and new approaches which would necessitate another bridge over the Thames from the Temple, the other two ways being from Waterloo Bridge and from Hungerford Bridge, all three roads being brought into a Grande Place fronting the station. the quadrant train tracks being behind Stamford Street and York Road. St. George's Circus would be reached by an in-clined continuation of Waterloo Bridge Road going seemingly through a subway and emerging a good way down south, beyond the limits of the station rendezvous. We need not discuss this project further save to add that the scheme as such is quite worthy of the first place. Messrs. Fisher and Shattoch deal with the same problem rather differently, while some of the other town planning competitors have chosen Victoria Station or the G.W. Avenue island site at Shepherd's Bush, the King's Cross improvement, or the N. circular road at Hendon, much adroitness being displayed and serious solutions being fairly well aimed at, considering the early position of this Town Planning Department now in vogue at University College.

The most ambitious part of the exhibition is devoted to the enlarged designs for the railway station buildings, and it is a matter of regret that Mr. Wood happens to have come in third. Mr. H. N. Fisher's plan is accorded the prize, and it deserved this distinction. Waterloo Station, according to his scheme, would present an enormously long façade, the building being a detached rectilinear parallelogram, with a central entrance in front and secondary entrances at either return end. chief portals consist of three semi-circular archways, with iron and glass weather pents projecting level with the springing course, and having a clock attached in the middle co-ordinate with the tympanum of the central opening. All this is very American in manner. There are three doorways to each arched span. Above the arcade rises an hotel with an Ionic colonnade of nine bays set between two pilastered pavilions, and finished off with an inconsequential-looking and shaped blocked skyline. Low side wing buildings extend right and left, with the attic-like plain walls and the semi-circular ironframed roofs of the pair of big waiting-rooms well recessed behind the frontageline. Each end of the whole frontispiece terminates with pilastered tower-like blocks. having similar archways below leading to the Customs departments. The ground stage is in keeping throughout, but it does not go well with the superstructure, which looks stilted. The plan is well lighted, and in many respects well thought out. The great central booking-hall encloses a particularly spacious ticket-office for the main lines services, the tube and suburban four ticket offices being in small square

places, one at either corner of this big enclosure. The waiting-halls, right and left, measure 206 ft. by 76 ft. each, with lofty proportions to match. Two wide, long corridors run the entire length of the building, and have cross exit doors, two in each flank, at the ends of the front restaurants. A pair of inquiry offices are placed in each corridor, with columned halls intervening behind them and set between the two big waiting-halls and booking-office. No seating accommodation is indicated on the plan, and we look in vain for the essential conveniences for travellers and their waiting friends. Restaurants, smoking-rooms, and ladies toilet rooms face the Grand Place, and men and women's lavatories (not suitable for closets) measure 45 ft, by 32 ft., with windows adapted for one room only. These are placed next the Concourse of the station, along which main side come the luggage and minor waiting-rooms, amply large enough, perhaps, for everyday needs without the big halls. At the ends are passengers' corridors and exits from the main lines. The company's station officials' offices are situate far apart at the ends of the building on the first and upper floors, cut off from each other rather seriously some hundreds of feet away. The entrances to the hotel are put on either end of the station entrance vestibule, which figures 136 ft. by 40 ft., so that all hotel visitors have to more or less mix with the traffic on going in and coming out, with their bags and baggage interfering

with the hurrying public.

Mr. Ignace Reicher, who wins the second prize, has given his building a distinctly foreign appearance, with its vast semi-circular arches leading to the booking-office, set in the midst between two projecting wings, and measuring 60 ft. by 36 ft., with galleries round. Columned café and restaurant rooms flank this body of the premises, with adjacent waiting rooms and such-like all crudely laid out, with a departure vestibule in front of the booking-hall and Concourse platforms at the ends of the premises, right and left for arrivals, far away from the ticket-procuring places. On the main Concourse are two four-square detached blocks of buildings, consisting of waiting and retiring rooms. The elevation is poorly and heavily coloured. There is a fairly good detail, but the figures for sculpture are indifferently drawn. No hotel is attached

to this station.

There are only two other designs, Mr. A. G. Wood's being given an Hon. Mention. His is by far the better of the pair; indeed, we prefer his scheme to the plan placed second. Architecturally, it is more English, consistent, and refined. A fifth elevation in pencil is shown, but seemingly it has no plan, for none is exhibited

The "first year's students" work we thought commendable, and we noticed some almshouses and homes for the aged in a Georgian style by Messrs, H. W. Cash and C. C. Nauheim, the latter's work being based upon the well-known Black heath type of similar housings. The post-office at Wells is shown carefully measured up and plotted, also a good sheet of pen-and-ink details of the chapel door, Greenwich Hospital, but the authors names of these drawings were absenred.

#### ARCHITECTURAL ASSOCIATION PRIZE WORKS EXHIBITION

On Friday last the annual awar is wellannounced and the collection of societas drawings exhibited to pards view on the Royal—Architectural—Massim—Tatter, Royal Architectural Massim Tarres, Street, Westiminster, as the result of the year's course in the London Science of year's course in the honden sense, of Architecture. The display, it not so numerons as heretofore, is certainly very reassuring, and though a good namer. including some of the more brilliant men. have been called away on military duty. the work done in their absence is workmanlike and highly creditable, judging by this present exhibition. The prizes awarded are not given for any individual competition design upon which a special effort is concentrated, but are taken in recognition of the merit displayed by the winners throughout the whole session, Sustained effort is in this way encouraged in accordance with the system maugurated long ago at the Architectural Association. and we need hardly say it has always had our warm approval.

THE A.A. TRAVELLING STUDENISHIP

is taken by Mr. Wilfred C. von Berg, a gentleman of Dutch extraction resident at Croydon, but who has recently left the school to join the English forces. The subjects of his designs, common to the whole of the students in the third-year course, are those set from time to time by the master, Mr. Robert Atkinson, F.R.I.B.A., or perhaps by the assistant master in this grade, Mr. L. H. Bucknill, A.R.I.B.A. These problems necessarily are varied, and not necessarily of a tour de force character, though perhaps more than often of rather a monumental kind, as, indeed, seems inevitable. The reserve displayed by Mr. von Berg is one of his essential merits, and the reason, perhaps, of his success; while his draughtsmanship is excellent, based on the Parisian model. The triumphal arch he submits has a bronze equestrian group of six horses in a chariot surmounting the composition, which displays a pair of trophies on the face of the main walls. The Lord Roberts Memorial consists of a truncated obelisk of elegant outline and detail. The areaded courtyard shown for an Italian palace steers clear of marked originality which too frequently degenerates into the bizarre. The entrance proposed for a museum has twin columns of a Composite order, with bronze deors and standard lamp-like bronzes flanking the nortal. Another ambitious project is the plan of a council house, with division lobbies at the sides and a members' hall behind the council chamber. Coming down to more mundane matters. Mr. von Berg has designed a small country house having a large common or living room, with a loggia opening into the garden, and the dining-room leading out of the livingroom - an excellent idea to save service and space, provided the meal-place is not too large and is really more like an alcove-This plan suffers from insufficient light to the common room, which is sa reficed to the façade, so as to obtain breadth. The result is somewhat stilted elevationally. and the landing is wasteful. The exterior is in stock bricks, with red vertical divisions, presumably "Georgian." Mr G. B. Tubbs' house on the other wall is a more practical scheme, if we except his A memorial, erected by subscription, to the late Dr. Mongle, physician, who for over twenty years practised in Kinross and district has been unveiled at Kinross. The memorial consists of a drinking fountain, surmounted by a bronze portrait bust of Dr. Mongle, which was designed and executed by Mr. John S. Rhind, sculptor. Edinburgh, and is erected on a site at the corner of Graham Street and Swansacre. dark store out of the kitchen, with no vonface below. pair of arms at the ends of the plinth. The memorials of the departed should rather aspire to indicate life eternal and express at least a hope in futurity. So many menuments look like refrigerators.

THE JAMAIS SILDENISHED of £40 is desert, by awarded to Mr. C Dranden, who is represented by capital set of drawings, not Jernaps quite so a compassion in style as these by Mr. on Berg, out workmanine and renation His everstree, bringe connecting two papers trainings is quest and appreten tions and this quality also is observately th the things sailed for a pata day of stream, though perhaps some of these ratter designs on view are apt to and the commonplace. Mr. firm the street and street façade in street same and street façade in street is well thought out. The swags over the decreasys would be better away. The Andrew Oriver prize of 25 5s. 1s taken by Mr. F. P. M. Weothouse, whose work is distinctly reditable. His time study for a brick-out t s reen in front of a big courtyard is worth naming, done as it was without help, and we rather prefer his artidealer's street front with the marble treatment on the ground floor round the shop, and we like the iron balcony over, below the three arched windows on the first floor.

Mr. J. C. C. Bruce over-emphasises the length of his lintel or hidden girder above the shop opening by including both the side doors into the one wide-spanned space which he divides up with bronze uprights, adding some horizontal bars which dwarf the effect where more height The upper handling of this is wanted. front is on the right lines. The Italian palace courtyard by Mr. G. B. Tubbs is one of the best and the street front sent by Mr. C. Reixa is studied on old 18th Certury hines, though the big spandrel window on the second floor niight make many difficulties mable, above the triple lights below, divided by Ionic columns. Mr. G. B. Tubbs is more spirited than some with his bridge, having an Italian pavilion or covered way very open at the sides. His cemetery tomb sketch is fetching and forcible, but the trees suggest a site in a vast park where land is of no moment The pretentions baldachino for a catheural high altar by Mr. T. C. Evans is too ambitions, not to say a bit out of hand, with its twisted columns and gilt rococo canopy very out of drawing.

IN THE SECOND YEAR CLASS

Mr. A. Holes carries off with relat the Howard Colls prize of £15 15s. His parqueting half overlooks a formal garden and marble-enclosed pool, with rather attenuated columns to the side verandahs. The study of a courtyard after Mansart and the court of a French château are very praisworthy on right lines of study thatched bottage is pleasing, but whether a compact and almost onle-shaped cottage is suitable for thatching seems doubtful, the material suggesting a haysta it or a long, ramiding, quaint sort of building. Mr. W. P. Wigglesworth is a clever student with an excellent de sign for the dining hall in a park, though I' is no doubt over rich with the range of statues above the parapet and columns The Italian Rebetween the windows. naissance composition of an arch showing Santa Maria della Salute at Venice bevend in the distance makes a 2 sol drawing for a student's trial. We noticed Mr. G. A. Galsworthy's château front of XVII date, with the arched entrance, all well theories like red herrings across your path. Stablied on precedents Mr. P. M. Hill's Have absolute confidence in your teachers

The cemetery temb set in a French dining-hall design in brick and tree alcove is not exhilarating, with the stone has end pavilions breaking the roof, but they scarcely project enough for that. The orangery by Mr. W. E. de Souza and another by Mr. P. E. V. Maager deserve attention, but Mr. Hodge's orangery is the best, and his details are workmanlike. The Entrance Scholarship drawings by Mr. J. L. Shepherd admit him to the school, and so does the winning of the Banister Fletcher Scholarship by Mr. Jean Gelwin.

PRIZE DISTRIBUTION AT THE A.A. SCHOOL OF ARCHITECTURE.

The annual meeting for the distribution of earnizes gained by the students of the Archi the prizes gained by the standards of Architecture was hold at 16. Tutton Street, S.W., on Friday afternoon, Mr. H. Austen Hall, F.R.I B.A., the President of the Association, occupied the clear, and owing to the depletion of the school by war conditions, there was a much larger number of old members of the Association and friends of the students (including

about a dozen ladies than of young men.
In opening the proceedings, the President remarked that since they met for a prize disti bution twelve months ago much that was then unexpected had happened, and their then unexpected had happened, and their school of Architecture had been greatly affected by the war. At the very onthreak of hostilities, early in August, they lost by recruiting for our new forces four masters and about hity students out of the seventy then on the roll. Fresh students came in during the session; but many of these and others of these who temained were drawn away by the those who remained were drawn away by the recruiting officers in the next room, so that they were now reduced to five-and-twenty, none of whom were eligible for service on one ground or another. Some of those still with them had tried three or four times, but with out success, to enlist. The year had thus been one of exceptional worry to all concerned for its and success, and they had furtherusefulness more a difficulty in arranging lecture courses on account of the absence of masters and the constant diminution of and changes in the Under the unprecedented circumstudents. stances, the quality of the work that had been turned out was remarkable. The standard turned out was remarkable. The standard and character of the work had been well maintained; the masters and men had alike set themselves to their studies with determination, and the Council were gratified, nay delighted with the outcome, and thankful to Mr. Robert Atkinson, head-master, and his capable staff for what had been accomplished. Some of Some of the masters and men had been granted com-missions in the Army, and others had as loyally served their King and country in the ranks. There was a sad side to the subject in the casualties reported. From their first year men. Mr. R. W. Wilson had been killed from their second-year students Mr. J. D. S Othell was reported wounded and missing and the Hen. Anthony Methuen was wounded: from their third-year class Mr. H. A. Ryan and Mr. J. H. Jacob were wounded and two members of the evening school, which he might incidentally mention had been necessarily suspended during the war. Mr. T W. Donald and Mr. H. D. Ainsworth, had been killed. Addressing himself to the students present, the President continued: The great edgect of all study is to reveal truth, and to you as students it is also to obtain a standard f padement and of comparison, whereby to arry on, at a high level of thought, the art here are surrounded from the first day of your entrance into the school with the presentation if the finest known works of architecture. You have in the masters who direct your studies men who are enthusiasts, men who put their work before everything else. It is not surprisand the one everything else. It is not surpris-ing, therefore, if you find enthusiasm comes easily to you, and, above all, if it comes soon. Those of us who have had these advantages are fully aware of the incalculable value they will be to you, and through you to the development of architecture in this country. Most earnestly would I say to you. Do not be discouraged by those who criticise the ten-dency in modern design, and throw their

and m yourselves, and do the best that is in you. On the foundation of the culture you me acquiring the future of your art will sale. Four ceaseless efforts must be to express the highest conception of design you may eyet received, and to accept no lower standard than the best in whatever work you undertake.

Mr. H. M. Fletcher, hon. secretary, read the following list of prizes and studentships, warded by the Council, which were distributed to the students by Mrs. Austen Hall. Mr. H. M. Fletcher, hon. secretary, read

First YEAR: First Prize, value £1 10s., V. J. Wenning. Second Prize, value £1 ls., H. E. Mills. Prize for Greatest Improvement, Volume of A.A. Sketch Book, F. A. McEvoy. Special Prize. Volume of A.A. Sketch Book, W. B. January.

W. B. dancee.
St. OND YEAR:—"Howard Colls." Travelling Stadentsnip. value £15 15s., A. Hodges. Second Prize, value £5, W. P. Wigglesworth, Prize for Greatest Improvement, value £2, W. E. do Souza. Master's Prize, F. W. Halfmide. Special Prize, volume of A.A. Sketch Book, P. V. E. Mauger. The Association Two-Year Course Certinicate is awarded to the following students:—G. B. Galsworthy. F. W. lowing students: -G. R. Galsworthy, F. W. Hartinde, A. Hodges, P. M. Hill, P. V. E. Mauger, W. E. de Souza, and W. P. Wiggles-

worth.

Thed Year: —A.A. Travelling Studentship, value £25 5s., W. C. Von Berg. Andrew Oliver Prize (value £5 5s.) and President's Prize (value £5 5s.), F. P. M. Woodhouse. Book Prize, value £5 f. Reixa. Book Prize, value £2, N. F. C. Day. Master's Prize, J. C. C. Bruce. Master's Prize, G. B. Thbbs. Vacation Prize, value £1 Is., F. P. M. Woodhouse. Vacation Prize, value £1 Is., C. J. Brandon. "Jarvis" Scholarship, value £40, C. J. Brandon. Special Prize, two volumes A.A. Sketch Book, b. H. Hutton.

FOURTH YEAR:—Special Prize, value £5, R. A. Duncan.

Duncan.

A. Duncan.

A.A. Essay Prize, value £10 10s., T. C. Evans. A.A. Entrance Scholarship, value £52 3s., J. L. Shepherd (Charterhouse).

Banister Fletcher Studentship, value

"Banister Fletcher" Studentship, value £23 ds., Jean Godwin.

The following have been recommended for Third Year Certificates of Exemption from the R.I.B.A. Intermediate Examination:—

N. F. C. Day, G. B. Tubbs, F. P. M. Woodhouse, and F. Reixa.

Mr. Ernest Newton, A.R.A., P.R.I.B.A., in proposing a vote of thanks to Mr. Austen Hall, said he feared that Mr. Hall, in giving him that privilege, thought that as President of the Royal Institute he not only ought to be able to speak with authority on the future of architecture and the aims to be pursued in teaching students, but that it was his duty to do so. Unfortunately, election to the chair at 9, Conduit Street did not carry with it in his case a gift of tongnes or prophecy. He had seen in his lifetime so many movements all of which were said to be destined to be permanent, but which had had their day and passed away, but at the risk of appearing to shirk his task of pronouncing ex cathedra on a subject which all of them thought about and which none of them considered they had yet solved, he should confine himself to a few general remarks. Was he not right in assuming that vaguely they had in their minds that some form of Classic was the right thing for large monumental huildings? For churches they balanced between a Classic and a Gothic form, according to their temperament. In designing houses they left themselves the greatest latitude. That in itself should be enough to show that architects now in practice had by no means made up their own Speaking for himself, his admiration for the teachers of architecture who would keep their heads and pursue a definite aim amidst this confusion knew no bounds. to teach composition, construction, and the forms and leatures of every known style from the Parthenon to the buildings of the nineteenth century, which architecture had been so much "revived" as to be practically moribund. One often saw in modern Clas sical buildings certain radical errors which he was sure were never acquired at the Ar chitectural Association. For instance. building of several stories which was merely a nest of smallish rooms of moderate height was often treated like a temple with columns and entablature complete. Let them examine the plan, and they would see how perversely ingenious the architect had been in getting windows for his rooms behind the entablature. Now surely all would agree with him that however fine the proportions delicate and learned the details of such and deflecte and learned the decars of such a building might be, it was wrong as archi-tecture. Then, again, this same type of building would have charmingly designed features, pavilions, pediments, and so forth. apparently marking something in connection with the plan, but comparison with that plan would show that they were merely stuck on as part of a composition. A.A. students would never do that when they were entrusted with the edifices of the future. They would always, he was sure, cast their buildings in a gracious mould and make their composition express the purpose of the fabric He was sure that students at 18, Tufton Street were taught to analyse all the features of the various buildings on which they based their essay designs, and were made to understand those features belonged only to that particular building where they occurred, or to one of a like nature, and ought not to be annexed, as part of the designer's stock-intrade as an architect, to appear in all the buildings he might be called upon to design in the future. Another point was that modern buildings generally had as many features to the square inch as old ones had to the square yard-even more sometimes It was a great art to leave out—not because one did not know what to put in—but because one did not want to put it in. In designing a building, the indiarubber was often a more useful and valuably ally than the pencil. He had not touched upon the influence that material must have upon design, nor had he alluded to the necessity for grappling with a problem and solving it fairly and squarely without tricks and sub-terfuges. Even if the result was ugly, it would at least be true. As for the study of modern planning, that was a chapter by itself, and he must not venture to refer to it in a vote of tbanks. There must, for in-stance, be a best arrangement for all the stance, be a best arrangement for all the departments of municipal buildings, just as there was for the parts of a ship—the right kind of entrance, the best position for the council chamber, and so on. If all this could be standardised, what a simple task a competition would be! All that the architect would have to do would be transfer to the contract. would have to do would be to perfect per fection. When one considered how much there was for an architect to learn, it was almost incredible that anyone should have the courage to begin. Indeed, to be serious, there must be something in the discipline of an architect's training that made for courage and a sense of duty. Some sixteen hundred members of the profession had given up all their prospects as architects to become soldiers, and no doubt before next session opened many more would have fol lowed their gallant example. Many architects had already died for their country, but no one who died for his country had lived and died in vain. They could not tell what the future had in store for them, whether next year there would be any prizes and prize giving, but that afternoon the front was engaging their attention, and in very cordially proposing a vote of thanks to Mr. Hall he was to be allowed also to congratulate the prizewinners.

Mr. Arthur Keen, past-president, seconded the vote of thanks. As a member of the Board of Education he had examined the testimonies of study submitted by candidates. and had been impressed by the high standard of the designs sent in from the Tufton Street School and by the capable grasp of the problems shown by the students. The quality of the A.A. School work reflected the greatest credit on the teaching of Mr. Robert Atkinson and of his assistants. He felt that their headmaster was the right man in the right place. Students who loyally and industriously worked in the School were laying a very good foundation for a successful career in future years.

In memory of his late wife, Dr. Godfrey owe has given to St. Peter at Gowt's Church. Lincoln, an oak altar table, which has been made by Mr. C. R. Lucas, builder, Sibthorp Street, Lincoln, in keeping with the design of some of the late Mr. Hodgson Fowler's work in the chancel.

#### BUILDING NEWS DESIGNING CLUB.-A GARDEN PAVILION

On the whole possibly "September Morn presents the more attractive and picturesque design. His drawings are set out well on the sheet of paper, and the building bespeaks its purpose unmistakably. We also must give him credit for the superiority of his perspective sketch, because in a competition of this kind among students a recognition of draughtsmanship ought to obtain its due. We would rather select a good building indif ferently drawn than a poor building merely adroitly delineated in a chic sort of manner. The general rule, however, is that good drawing and good design synchronise. We are not ing and good design synchronise. likely to place too much stress upon draughts. manship per se, neither are we overlooking the painstaking care displayed in the execu tion of the geometrical elevations submitted by "Walbroke." He is mostly workmanlike, and neatness induces accuracy of detail. Qualities of this sort are highly praiseworthy and indispensable. The treatment and manner or style distinguishing the proposal placed second, if not exactly of a high order, bears comparison in many ways with the desig sent in by his confrère "September Morn. Hence some diffidence in arriving at our ultimate selection for the premier place, not that we doubt this decision as a proper conclusion. Some may question its rightness and others may consider we had little choice, which is true enough. In some particulars the lay-out of "Walbroke's" façades is preferable. out of "Walbroke's" façades is preferable, specially in the spacing of the west end, where the arched opening more consistently forms part of the sturdy rusticated plinth. The casual fashion of the arch treatment adopted by the other designer is not altogether happy. At the same time, "September Morn" has realised our intention by making the long side of this summer house overlook the lake, which is, of course, its principal prospect. The conditions are distinct enough. They provide conditions are distinct enough. They provide that the approach to the pavilion is to be on the land side, with a way down to the boat shelter under the entrance steps. No mention whatever is made of the land end. The build ing properly ought to present its main façade to the east, to be viewed from the owner's house over the water. The pavilion, in fact, is considered as part of the property in ques tion. By thus setting out the boathouse alongside of the shore of the lake a much wider creek is insured than could be possible when the waterway is reduced by its contiguity with the much more restricted end of the The conditions mention an environ ment of willow trees, common to such a site, close to the pond. The "pictures" of both close to the pond these designs avoid such specified ambrosia details. "Walbroke's" perspective in this respect looks derisory, and the foreshore as shown might be mistaken for the fag end of a litter heap or perhaps a bit of a disused slate quarry. By locating the building the wrong way round about with reference to the lake he has made his scheme somewhat irrelevant

Undue importance must not be attached to incidental matters such as pictorial draughts manship. Still we cannot refrain from acknowledging that neither of these perspectives precisely display the eagerness proper to a "sketch," and all sketches ought to be artistic, even if only roughly so. It is too common a fault with many that they set up to be "artistic" without being artists. The to be "artistic" without being artists. The word "artistic" has been tabooed by architectural professors who reckon themselves authorities beyond a doubt, and the term for that reason by a certain cult is banned. No other word, however, actually expresses what is intended. Success depends upon the artist being possessed of his subject before it can come off, and the work must not express a trifling mood, however slight in execution the work may be. It must have some true grit about it and evince a force compelling its expression. "September Morn," limited by his conventions and laboured effort in design, has vet to comprehend architectural relevance and dignity in composition. Correct ing, he fails by non-attention to detail. he gives us nondescript windows instead of mullioned windows bargained for. The spacing of his lights is not in conformity with spacing of his lights is not in conformity with pipes and deep cesspool heads to match, figure what is customary to expect, and when he in "Walbroke's" drawing, and we suppose does employ mullions the result falls short of the tubes turn in through the wall above the

any improvement up in the containty out setting out window (penings A ) and the middle of the beg wind w might be middled his preportions and a ideal character thus justifying itself. The fene-trated in "Walbroke's" scheme is mean note on "Walbroke's" scheme is mich in the con-sistent. "September Moth' in the line in-portance of another item viz., where the chimney in the back elevation rises above the broad and quoined fireplace breast projecting between the two doorways. The ince emphasises the position by breaking round, as it must do, to preserve the full section throughout. This solitary smoke flue in consequence appears to be stuck on, and looks paltry and thin, set up in this mean, awkward fashion. By omitting to include a back costa-tion "Walbroke" fails to show his method of managing this same little ticklish detail so conspicuous on the "off side" of his building. The end elevation submitted by him ing. The end elevation submitted bedoes, however, include a stone topped pediment, or something of that kind to ease off the architectural lines, but as to how this is actually to be done we are left to conjecthre. We have noticed the inconclusiveness displayed by the elevations of the design which we have put first. For instance, the author has not made it clear whether the brick facings really run through to the reveals of the windows or not. He has been at some pains to show the headstones and sills in rather an ostentations or, shall we say, emphatic maner, and so the inference would be that masonry dressings to these openings are intentionally omitted. If this be so, the upper and lower blocks of stone would suggest a spotty effect in execution, and particularly so should white stone be used for the lintols and sills, and the difference of colour happen to be intensified by employing strong and selfassertive red bricks for the walling. The importance of texture imparted by the choice of barmonising materials is frequently overlooked, and not enough care is taken in setting out the proportions of solids to voids in architectural conceptions. These deductions may doubtless be elementary, but certainly architects seldom realise their consequence, and likewise omit to avoid the objectionableness of spotty masonry or of fussy detail. Faults like these result from a want of native artistic sense. Party colourings are considered hand-some, and vulgar contrasts appeal to the ignorant, who know no better, but architects ought to do so. The colour blind are hopeless whatever pretensions they make to capacity in designing.

The pair of deorways in the pavilon by "September Morn" are not in accord with the dignity of the double set of steps and terraced approach. The effect seems inconsequential, and by starting the stairways close up to these openings the result is not only awkward, but positively dangerous. The boat-house landing stages provided in this design look more serviceable and furnish better access to the boats, which in coase quence are less cramped for room than in "Walbroke's" sheller, with its farr w "end on" allowance of space. The latter scores a point, however, by sliding his ir or gates back, right and left, on the more face of the plinth wall. His competitor has saved himself the fag of thinking out such its dental requirements, and he also has not dental requirements, and he also has not bothered to show how the projecting external face of his plinth comes in relation to the extrados member of his arch where the set off dies on to the segment of the pening. These minor details and various things serve to constitute the press and cors about these up to these openings the result is not only to constitute the press and cors about these designs creating the doubts already all ded to in ascertaining their relative meres in this to in ascertaining their teactive mere's it it is little contest. The proportions and governal effect of the roofs and clock purrets tell in favour of "September Morn" With this conclusion the parapet to the clovar in submitted by "Walbroke" has a direct concern. The absence of rainwater heads and down pipes scores, on the other hand, against the scheme which we put first. An eaves guttering is drawn by "September Morn," but he rests content and we are uninformed as to how the water gets its discharge. Carelessness of this kind is blameworthy. Big stack

by the r of water into boat pina: The piter, i treatments, so far pather from the sections of these 11 ch s, may be taken on the average TWO THEY as about a constant we recomb oth are rather meffective and management 2. The symmetri cal repetit, in of the windows in the second placed building might be expected to insure a more digitated result, as the other plan leaves too lift c wall space for the wainscot-ing. We are disappointed with both prerutus respect, and the ceilings, of which the conditions made a special note, are which the changes shade a special poet, are very jet. The circular disc in the middle of "Waller se's colling is common-place in least of access to the clock is sentiarly a year for in each scheme, with space for the bels and chiming gear.

This is the concluding subject of our Club's wirk for 1914-15, and although the problem was the easiest proposed during the past unual session the number of designs submitted happens to be by far the smallest ever known since the Building News Designing Club commenced about forly years ago. For this time of the year the proposal was reasonable enough. but owing to "the emergency period" through which things are passing an abnormal abarement in the work of the members was only to be expected. Their energies bers was only to be expected, their energies have naturally enough been diverted from the pursuit of the arts of peace to the patriotic task of helping forward the defence of hearth and home. In so far as this particular competition for a Garden Pavilion is ticular competition for a Garden Payinon is emerical, though "the spring tide has been form out of our season," the situation was savel by the receipt of the two capital schemes sett in by "September Mora" and "Walbroke, "those well-systamed endervours to the last merit unstanted approbation, seeing that the last merit unstanted approbation, seeing that they both made time to compete not withstanding their many other engagements The following is a copy of the conditions issued for the guidance of members: A Garden Payiron at the end of a lake, which also is to form a shelter for small rowing boats, the approach to boat-house being formed by a small creek flanked by willow-tress, which do not encroach upon the level site, the shore being 4ft above the water-line. The floor of the pavilion to be 5ft above the ground, at directed by stone steps. the treatment architecturally to be Georgian. in red brack and stone. Qu'et dignity in design is required, and the roof, overed with green slates of graduated sizes, is to show, and a simple clock turret, with chimes, may rise from the ridge, and be covered with lead. The size of the pavilion made to be 30ft. by 15ft , with a dreplace, and below, a fuel store of small dimensions to be provided. Inside the walls of the pavilion to be panelled in oak, and a decorative plaster ceiling is intended, with frieze, but not too ornate. The windows to be multioned in stone, and have metal casements. The boat shelter to have wrought from gates above the water line, and small meeting timber stage at the back inside, with approach from the land side under the pavilion steps. Scale 4ft to the inch. Two plans, three elevations and one section, with perspective sketch, taken from the lake side. The building will face east, and can be seen over the water from the house to which the property belongs. The accompanying drawgroup by new ags. The arcompanying unawa-ings softice to indicate the attractive cha-racter of this undertaking, which lends itself to a pretty inventiveness by affording scope for the limagnation and display of unassum ing taste withour unduly taxing effort or calling into relation very much specialisation However, like most simple things, a garden However, like most simple things, a garden payment is not unite so easy a subject as would arrear at first sight. Such an occasional and in a unional structure demands a degree of reserve coupled with a cultured appreciation of architectural attainments to give a new regard to the uses of the the 25% of our regard to the uses of the belief 25% of the belief 25% of the reverse stell is so small that it requires to be handled in a big way without being a large. All straining after novelty from so, we sake has to be avoided to the control of the contro novels, if r 78 we stace has to be avoided, and no traffing with in sherest detail is allow able. Such a f small r by he reckoned, perhors, as ideal, and we do not claim that the losins now put forward exactly or even

approximately reach that standard. Both the competitors rank very closely, and considering the plans on their merits a perspections decision was hardly likely; indeed, as we have said, some difficulty occurs in stating reasons for a preference in favour of either.

#### NATIONAL FEDERATION BUILDING TRADES EMPLOYERS OF GREAT BRITAIN AND IRELAND.

The half yearly general meeting of this federation will be held at the Masonic Hall, Great George Street, Leeds, on Wednesday, the 28th mst, at fen in the forenoon, to deal with the business mentioned on the agenda.

with the business mentioned on the agenca.

1. Notice calling the meeting
2. Minutes of last annual meeting, held January
27, 1945, and business arising, if any,
28 Welcome to representatives from colonial and
foreign rederations.

4. Ropert. In accordance with decision of a
former meeting, a short interim report will be submatted to the meeting and published in the N.F.

e ord.

7. Consider recommendations from yesterday's outed on the following matters:—

as Report on apprenticeship question, (b) Report on contract conditions with local

on organic on contract conditions with local authorities, in Resolutions of the National Board of Conciliation:

"That this board, recognising the difficult position in which both employers and workmen in the binding trade find themselves, in consequence of the high cost of materials on contracts taken before the war, and of the high cost of living in consequence of the war, recommends that the National Federation take into consideration the position with a view, if possible, of employers granting some special assistance, where circumstances may justify it, to their workmen before winter comes in, and that the reply of the federation be considered at a special meeting of this board to be held in Vorkshire on July 29." That the United Builders' Labourers' Finon be admitted to membership of the conclusion boards wherever working rule agreements exist between branches of the N.F.B.T.E. and the United Builders' Labourers' Union, subject to the approval of the parties at present affiliated to the scheine."

scheme."

3. "That the Liestrical Trades Union be admitted to membership of the conciliation board wherever working rule agreements exist between branches of the National Federation of Budding Trades Employers and the Electrical Trades Union, subject to the approval of the parties at present affiliated to the scheme."

(b) Reference from conference on proposed proposed

or the scheme,"
icrelies from conference on proposed
ional scheme for demarcation commutees,
at the scheme as amended be recommended
or the approval of the various parties, with
request that a return of the result be
nade in time for the October meeting of
but board." made

Application from the Brickhayers' Society (London Order) for re-amiliation to the concilation scheme.

(f) Any other recommendations from the executive

6. Next meeting. 7. Such other business as may be presented by the no suferit

Provisional Programme.—Tuesday, Provisional Programme.—Luesuay, July 27, 10 a m.—Meeting of the Administrative Committee, at the Masonic Hall, Great George Street, Leeds. 2.50 p.m.—Executive Council meeting same place. 8 p.m.—Reception by the President of the Yorkshire Federation to representatives of E.C. and G.M. and their ladies. Wednesday, July 28, 10 a.m.— General meeting at the Masonic Hall. 1.30 p.m.-Luncheon to members and their

The herlquarters of the gathering will be at the Queen's Hotel, City Square, close to station, where a special tariff has been arranged for members.

### ARTISTS' WAR RELIEF EXHIBITION.

-

An exhibition of pictures and drawings is being arranged by the Imperial Art League and the Royal Institute of British Architects jointly, to be held in the Galleries of the Royal Institute in Maddox Street, for the benefit of painters and architects who are suffering from the effects of the war. It will be opened on Wednesday, July 28, and will remain open for some weeks after that date. As far as the Royal Institute is concerned, it is proposed to divide the exhibits into two classes: (a) Works given to be sold for the benefit of the War Relief Fund of the Architects' Benevolent Society (these may he works by the donor or by any other artist; the works by architects sent to be sold for their own benefit. No distinction will be made in the catalogue. All architects,

therefore, who have saleable water-colour, pen-and-ink, or pencil drawings or etchings are invited to send them to be sold either in class (a) or class (b). All works should be distinctly marked (a) or (b). A small percentage will be deducted from all sales to cover expenses. As the time for making the necessary arrangements is very short, and the number of drawings for which space can be found cannot yet be ascertained, it may not be possible to hang all that are sent in; but it is proposed to remove drawings when they are sold and to hang others in place of them, in order to show and sell as many as possible. Exhibitors are asked to send to Mr. Harry Redfern, the hon, secretary, 9, Conduit Street, W., a list of the drawings they propose to submit, with the prices to be asked. Drawings illustrating buildings in Belgium or Northern France would be likely to find purchasers. All works not sold will be returned to their exhibitors.

#### ---OBITUARY.

The death is announced at the age of 70 of Mr. Lewis Sheppard, who was in practice as an architect in Worcester from 1876 until 1905, when he retired. He built and restored many churches in the Midlands, enlarged the Grammar School at Bromsgrove, and restored, after a disastrons fire, the Elizabethan mansion of Severn End, the seat of the Lech-mere family. His last work was to plan the Laslett Almshouses in the city of Worcester. How was succeeded in his practice by his elder son, Mr. George Lewis Sheppard, A.R.I.B.A., of Worcester and Folkestone, now on active service with the Royal Engineers.

Mr. Ralph Dain, retired architect, died on July 11, at his residence, Liverpool Road Burslem, within eleven days of his 86th birthday. Mr. Dain had lived in Burslem for over sixty years and had planned some im-portant public buildings in Leeds and Manchester, as well as many in the Potteries. He was one of the oldest freemasons in Stai-

Captain George Pigrum Bowie, L.R.I.B.A., 5th Batt. 1st Canadian Contingent (Vancouver) fell in action on July 7, aged 34. He was the eldest son of Mr. and Mrs. A. H. Bowie, of 9, Bernard Gardens, Wimbledon, and was in practice when the war broke out as an architect at 705, Bank of Ottawa Build-ings, Hastings Street West, Vancouver. He joined the Royal Institute of British Architects as a Licentiate in 1911.

The death is announced of Mr. Gerard Wight, of Melbourne, who for many years was a Fellow of the Royal Victorian Institute of Architects. A Victorian by birth, he was born in 1860; educated in Melbourne, and in 1836 took his degree as M.C.E., in the Melbourne, the Melbourne, and the Melbourne, bourne University. Prior to taking his degree, he was engaged in survey work on the railway line to Ballarat via Bacchus Marsh, under Mr. Cussen (now Judge Cussen), and was afterwards articled to Messrs. Smith and Johnson, achitects, of Melbourne. In 1885 he won the first prize for the design for the Merri Creek Bridge, which was afterwards built under his supervision. For some years he was in partnership with Mr. Wm. Lucas, architect, carrying on business under the name of Wight and Lucas. In 1891 he went to Europe with his late principal, Mr. Johnson (who became, subsequently, the President of the Institute). Mr. Wight's last important of the Institute). work was the Geelong Church of England Grammar School, for which he and Mr. Phillip Hudson had gained the first prize in a public competition, and the work just com-pleted was carried out under their joint supervision. For many years Mr. Wight held a seat on the Council of the Royal Victorian seat on the Council of the Royal Victorian Institute of Architects, and in 1912 he was elected President. In conjunction with Messrs Henderson and Little, he also represented the Institute upon the Faculty of Enginering at the Melbourne University. He had been unwell for the past year, and died suddenly on May 8, at his residence, Church Street, Hawthorn. He was unmarried.

The parish church of the Mumbles, Glam., is being restored at an estimated cost of £11,000.

#### LONDON COUNTY COUNCIL THE REGULATIONS FOR REINFORCED CONCRETE CONSTRUCTION.\*

(Continued from page 34.)

Splays and Brackets at Ends of Beams and Bracketed Work.

70. Where the end of a beam is splayed for the purpose of increasing the resistance moment, such splayed work shall not be calculated at a greater angle than 30 degrees from the horizontal.

#### BRACKETS.

71. In cases where bracketed work in reinforced concrete is provided in the structural design to carry loads, and to act as a cantilever, it shall be reinforced sufficiently to provide for the stresses due to such loads.

#### SLABS.—EFFECTIVE DEPTH.

+ 72. The effective depth of slabs shall be † 12. Ine enective depth of slabs shall be measured from the compressed edge of the constructional concrete to the centre of gravity of the tensile reinforcement. In the case of floor slabs the effective depth shall not be less than three inches.

#### DIAMETER OF BARS.

73. The least diameter or thickness of independent reinforcing bars in slabs shall not be less than one quarter of an inch.

#### WIRES.

74. The wires under tensile stress in connected mesh and similar reinforcement in slabs shall be at least one-tenth of an inch in diameter or thickness.

#### SPACE BETWEEN BARS.

75. There shall be a distance of at least one inch between bars in slabs except at joints and at points where the bars are in direct contact and transverse to one another.

76. All meshed reinforcement shall be of such direct and transverse to the state of th

such dimensions as will enable the coarse material in the concrete to pass easily

through the meshes of such reinforcement.
77. The maximum distance between bars or strands of the tensile reinforcement in slabs shall not be greater than 12 inches, and not more than twice the effective depth of the

#### DISTRIBUTING BARS.

78. In cases where independent reinforcing bars are provided in one direction only, distributing bars shall be provided on the top of the lower tensile bars at right angles thereto. Such distributing bars shall not be further apart than 18 inches, and shall have an aggregate cross sectional area of at least 0.08 per cent, of the effective cross sectional area of the slab; or the diameter of each of the distributing bars shall be at least 1-16th of the effective depth of the slab, and the pitch of the distributing bars shall be not greater than four times the effective depth of the slab.

79. Wiring used in slabs for the purpose of holding hars in position shall not be re garded as reinforcement.

#### RESISTANCE MOMENTS.

The resistance moment of reinforced concrete construction under transverse loads shall be determined by formulas based or. the following assumptions-

(a) All tensile stresses shall be taled

by the steel.

(b) The strain in any layer or fibre is directly proportional to the distance of that layer or fibre from the neutral axis

(c) The tensile elastic modulus of steel shall be assumed to be equal to the compressive elastic modulus of that mateal. (See regulation 53.)
(d) The elastic moduli of the concrete

remain constant within the limits of the

working stress.

(e) The stress-strain graph is a straight

(f) The anchorage, together with the grip between the concrete and steel, is sufficient to make the two materials act

NOTATION FOR BRAMS AND SLARS.

area of tensile reinforcement, in square Α

melies.

a = arm of the resistance moment, in inches.

percentage of tensile reinforcement = 100 r.

 $\begin{array}{l} p = \text{percentage of tensile reinforcement} = 100\,r, \\ Q = \text{qualifier in the equation } R = Q b d^2, \\ R = \text{resistance moment generally}, \\ R_c = \text{resistance moment of the internal stresses} \\ \text{in the learn or slab in terms of the permissible} \\ \text{compressive working stress}, \\ R_t = \text{resistance moment of the internal stresses in the beam or slab in terms of the permissible} \\ \text{tensile working stress}, \\ A \\ \end{array}$ 

r = ratio of A to b d, i.e.,  $r = \frac{A}{b d}$  and A = r b d.

s<sub>1</sub> = slab depth rat o = d<sub>t</sub>/d
 t = permissible tensile working stress, in tensile reinforcement, in pounds per square inch.
 t<sub>1</sub> = ratio of the tensile stress in the steel to the compressive stress at the extreme edge of the

concrete under flexure =  $m\left(\frac{1}{n_1}-1\right)$ 

W = total weight, or working load.

#### Beams and Slabs. BREADTH OF FLANGE.

82. For the purpose of computing the resistance moment of a tee beam, the breadth of the flange shall not be taken at more

(a) One-fourth of the effective span of the tee beam;

(b) The distance between the centres

of the ribs of the tee beams;
(c) Twelve times the thickness of the

alab:

whichever is the least.

(Also see regulations 45 and 46 as to combined stresses in beams, slabs, and other

members.) 83. In the case of - (ell) beams the breadth of the flange shall not be taken at more than tour times the thickness of the slab, provided that where the moments due to the eccentricity of the compression are adequately provided for, the width may be increased, but not beyond one-half of that allowed for T (tee) beams.

#### BREADTH OF RIB.

84. The minimum breadth of the rib of a T (tee) or r (ell) beam shall not be less than one-third the depth of the rib below

the slab. (Also see regulation 66.) 85. Rectangular beams shall be secured oo. nectanguar neams shall be secured against buckling whenever the length of the beam exceeds 20 times the least width thereof, or whenever the length of the beam exceeds 30 times the least width measured from outside to outside of the outermost longuage in the length of the outermost longuage in the length of the outermost longuage. gitudinal reinforcement.

#### SLAB REINFORCEMENT.

86. When a part of a slab is taken as forming part of a tee beam, the reinforcement in the slab transverse to the beam must cross the full breadth of the portion of the slab forming the flange of the tee beam.

#### NEUTRAL AVIS WITHIN THE SLAB.

87. In the case of slabs, rectangular beams and tee heams reinforced in tension only when the neutral axis is within the slab, i.e., tee heams in which r is less than

$$\frac{s_1^2}{2 m (1 - s_1)}$$

(a) The position of the neutral axis shall be obtained from the equation-

$$n_1 = \sqrt{(m^2 r^2 + 2 m r) - m r}$$
, or

$$n_1 = m r \left[ \sum_{i=1}^{n} \left( 1 - \frac{2}{mr_i} \right) - 1 \right] - r$$

$$n = \left[ \sum_{i=1}^{n} \left( m^i_i r - 2 n r_i \right) - m r_i \right] t$$

(b) The mean compressive stress in the concrete be taken at

(c) The arm of the resistance mement shall be obtained from the equation—

$$a=d-rac{n}{3}, ext{ or }$$
  $a=d\left(1-rac{n_1}{3}\right), ext{ or }$ 

approximately, for tee beams, a = d =

(d) The tensile resistance moment at every cross section shall be at least equal to the bending moment at that section and shall be obtained from the equation-

$$R_t = tA\left(-d - \frac{n}{3}\right)$$
, or  $R_t = tAd\left(-1 - \frac{n_1}{3}\right)$ , or  $R_t = trbd^2\left(-1 - \frac{n_1}{3}\right)$ 

$$R_tQbd^2 \text{ where } Q = tr\left(-1 - \frac{n_1}{3}\right)$$

(c) The compressive resistance moment at every cross section shall be at least equal to the bending moment at that section and shall be obtained from the equation-

$$R_c = \frac{c}{2} b n \left( d - \frac{n}{3} \right), \text{ or}$$

$$R_c = \frac{c b d^2}{2} n_1 \left( 1 - \frac{n_1}{3} \right), \text{ or}$$

$$R_c = Q b d^2 \text{ where } Q = \frac{c}{2} n_1 \left( 1 - \frac{n_2}{3} \right)$$

NEUTRAL AXIS INTERSECTING THE RIB.

88. In the case of tee beams, reinforced in tension only when the neutral axis intersects the rib, i.e., tee beams in which r is greater

$$\frac{s_1^s}{2m(1-s_1)}$$

(a) The position of the neutral axis shall be obtained from the equation-

$$n_1 = \frac{\mathbf{s}_1^2 + 2mr}{2(s_1 + mr)}$$

(b) The mean compressive stress in the concrete shall not be taken at more than

$$\left(1 - \frac{s_1}{2n_1}\right) \circ cmr(2 - s)$$

$$s_1^2 + 2mr$$

(c) The arm of the resistance inclient

where
$$a = d \left[ 1 + \frac{\pi}{3} \left( \frac{3}{2n} + \frac{2}{s_1} \right) \right]$$

$$a = d \left[ \frac{s_1^3 + 4mr_2}{6mr_1(2-s_1)} + \frac{12mr}{3mr_1} \right]$$
or approximately  $a = d = \frac{2}{3mr_1}$ 

d) The tensile resistance moment at every cross-section shall be at least equal to the bending moment at that section, and shall be obtained from the equation

$$R_{t} = t A a, \text{ or}$$

$$R_{t} = t b d^{2} \left[ \frac{s_{1}^{1} + 4 m r s_{1}^{2} - 12 m r s_{1} + 12 m r}{6 m (2 - s_{1})} \right]$$

<sup>\*</sup> Sub-headings and italic cross references do not form part of the regulations.

<sup>†</sup> NOTE.—Five inches is the least thickness for fire-resisting floors in the principal Acts.

or R Oba- where

$$Q = \begin{bmatrix} s_1^2 + 4 \otimes r s_1^2 - 12 m r s_1 + 12 m r \\ 6 m (2 - s_1) \end{bmatrix}$$

e. The compressive resistance moment at every cross-section shall be at least equal to the bending moment at that section, and shall be obtained from the equation.

Re 
$$c = \left(\frac{1 - s_1}{2 n_1}\right) i d$$
, ror  $c = d$ , i  $\left[\frac{s_1 + 4 \cdot r s_1' + 12 m r s_1 + 12 m r}{6 \left(s_1 i + 2 m r\right)}\right]$ 

or R = QA B where

$$Q = \frac{s_1 + 4 m r s_1 + 12 m r s_1 + 12 m r}{6 (s^2 + 2 m r)}$$

#### Compressive Reinforcement

59 In sections reinforced in compression due allowance shall be made for the depth

of the compressive reintorcement from the compressed edge of the beam.

9: The equations in Regulations 87 and 88 may be used in conjunction with Regulation of when the compressive reinforcement is located at or near the centroid of compressive in the control of the control o pression in the concrete.

#### Beams Supporting Other Beams.

91 In the case of a beam supported at its end by a transverse beam

a Longitudinal bars of the supported bann shall be continued across to the further side of the supporting beam, and the ends of the bars shall be hooked by The whole shear shall be provided

for by the tensile resistance of the shear or web reinforcement acting in conjunction with the compressive stresses in the

Provision shall be made to resist any torsion in the supporting beam, and to resist any negative bending moments on the supported beam, but the positive binding moments on the supported beam shall be calculated on the assumption of ends being freely supported.

92 At the ends of beams supporting transverse beams the bars shall be so arranged as to give the same margin of safety as required by Regulation 91

### Notes on Drawings or Diagrams.

95. Notes shall be added to the drawings or diagrams of all beams and pillars showing the loads which have been provided for.

#### PART IV

#### PILLARS AND OTHER STRUIS.

94 The term "strut" when used in these regulations shall be deemed to include any

compression member at any angle.

95. The term "pillar" when used in these regulations shall be deemed to include any pillar, p.er, post, column, detached support, or any other vertical compression member.

P.Hars shall be designed on the assumption that the concrete and the vertical bars are shortened in length in the same propor-

#### HATTO.

97. In calculating the strength of a pillar the maximum ratio of length to gyration rad us or the maximum ratio of length to effective diameter shall be taken.

#### Length.

3. The length shall be measured between the lateral supports, irrespective of any splayed work in excess of that allowed as part of the beam by Regulation 70.

#### EFFECTIVE DIAMETER.

94 The effective diameter shall be measured to the outside of the outermost vert al reinforcement, and shall be measured in the direction of the lateral supports which determine the length of the pillar.

#### REINFORGEMENT, BINDING

1 All pillars shall be provided with vert al and lateral reinforcement. 191 Each pillar with rect.linear laterals binding shall have at least four lines of vertical reinforcement throughout its entire hands.

engra

1.2. Each piller with curvilinear laterals by ling shall have at least six lines of errord reinforcement throughout its entire length.

103. The least diameter of rectilinear laterals (binding) shall not be less than 3-16ths of an inch.

of an inch.

104. The least diameter of curvilinear laterals (binding) shall not be less than \( \frac{1}{2} \) in.

105. (1) The pitch of the laterals (binding) shall not exceed 6-10ths of the effective diameter of a pillar of any part of its length or sixteen times the diameter of the least vertical bar.

(b) At the ends of a pillar for a length equal to one and a half times the effective diameter the pitch of the laterals (binding) shall not exceed 3-10ths of such effective diameter.

105. The lateral reinforcement (binding) shall be firmly secured at each end. 107. The volume of lateral reinforcement

(binding) shall not be less than 0.5 per cent. of the volume of the hooped core.

#### VERTICAL BARS.

108. The diameter of vertical bars shall not he less than ½ in, or greater than 2 ins. 109. The total cross-sectional area of the

vertical reinforcement in any pillar shall not be less than 1.0 per cent, of the area of the

#### JOINTS.

110 Joints in the vertical reinforcement of pillars shall only be made at or adjacent to a floor level or other point of lateral support. 111. In all joints in the vertical reinforce-

ment there shall be provided an overlap at least equal to twenty-four times the dia-

meter of the upper bar.

In cases where there may be tension in the pillar, the ends of the bars shall be formed as required by Regulation 48.

#### RECTANGULAR PILLARS.

112. In the case of rectangular pillars in which the ratio between the greater and the lesses diameter exceeds one and a half, the cross-section of the pillar shall be subdivided by cross-ties, and the number of vertical bars shall be such that the distance between the bars along the longer side of the rectangle shall not exceed the distance between the bars along the shorter side of the rectangle.

NOTATION FOR PILLARS, STRUTS, AND OTHER COM-PRESSION MEMBERS.

by the lateral reinforcement (binding) measures to the inside of the hooping.

- cross-sectional area of one bar of the binding or lateral reinforcement.

or lateral remforcement, area of the vertical reinforcement. permissible direct compressive stress. (See regulation 42.) form factor, depending upon form or type of binding or laterals. (See table in regulation 118.)

about an axis passing through the centroid of the area. increased stress permissible in the core of a pillar suitably hooped, actual length of the pillar as defined in the regulation numbered 98.

modular ratio =  $\frac{F_s}{E_c}$ . (See regulation 54.)

permissible load or pressure on pillars with both ends fixed and with a ratio of virtual length to gyration radius not exceeding 45. (See first column of figures in regulation

122.)
percentage of volume of binding or lateral reinforcement with respect to the volume of hooped core in any given length of pillar - 100 V<sub>1</sub>.

piten of the binding or lateral reinforcement spacing factor depending upon the spacing or putch of the binding or laterals. (See table

putch of the binding or laterals. (See table i) regulation 118.) volume ratio or ratio of the volume of binding or lateral reinforcement to the volume of the hooped core in any given length of pillar. (See regulations 116 and 117.) virtual length of the pillar, strut or other compression member for different conditions of the ends. (See regulations 122 and 124.)

#### FIXED ENDS.

114. A pillar or other strut shall be deemed to have fixed ends when the ends are sufficiently secured to other parts of the construcon having such rigidity as will maintain the axis at the ends in its original position and direction under all loads less than the crippling load.

#### (To be continued.) >-000-

Major General Peter Pierce L. O'Connell, provinces, has died at Bromley, Kent, aged a white-eight. He retired so far back as 1878.

### Building Intelligence.

WESTBURY PARK, BRISTOL.—The Right Rev. Dr. Forrest Browne, as Commissary for the Bishop of Bristol, consecrated on Sunday week the east end of St. Alban's Church, including the chancel and a chapel dedicated to St. Oswald. The western portion of the church, consisting of nave, north and south aisles, and transepts, was completed in 1909. The work at the east end new nearing completion consists of the choir and sanctuary, a chapel on the south side, and vestries for choir and clergy on the north. The external stonework is in Brentry limestone. Internally the chancel and chapel are lined with ashlar work. The total length of the building is 150 ft. and total length of the building is 100 It. and the width across the transepts 75 ft., the height to the apex of ceiling of chapel being 37 ft. above the chancel floor. The reredos in the chapel is of Beer stone. The total cost has been about £13,000. It is hoped in the page future to complete the tower at in the near future to complete the tower at the north-east corner, the height of which will be 86 ft. above ground level. The conwill be 86 ft. above ground level. will be so it, above ground level. The con-tractors were Messrs. Pittard and Sons, Unity Street, Bristol, and the architects Messrs. E. G. Rodway, A.R.I.B.A., and C. F. W. Dening, F.R.I.B.A., Gaunt House, Orchard Street, Bristol.

WEYMOUTH —At a meeting of the Wey-

weYMOUTH—At a meeting of the Weymonth Town Council the Advisory Committee reported that they had accepted the tender of Messrs. Partinson and Sons, Limited, of 50, Parliament Street, Westminster, for the erection of 115 houses on the Pye Hill estate for the sum of £32,722. For the erection of thirty tenements on the Granville Road estate the tender of another form are received, but on the tender of another withdrawn Messrs. Pattinson were approached, and they agreed to take over the contract for £6,445. The Pye Hill scheme was subsequently reduced from 115 to 96 houses, and the contract price brought down to £27,024. Each house or tenement is provided with a bath, and has hot and cold water supply. It is the intention of the comwater supply. It is the intention of the committee that the houses on each estate shall be dighted by electricity if arrangements can

he made.

### PROFESSIONAL AND TRADE SOCIETIES.

NOTTINGHAM AND DERBY ARCHITECTURAL SOCIETY.—On Friday, July 16, about twenty members accepted the invitation of Mr. W. V. Betts, architect to the Nottingham Co-operative Society, to invest the steal construction and function spect the steel construction and fireproof flooring at their premises now being erected in Parliament Street, Nottingham, Mr. Betts explained the plans and drawings and then conducted the party over the huilding. The front in Parliament Street will be in buff terra-cotta with large display windows. At the conclusion of the visit, the president of the society, Mr. Harry Gill, complimented Mr. Betts on his carefully thought out building, and thanked him for so fully describing the points of construction.

#### -WATER SUPPLY AND SANITARY MATTERS.

MATTERS.

BALLYMENA—In order to increase and improve the water supply to the town of Ballymena, derived from mountain springs some eight miles distant, it was recently determined to construct an additional 7-in, cast-iron main 4,800 yards in length from the storage reservoir to the filters. The pipes will be cast in three thicknesses, which will be tested after being laid to static heads of 450 ft., 600 ft. and 700 ft. respectively. Owing to the high velocity of flow in the main, pressure relief valves are provided on the up-stream side of the various sluice valves. Messrs, James Ross and Sons, of Belfast, have taken the contract at £3.097, the engineers for the extension being Messrs, Swiney and Croasdaile, MM.Inst.C.E., of Belfast. of Belfast.

The town council of Dartmouth have roved the recommendations of the Water Committee with a view to carrying out suggestions in the report of Dr. St. George Mivart, Local Government Beard inspector, with respect to the water supply.

### Gur Illustrations.

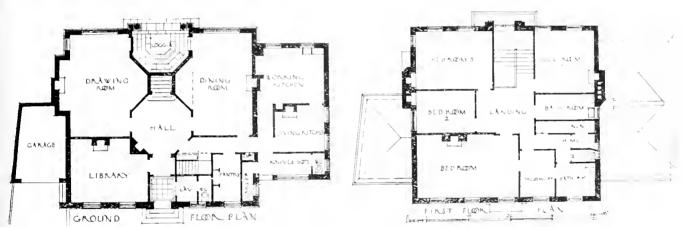

FIVE HOUSES IN FROGNAL LANE AND GREENAWAY GARDENS, HAMPSTEAD, N.W.

These houses, grouped together, are both commodious and picturesque. The sketches reproduced herewith are on view at the Royal Academy Exhibition this year. The reproduced herewith are on view at the Royal Academy Exhibition this year. The buildings occupy a well-wooded and exceptional site in a very favourite part of Hampstead. Mr. Cyril A. Farey is the architect, and the owner, Mr. George W. Hart, of "The Drive," Hampstead, has erected all of these residences. We quote as an item of general interest the prices allocated for each house. The first perspective on the top left-The first perspective on the top lefthouse hand corner of the double page inset plate re-presents "Erskine House," Greenaway Gar-dens, and herewith in the text we reproduce the ground and first-floor plans. The setting out is somewhat original, centring round an octagonal hall with a vista from the front The staircase window on the west lights the hall, and the roomy loggia is a useful feature in the lay-out. Purple and brown stock bricks are used, with red dressings and tiled roofs. The situation is on the crest of the hill, and the balanced front is of Queen Anne character. The kitchen premises are well isolated and on the other side 12 ft. The hall is a wide corridor and the of the house is a garage. The dining-room staircase is obscurred from observation from the ceiling level are gratings communicating measures 24 ft. by 18 ft. Drawing-room the main entrance.

There are seven bed with air ducts. The foul air is extracted by 15 ft. There are four bedrooms on the first mains in the ample garden for a garage ternal staircase at the southern end of the

side of the plan page is shown the lay-out of this house. The fine position is taken advantige of in the contrivance of the rooms. which are insured the maximum of sunshine The plan is disposed on broad lines, simply managed, with the entrance set well back from the road and the reception rooms get a view of the garden at the rear. Brick treatment is adopted, much being made of bold chinneys. The drawing-room is 27 ft. by 20 ft., library 18 ft. by 15 ft., and the danner room 22 ft. by 16 ft. Five bedroom occupy the first floor and two maids' rooms are in the roof. The price is £3.575, with a ground rent of £46. The last perspective to the right hand of our illustration is an effective sketch of "Greenaway Corner. The plans will be found to the top left-hand of our single page. A view of Frognal Lane is commanded from this spot midst some very bandsome old trees in an ideal position tacing south-west. The north and east winds are screened by rising and well timbered grounds beyond. The compara-tively small size of this house is distin-guished by spacious apartments, commodiously considered. The dining-room scales 23 ft. long by 15 ft., facing west, and having

accommodation has been provided. The Mail floor. The angle-set porch group is the result. The angle-set porch leads to an octagon, with the staircase facing the entry. The drawing-room, 26 ft. by 15 ft., is very sunny and projects in front. the best bedroom and bathroom en suite being placed over same. The dining-room, figures 22 ft. by 15 ft., and the library 18 ft. by 12 ft., looking towards the road. There are eight bedrooms and a garage. The price is £2,975, and a ground rent of £38, for which there is a fair-sized garden. The middle picture represents "Varley's." in middle picture represents "Varley's." in Greenaway Gardens. At the bottom left girls in various trades, and the following Madras is also taking part in the conference.

£50.

OF OCTAGON TO TOWER, DETAIL CHURCH OF ST. MARK, WHITE CHAPEL, E.

The pinnacles and upper part of the octagon surmounting the tower of this church were exceedingly crude and unsightly, and, having become dilapidated, it was decided to take down the overhanging portions and other parts which appeared dangerous, and creet thereon a structure more in character with an ecclesiastical building. We reproduce the working drawings. The encasing of the working drawings. The encasing of the tower has been carried out. The additions begin from the stone weathering which terminutes the rectangular brick buttresses at the four corners of the tower, the central brick octagon remaining as formerly. The upright posts and cusped stays at the angles of the octagon, also the lantern and traceried corona surmounted with pinnacles and cusped openings, are all in teak. Mr. John Medland and Mr. H. Hardwicke Langston were joint architects for the work. Messrs, Harris and Wardrop were the contractors.

#### L.C.C. TRADE SCHOOL LIME GROVE, HAMMERSMITH.

This building is jurify three stories high and partly one story. The latter, which forms the northern wing, has been built with the external walls of sufficient thickness to carry an extension of the same height as the

floor and three more above. The price is £3,200 is the price, and a ground rental of building affords an alternative means of escape in case of fire. The building has been designed by and carried out under the supervision of the superintending architect to the London County Council, Mr. W. E. Riley, F.R.I.B.A., R.B.A., M.I.C.E., the coltractors being Messis, W. Lawrence and S. g. The design and plans constitute, we think, one of the most successful examples of the schools erected by the London County Couned, and certainly the most economical advantage of the system of construction adopted has been obtained without any sacrifice of legitimate architectural effect.

### Currente Calamo.

Filer. Car rof to Australian on after an interval of furteen years thist attempt to bring the architec Six as a gether in 1901. There are s its an Institute f Architects. The Stocks vary greatly in size, as do the Institos New Seith Wales and Victoria rank listing a state two larger Institutes, whilst listen a is the smallest. If, therefore there was to be anything like equality representation upon the Federal " became necessary that each State or i made an equal number of representaes, and equal voting powers. The idea of the firmation of the Council is to be ter ; in the conference of the Presidents f tiv State Institutes, held in Melbourne At the invitation of the Institute f Ar to is of NSW, a further confera was arranged, to meet in Sydney in Note to Just. To this Sydney conference, . . . Institute sent two representatives, and the pair light of federation, rather than unimat it, has agreed upon, as a working basis. The general resolutions of the conference, as ag subrequently been laid before the arr is listitutes, the policy which had been , lopted was affirmed by the Institutes. further onference was held in Melbourne last April, and the following resolution was natumentsly adopted, and up in which the un il vas constituted i- "Whereas it was whiled at a conference of representatives the State Institutes, held in Sydney in November, 1914; That it was desirable to torm a Federal Council to represent the State Institutes of the Commonwealth,' and this being confirmed by the respective Institutes, the said Federal Council is hereby constituted."

Having teen only constituted, the first nescess was the election of the president, and the secretary and treasurer. Mr. A. W. Anderson, the President of the Institute of Ar hate is of New South Wales, was unani m usly elected the first President, and Mr. W. Newman (N.S.W.), the Secretary and Treasurer. It is obvious that both these afteers must belong to the same State, otherass the air instrative work, when the Connell is not in session, would be very difficult. The members of the Council are to be appointed by the Cancils of their respective Institutes, the term of office being thelp months. The Councils of the States the han the State in which the Federal Con. The setting are empowered to appoint a ostal test a take the places of any of their representatives who may be unable to attend the Foliera, Council. In order to provide Land a minority of the States transacting or somes of the Corn al, the quorum shall they to formed when five or more States are represents but each State shall, at all i. . meetings, be entitled to two votes to provide the necessary funds for the work of the Council, the operated to levy upon the per of membership of each State ( mui Capita T Vitoria ras just paid the due fig. his per member as its quata for the ct to year. The objects for which the believe Countill's symbolished are: I represent the profession in the Federal

lab it uniformity in Australian

The operation and powers of the Council empower it to deal with.—

1 Martier of Foldral interest.

Any question which may be referred to the rederal Council by any institute. The ruling of the Council shall be find, and binding on the State 153 ture.

The annual meeting shall be held during April or May, in such State as the Council may do ,de Au litted balance-sheets, and an St. s in the Commonwealth, and cach annual report shall also be presented. We in terstand that Adelaide is chosen for the i eting in 1916.

> After framing the constitution under which the Federal Commonl will work, the Council settled down to the consideration of conditrans of a supertions, and issued a lengthy sie, showing the guiding principles to be embodied in future competitions. The aim is that there shall be clear instructions to impetitors, the minimum of work in the preparation of the designs, fair and reason able prizes, which shall not be merged into the commission of the successful competitor. gether with obtaining professional advice during the adjudication. Another subject healt with by the Conneil was the scale of professional charges. There are still those al stell Australians that 5 per cent, is the tendard fee of the British architect. But. is is remarked, if anyone will refer to the Kalendar" of the R.I.B.A., he will find along list of items which are not included n the 5 per cent. charge; and it is contended hat the British architect, with his 5 per ent., comes off much letter than his Ausalian brother with his 6 per cent. Federal Council has, therefore, carefully least with the problems of remuneration, and, whilst laying down a model scale, has left some of the final determinations to the various State Institutes. Other matters were balt with in a business-like fashion, which augurs well for the future of the Federation, to which we very heartily wish success in every respect.

Since the war broke out many fresh business contracts of service have been entered into for the purpose of arranging to "carry on" during the war, usually with reduced salaries The legal position of the parties to these old and new agreements is sometimes not easily determined. The recent case of Raggow v. Scougall and Co., heard on July 16, is, therefore, of some interest to the building and other trades, in which such fresh arrangements have been made for the duration of the war. In this instance the plaintiff, by a written agreement of August, 1915, entered into the service of the defendants for two years at a certain salary, with a proviso that, if the business should be discontinued during that period, When the agreement should come to an end. the war began defendants thought of shutting down their business. Then the plaintiff made a fresh agreement with the defendants, as did other employees of the firm, by which he accepted a lower salary for the duration of the war, with a proviso that when it ended, the old agreement should revive and he effective. He went on at the reduced salary until last February, when he claimed payment at the old rate, and, this being refused, he sued for the excess. the City of London Court he got a judgment in his favour on the technical ground that there had been no consideration for reducing his salary. Now, on appeal, the High Court has emphatically reversed that ruling. The judges there held that the new agreement was quite clear and binding, as it provided the set of metally the views of the per- was quite clear and binding, as it provided to the anomal metalty and for carrying on at a lower salary while the per- defining the set of the set

old agreement and the old terms when the war was over. So a perfectly fair and just arrangement was supported and backed by the law, and the plaintiff will have to pay all the costs of this ingenious attempt to do what the judge called a dishonest thing.

One thing is certain about the State scheme for insurance against damage done by enemy aircraft and by bombardment from the sea, and that is unless it is seriously modified it will fail. The bombardment phase of it does not apply to ninety nine hundredths of the country, because it includes only damage done from the sea; but the fact that the anti-air damage premium for private honses is to be as high as is charged on the ordinary fire insurance policy is sufficient condemnation to the ordinary citizen. Ordinary fire danger is always with us, the Zeppelin peril it the worst is relatively remote, and to charge the like premium against the risk of each is to feed the fire insurance companies and court failure. There are other limitations also which render the scheme futile in our opinion; and, speaking generally, it seems another characteristic attempt to solve the problem of giving nothing for something so ingeniously contrived in con nection with the National Insurance Act.

"She may go to Halifax and not come ran the tag of an old musicback again, hall song in our gilded youth, though why the advisory permission was granted remained one of the many mysteries we have never solved. Probably because the wellwisher knew the lady would never leave Halifax if once she got there. That, anyhow, is likely to be the resolve of all readers of the excellent and informatively illustrated handbook, "Halifax: A Commercial and Industrial Centre," just issued by Messrs. Sells. Ltd., at the Sign of the Sundial, 166-169 Fleet Street, E.C., at 2s. 6d., post free 2s. 10d. Its perusal will make it as clear as crystal that this ancient and thriving town. with its varied prosperous activities in trade and commerce, offers one of the most advantageous locations in the three kingdoms for new works, or extensions of old ones, and any architect, builder, or land agent might do far worse in these none-too-busy times than run down for a day or two and explore the district in the interest of clients watching for opportunities. The interest of the volume is enhanced by the illustrations of some of its beauty spots, and by those of some excellent residences which its residents and others have had the good taste to build.

Mr. J. Robinson, sanitary inspector at Wathas had his salary increased from £220 to £250 per annum.

The salary of Mr. J. H. Castle, town surveyor of Goobs, has been increased by the Urban Dis-trict Council by £50 per annum.

Licut, Ralph G. Dinwiddy, R.N., son of Mr. Thomas Dinwiddy, F.R.I.B.A., F.S.I., has been promoted to rank of commander in his Majesty's Fleet.

Mr. Doyle, town surveyor, has resigned his position under the Athlone Urban District Council, having been appointed county survevor of Longford.

By unanimous votes, both in the Council and in the general meeting of members at Melhourne, the name of Franz Jaffe has been removed from the rank of Hon. Fellow upon the roll of membership of the Royal Victoria Institute of Architects, as that of an enemy alien.

The City Engineer of Worcester has submitted to the Corporation a report on the best means of washing the gravel on the surface of the primary filters, and for alterations and works at the sewage farm, at an estimated cost of £2.009. He estimates the annual cost of washing the gravel at £1,000. The matter is still under consideration.

### Our Office Table.

A collection of landscapes and architectural studies by the Hon. John Collier is now to be seen in the Leicester Galleries, Leicester Square. These water-colours are very diverse, both in subject and character, garnered from different places, and including Thebes and other parts of Egypt. Judging from the date of one of them these pictures appear to have been made during a tour in 1885. Every feature is drawn with keen technical recognition and unfailing appreciation as exemplified by the artist in the interior view of a characteristic colonnade from Denderah (5), also the Temple of Edfou (23), and by two sketches of the Great Temple of Philae (9 and 27). Equally well rendered and of another type architecturally, but not less elaborate in ornamentation, appears the Mosque of Cordova and the Courtyard of Lions in the Alhambra (20 and More freedom of handling, as might 22). naturally be expected, is evidenced by Mr. Collier's charming subject of the outer of Carcassonne, the capital of the Depart-ment of Aude, in France, showing the conical roofed circular corner tower on the ramparts (14) with the fertile country beyond, wide of Toulouse. Another sketch of the same turret occurs in the interior of the walls (21). At home in the west the artist has given us water-colours of Salcombe and Saundersfoot harbours, as well as Woolacombe Sands and a garden in Devon. All these are marked by contrast, of course, to the orange trees in the garden of Lindaraja or in the spring scene at the Villa Serbellioni, from whence we get also an autumn piece (25), and "A Winter Study at Murren" (19), which hangs near the last. Probably most of these exhibits represent work done during the leisure of bygone years.

The sixth exhibition promoted members of the London Salon of Photo-graphy will be held at the Galleries of the Royal Society of Painters in Water-Colours, 5a, Pall Mall East, S.W., from Saturday, September 18, to Saturday, October 16. The exhibition will remain open daily (Sundays excepted) from 10 a.m. to 6 p.m. The private view will be held on Friday, September 17, from 3 to 6 p.m. An innovation has been introduced this season by the committee. All pictures may be submitted to the Salon, both from Great Britain and from abroad, unframed and, if necessary, unmounted. The Salon committee will see that the prints are suitably mounted if accepted, and in all cases will be shown under glass. Exhibits can thus be sent safely and cheaply in packages by parcels post, and the result ought to be that the committee will receive the best available work of the year from which to select a display.

At the meeting of the London County Council yesterday (Tuesday) it was reported that reductions in the maintenance votes for the current financial year amounting to £156,747 had been made by the various spending committees of the Council, and all the committees were instructed to consider and report on possible further reductions. The Council on March 7, 1911, sanctioned expenditure not exceeding £20,000 for the acquisition from the South-Eastern Railway Company of a portion of Nos. 9 and 10, Strand, required for widening the road to a wirth of about 80 ft. The price to be paid was recently the subject of an appeal by the Council to the Court of Appeal, and the settlement is being effected at £18,550, in accordance with the findings of the Court. Housing Committee reported that a group of twenty-six cottages on the Norbury estate, providing accommodation for 166 persons, are nearly completed. Inclusive rents for the cottages have been fixed as follows: Four rooms, bathroom, and scullery, 10s. 6d. a week; four rooms and scullery, with bath, 9s. 6d. a week; three rooms and scullery, with bath, 8s. to 9s. a week; three rooms and scullery, 8s. 6d. a week.

authorities to Freemasons associated with the authorities to Freemasons associated with the West Lancashire Provincial Library to visit the Lathom Memorial Chapter House. The cently roofed. The architect (Mr. G.Ibert Scott) considerately left to the chief sculptor. who happens to be a member of the craft, the detailed decoration of the Chapter House which aheady presents a large proportion of the Masonic features to be embodied. Several of the leading Biblical characters associated with the building of King Solomon's Temple are recognisable among the statuettes visible through the scaffolding, while the working and emblematic tools used by misons, operative or free, have been florally entwined. The common gavel is encircled by the thistle. this being part of an elaborate scheme embracing the lily and the rose in a novel form of architectural treatment.

The Bribery and Secret Commissions Prevention League, Incorporated, now possesses records of exactly 102 convictions under the Prevention of Corruption Act, which came into force on January 1, 1907. The list may not include all the cases, as no official record is kept for the United Kingdom. In thirteen instances terms of imprisonment have been Prevention of imposed. The maximum fine has been imposed eleven times, and the fines have exposed eigen times, and the mes have exceeded, in the aggregate, £2,000, while the costs imposed by the Court, when stated, have averaged about £10. The reports of the 102 cases show twenty-seven cases conneoted with canteens. Army or Navy our chases, etc. thirteen attempts to bribe the police, ten instances of bribery concerned with trade secrets, seven with weighing and packing; and it has been proved that bribes have been offered to, among others, solicitors (two), a doctor, a borough surveyor, a clerk (two), a doctor, a borough surveyor, a clerk to a board of guardians, a county council inspector, a town council officer, an in-surance assessor, a mercantile marine officer, a motor expert, the hon, secre-tary of a miniature rifle range, pro-fessional footballers (four), and to one woman cook. The persons convicted include twelve manufacturers (automatic machines, blouses, boots, bottles, chemicals, guns, textiles, typowriter supplies), nine merchants (coal, hay and straw, metal, timber), eight shopkeepers (butchers, dairymen, fishmongers and fruiterers, grocers), six commercial travellers. five clerks, four persons driving motors (at tempting to bribe the police), and three motor agents and repairers, four persons connected with the cinema film industry (one of them the owner of a picture theatre, six betting men, eight labourers, carmen, etc., and a solicitor (convicted on two charges), an actor, a boarding-house manager, a builder, an emigration agent, a farmer, a hotel valuer, a metal broker, a restaurant keeper, etc. There have been three appeals against convictions, each of which was unsuccessful. In the period under review there have been, of course, many other convictions for bribery under the Public Bodies Corrupt Practices Act, the Liceusing Acts, the Customs Laws, Act, the Liceusing Acts, the Customs Dance, the Merchant Shipping Act, and the Common

At the meeting of the Canterbury House of Laymen, held last week, Lord Parmoor presiding, the vice-chairman, Chancellor P. Vernon Smith, submitted the report of the Committee on Dilapidations, containing a number of recommendations. As amended, Committee on Dilapidations, containing a number of recommendations. As amended, the first was: "That the House is not prepared to approve of the provisions of the Draft Bill for amending the Ecclesiastical Dilapidations Acts, 1871 and 1872 and for other purposes) which substitute for the district program as central anthority." existing system a central author tv Approval was given to a provision for the compulsors was given to a provision for the compulsors survey of the buildings of a bene fice every five years, and a number of other provisions which it was felt might be en grafted upon the existing Acts, and it was resolved that in every diocese the Diocesan Board of Finance should make grants in alof dilapidations or for paying the surveyor fees or salaries, or the other costs of all ministering the Acts. It was further to solved that diocesan surveyors should be paid

entire sewer to clean it.

The Great Central Raftway Company his made arrangements to facilitate is exceptionally its employees be the row 4. Per Cert William Loan, and thus enable the smallest investor to acquire this excellent Generalized the subscriptions reaching 25 or notices of 25, the sum can be converted into War Loan Stock, and the necessary stock certificate will then be issued. This effort on the part of this leading railway company to encourage thrift, and directly benefit the country, is very commendable, especially when is borne in mind the number of trained men who have already been released for active service.

COMPETITIONS.

DUNDALK. IRELAND. - The new original in treatment and at the same time Louin country offices. Dandark, competition, a libere to the principles laid down by Owen testra ted to are needs in practice in Fredand. Jones." restricted to are neets in practice in Freland as over settlen and we give the assessor's report. The watness of the competition. Design No. 14 are: Messrs, O'Calaghan at i Woba, FFR.LA.L. 31, South Frederick Street, Dablan. The design placed second settle work of Messis, Batchelor, A.R.H.A., and H. ks., FFR.LA.L. 86. Merrion Space, Dablan and the design placed third, No. 15, is that it Mr. Thomas J. Cullen. 25. Sit. L. Street. Dablan. The award of the **>** in: k Street, Dablin. The award of assess r has been approved and a cepted by the rimittee. The plans are now being exhibited in the Com il Chamber, Court II asc. Dundalk. The cost was limited to 20. O, exclusive of fittings, furniture and equipment. The style of the building had armonse with the Court House, Dundalk a building with Doric portico of considerable ment, which adjoins the site, and Irish materials were to be specified. The selected urchitects have to prepare a perspective of their design forthwith showing the entire scheme. The following is the award of the assessor, Professor W. A. Scott, FRIAL.

45, Mountjoy Square, Dublin, July 8, 1915.

LOUTH COUNTY OFFICES.

Dear Set. I beg to report that I have examined the numeteen designs submitted in competition for the new county offices for County Louth, to be creeted at Dundadk, and place the designs as follows:

(1) The design No. 14.
(2) The design No. 15.
(3) The design No. 15.
(4) The design No. 15.
(5) The design No. 15.
(6) The design No. 15.
(7) The design No. 15.
(8) The design I place first is straightforward and a good solution of the problem, while the architectural treatment is the best of the designs submitted, having regard to the conditions of matelying the old building and as to the cost.

The light major the largest room in the courthouse is not unduly curtailed. A reconsideration of the arrangement of the standard is desirable, and this competition should submit a modified plan according to

competitor should submit a modified plan according.

The design No. 12 is a good second. I commend its arrangement of the conneil chamber, committeeroom and lobbe, and also the staticase. The ground 
plan would have been improved by a direct entrance 
to the staticase hall.

The congested area at the public convenence is a 
defect, but the width and lighting of the courtyard 
is 2000.

The architectural treatment is not of the same 
quality as the planning.

The design No. 15, which I place third, presents a 
good islangiant the width and lighting of the court.

The architectural treatment is not of the same quadity as the planning.

The design No. Li, which I place third, presents a good plan don't be width and lighting of the court variation not so good as in the prenated designs. The offices near the entrance are not well preportioned. The committee rooms are rather remote from the council chamber, if these apartments are to be used as sorts.

The architectural effect of this design would be better than that of the second premated design, building. I thus a typical chamber, a well with the existing Library to the council of the second premated design, building.

I thus a typical to direct attention a contained of the chamber to the council of the council of

idding. I thing to putit to disport attention to the high landed to which to try der number of the designs

fandated to which the Lee of the reached.

The scaled envelops which accompanied the committee curve designs 1 shall submet to your committee on they consider this my award. Yours faithful W. A. Scott.

#### WAGES MOVEMENTS.

Tees side Plumbers' Wages.—The operative plumbers recently gave their employers notice for an advance in wages of one penny per hear - 2.d. to 11d. According to agreements the question came before the Conciliation Board, who were unable to come to a decision. At the manimous request of the Board, Mr. S. E. Bargess, borough surveyor of Middlesbrough, andertook to act as arbitrator. He has now given his decision to the effect that the wates remain unchanged. Mr. Burgess pointed out that the request was for an advance of wages, not a war bonus, and he had considered the question on those lines. The decision affects Middlesbrough, Stockton, and the Hartlepools.

REPLIES.

[13142.]—CONCRETE BRIDGE.—I trust the following will be of service to "Bombard":—Bending moment about the middle and at the supports of a beam or slab with both ends fixed and a single concentrated load at the centre:

$$B = \frac{W l}{6}$$

Bending moment on a beam or slab with one end fixed and one end freely supported, and the load uniformly distributed

At the fixed end 
$$B_{c} = \frac{W l}{8}$$
About the middle  $B_{c} = \frac{W l}{10}$ 

Bending moment on a beam or slab with both ends fixed, and the load uniformly distributed:

At the ends 
$$B_c=rac{W\ l}{12}$$
 About the middle  $B_c=rac{W\ l}{12}$ 

Bending moment on a continuous beam or slab of three or more spaus, and the loads uniformly distributed. End spans, about the middle and at the inner support:

$$B = \frac{W l}{10}$$

Intermediate spans, about the m dille, and at supports.

$$B = \frac{W}{12}$$

Bending moment on a continuous beam or slab of two spans, and the load uniformly distributed:

About the middle of spans 
$$B_{t} = \frac{W t}{10}$$
At the central support  $B_{t} = \frac{W t}{10}$ 

Reaction on adjoining support from intermediate spans in continuous construction:

#### LEGAL INTELLIGENCE.

SEWERAGE CONTRACT APPEAL. the King's Bench Division on Wednesday. Justices Darling and Coloridge heard an appeal by the Tipton Urban Descrict Council in connection with the Tipton sewerage case from touncesson with the Tipton sewersige case from a decision of the Official Referee in favour of Mr. Arthur John Plowdrill, who had sued them as assigned of a contract between the conneil and Misses. Thompson and Farley, and had a final form of the detail and final form. council and Mosses. Thempson and Farley, and had obtained judgment for £451 and costs. They claimed to recover the money in respect of a balance of the contract price alleged to have been wrongfully deducted on account of charges paid by the District Council to the Birmingham Canal Company for drawing off the water while sewer pipes were land across the canal. The Official Referee came to the conclusion, after hearing evidence and arguments for six days, that the plaintoff was entitled to £206 on his original claim and £225 on an amended claim. Mr. Distornal, K.C. on holial of the Tipton Urban District Council, said the case arose out of a contract made on needs of the Tipton Croan District Council, said the case arose out of a contract made on September 24, 1912, between Messrs. Thomp on September 24, 1912, between Messrs. Thompson and Farley and the council, and Mr Plowdrill was the assignee of the obligations and benefits under that contract, which was for the construction of sewers in the council's district. The sewers had to cross the Birmingham Canal in three places, and, for this purpose, it was necessary that the canal should be emptied. The Birmingham Canal Company charged the district conneil for the time the canal was empty. The contract and bills of quantities stipulated that the contractor pany charged the district council for the time the canal was empty. The contract and bills of quantities stipulated that the contractor should provide certain sums for these canal crossings and he responsible for them. The district had paid £700 in respect of these canal crossings, and Mr Plowdrill had paid nothing. In the settlement of accounts between the parties the engineer to the council deducted a portion of this £700 from Mr. Plowdrill's bill and certified for the balance which he was and certified for the balance which he was paid. Mr. Plowdrill then sued for the amount R = .6 W

The bending moments upon square or rectangular slabs with load uniformly distributed and supported on paid it he sued by an amendment for the

Diagram. For calculating minferoements in slabs. Based on limiting stresses of 600 ths. per so, in in the Concrete, and 16 ooo the per sq. in in the steel. The full lines are for slabs of effective depth stated LP, 12"= 12 ins. depth from top of Concrete to centre of steel. The overall depth must be increased to allow for at least & cover of concrete to the steel, so that the total thickness of a 12" in slab would be about 13 ins. The dotted lines show sizes of round rods the spacing of which is given on the night hand rertical seals.

four edges, and reinforced in two directions at right angles to each other, should be determined as for slabs reinforced in one direction only, with the load reduced, however, by multiplying it by the following factors: For the shorter span—i.e., breadtb—

$$Fb = \frac{1}{I + \left(\frac{b}{l}\right)^{\frac{1}{2}}}$$

For the longer span-i.e., length-

$$Fl = \frac{1}{1 + \left(\frac{l}{-1}\right)^4}$$

Where b = breadth or shorter dimension and l = length or longer dimension.—James Bromley, Rothwell Estate Office, Miller Arcade, Preston, Lanes.

sams provided in the contract which he had agreed to pay to the canal company. Although he had not paid a penny, the Referee not only awarded the amount deducted, but the amount provided in the contract. Mr. A. A. Hudson, K.C., in support of the Referee's finding, argued that the urban district council had incurred liabilities with which Mr. Plowdrill had nothing whatever to do, and after had incurred liabilities with which Mr. Plow-drill had nothing whatever to do, and after the canal was crossed the district council entered into one ious agreements with the canal empany. Eventually their Lordships allowed the appeal as to £225, but affirmed the de-cision of the Official Referee in regard to the balance of £205. Judgment was entered accordingly, with no order as to \$55.

Unlike individual academies, tional establishments, and particularly schools of architecture specially concerned with men students, this annual exhibition of works submitted from all parts of the British Isles, and also from New Zealand. has not been materially affected-at any rate as regards the number of competitive efforts, by the unsettled state of affairs during the past twelve months in consequence of the war. No fewer than 1991 exhibits were open to public inspection at the Victoria and Albert Museum on Friday last. This result is not perhaps un-expected, seeing that "business as usual" has been carried forward in a quiet way in many a remote centre of artteaching as well as in the industrial towns which have been more or less unusually busy on profitable work incidental to military affairs. Apart from these considerations, it must be remembered that a very large proportion of these competitors are women; and even in normal times of late years the successes recorded in these exhibitions at South Kensington have been carried off by the gentler sex, who not infrequently have far surpassed the men in the excellence of skill displayed by prizewinners.\* This, no doubt, is so on the present occasion, especially in the jewelry section, in which men are generally conspicuous by their absence, while in the Department of Architecture 1914-15, contributed to only by men, the number of exhibits and the standard of work have certainly never reached a lower level. For many years we have had no alternative but to point out again and again the entirely unsatisfactory state of things still

\*The following abstract gives an approximate idea of the proportion of the sexes among the medal and other approved works now on exhibition. London is represented by a total of \$75 exhibits, of which 141 are hy women, who secured all 3 of the gold medals awarded in London, S out of 14 silver medals, and 27 out of 41 bronze medals. Leicester sends 95 works, 27 being by women who obtained 4 out of 5 silver medals and 2 out of 5 bronze medals. Birmingham shows 65 exhibits, 25 being by women, the male students taking a gold medal, a silver medal, and a bronze medal. Manchester's total representation numbers \$2, of which women show 26 works, men taking 1 gold medal, 1 silver medal, and 2 hronze medals. Leeds has 41 exhibits, with 15 to the women's credit, but out of the 6 medals taken one only goes to a lady. Kingston and Hull show 33, with a proportion out of this of 24 women, who also secured all the medals given to this school. Nottingham sends successfully 41 works, with a proportion of 11 to women; they take only two medals out of 21, two being gold medals. Bradford shows 30 exhibits, all by men except three, and these are among the "commended." Newsatleon-Tyne shows a modest 12, a third being by women. These figures, taking them for what they are worth, are fairly representative, and out of the 74 quoted women scored 276. The total number of works submitted was 11,129 hy 267 schools, classes, etc. The total awards are 7 gold medals, 58 silver medals. 163 bronze medals, 334 book prizes, and 1,428 "commended." Of the 7 gold medals women have won three.

prevailing in connection with the "mistress art" throughout the land in the schools of art conducted under the ægis of the Board of Education. We have over and over again said very much what the examiners in Architecture are now plainly stating in their report this year. The paucity of the display in this section of the National Competitions War-time Exhibition is, however, not solely due to the absence of the best of the students on military service, though this is the prime reason set out in the judges' remarks. At any rate, it is only indirectly true; by which we mean that the R.I.B.A. having last autumn suspended their prize competitions, the usual migration of unsuccess ful designs from Conduit Street to South Kensington has for once been made impossible; and to that extent we are glad. because the absence of such works, which never ought to have been admitted, demonstrates clearly the futility of the methods which at last are now correctly recognised by the assessors in their pertinent observations upon the drawings as submitted in competition for the national medals and prizes this year.

Mr. E. Guy Dawber (the hon, secretary of the Institute), for the first time we believe, has joined the Board of Examiners his confreres being Mr. Reginald Blomfield, R.A., past P.R.I.B.A., and Profes sor E. S. Prior, A.R.A. It will be patent to everyone outside the water-tight compartments of the Board of Education that architectural authorities, such as these capable experts so well representative of the profession, are convinced that all this amateurish child's play of this department dealing with the most ancient and supreme of the Fine Arts ought to be reconsidered. This we have repeatedly insisted on without avail, and it remains to be seen whether even now any improvements will be attempted by the Government. The Report says, what every one can see for themselves, that this class in 1915 is distinctly below the average level of works shown in recent years, and we have already stated one very good reason for this decline. The examiners point out that the fantastic and meaningless use of colour still obtains, accompanied by "such ignorance of architectural design as to imply the absence of any intelligent control on the part of the master. For example, designs for a market hall: in one of these adequate lighting for market purposes under the hall has not been provided. In another design for the same subject solid piers of masonry are shown on the ground floor, carrying nothing except a 14-in. wall, which is supposed to support a roof of 42 ft. span and a heavy clock turret, without any tier or abut-

ments. Drawings are submitted showing an entire absence of any architectural sense or knowledge of construction; and it is no solution of the problem of design to leave large blank sections, omitting all details of construction, on the hypothesis that reinforced concrete will do all that is necessary. The examiners wish to point out ' (and this is the crux of the whole position) "that it is mischievous for students to attempt architectural design unless there is adequate provision for architectural teaching by trained and competent men, and that in their opinion, in the absence of such provision architecture should be definitely omitted from the school curriculum. Ignorant or inade-quate instruction in architecture does more harm than good, and the results are too often seen in the works of the speculative builder." And further, as to measured drawings, "the examiners regret to note that in certain cases drawings executed under the master's supervision are far from satisfactory."

That is conclusive enough, and needs no further comment unless it be to add that men who are engaged, as art masters must be, in teaching all sorts of art and craft work are naturally incapable of concentrating enough attention on the task of teaching architecture, of which at best they have but a slight acquaintance, particularly if their personal prelibections run, as they usually do, in what they conceive to be the more important branches of draughts manship, painting, or modelling, to say nothing of applied design. Of decoration they display no knowledge, and so "give splendour to obscurity and distinction to undiscovered merit," as Burke ironically said a hundred years ago about another organisation. We have enough of so-called "chats" about architecture, and need to get to the root of the business, which depends upon sound construction, and is yet the highest of the arts. The designs exhibited this year in the Royal College of Art show the best of the type of thing produced by specialising students who are the very individuals destined in a few years to be sent forth to teach architec ture to students throughout the length and breadth of the land, thus wasting money paid in fees, and, more precious still, the time of youth which can never b. redeemed, and, at the same time, landing the student in what must prove a cul-desac.

The duties of the judges this year were strangely out of all proportion to their personal status, and the highest award a £15,000 museum, of which Mr. Harold Beard, of Leeds, is the author. The tin for its judiciousness and refined Greek character, which in Leeds would the Camden School of Art, Islington, son lok as black as Broderick's famous that with a This museum has four galleries and a portional in stone and look.

The formula is strong this year, and the Camden School of Art, Islington, is once more singled out for a gold medal. It is given to Miss borothy Ballantine for a chosonné and portional in the camber of the course of the ang in re than the money proposed would gold and silver necklace with coloured privide fir. A book prize is accorded to Mr. Cuthbert B. Stewart, of Newcastle-on-Type, for a block of almshouses set out in a quadrangle with a dining hall. This subject is very like one of the advanced sindents' schemes on view this year at the R val College of Art; so much so, in fact, that both appear to be the result of the same instructions. But this may be a mere coincidence. Mr. Stewart puts the almspe ples' bedrooms on the first floor, and the colonnaded cloister or verandah in front must darken the ground-floor roms, add much to the cost, and prove very draughty for the aged to sit out under. There is much waste of space in the rooting, which is covered with red tiles, but would seem to be pretty in execution. Mr. Percy Whitehead, from the same school, gets a similar prize for an elementary school and a fireplace. "Com-mendation" is the limit of recognition dewoted to Mr. Stanley E. Rodger, of the Armstrong College, Newcastle-on-Tyne, for a garden pavilion, shown by a taking yellowish pastel view sketch of a loggia and a lid-looking side summer-houses, or tool places, which appear to make up a pleasant scheme backed by trees. "measured drawings" are not much more exhibit atting than these architectural designs, but Mr. William N. Spence, of Dublin, shows a workmanlike set of Trinity College Chapel in that city, giving plans and details of a type of building for which Dublin is so famous, and which is now much in fashion. We need not allude to the ther few things in this immediate alcove devited to architecture; indeed, that art is so insufficiently represented that to fill the wall and two side screens other things follow on. Before proceeding to the gold and silver medal works, we made a note or two at the far end of the big north gall-ry on some decorative in-terior work by Mr. Arthur E. Harvey, of Hackney Institute, for the interior of a ballroom in a country house. It proposed a Late Classic panelling for the mural treatment with pedimented over-doors and panel emblazened with heraldry over the fireplace, of which features details are given. The capital ceiling in plastering has a cove with foliations in the corners beyond the mitres, and in the centre of its All very good of its kind on old lengths. This thoroughness is worth much more than a book prize, even if the fire-place is rather flat in design. At least it is reserved and in scale. Mr. Percy B is reserved and in scale. Mr. Percy B Illindson, of the Storey Institute, Lan-caster, only scores a book prize for his Accoration drawings of a dining-room and formiture, including a fairly successful sideboard, a carving chair and a smaller me on sits. There is also a view of the room in watercolour and sets of plans showing the lay-out. We hardly think it is wise not to recognise such a standard of work, giving only a book—not that we recked the lesign to highly still, there is a limit.

There are this year seven gold modals, 58 silver modals, 163 bronze modals, 334 book prizes and 1,428 commended designs in the Exhibition. The modelled figure from the nule of a man, somewhat reroom the name of a main, somewhat he calling the Quot Thrower, admirably wins a fold medal. It is by Mr. George W. Bedford, of Leeds, who has imparted our a fine swing generally and good jose

enamel pendant, harmonious in scale and tone throughout, though, perhaps, lacking incident in its design, and undistin-tinguished by much special inventive-ness of idea. The judges in this section are Messrs. Nelson Dawson. R.E., Alexander Fisher, R.B.S., and George B. Heming, the same examiners who almost invariably have decided these awards for some years, and nearly the same words were repeated in report this time as those printed in 1912, when a gold medal was given to Miss Dorothy Munro, of the Camden School, for a Scotch-like enamelled cloak School, for a Scotch-like enamelied cloak clasp. Last year four silver medals went to the same Islington school, besides a bronze one for jewelry. On the present occasion Mr. Wilfrid L. Vinson of this school takes the jewelry silver medal (29) for a pendant and chain in gold and silver set with stones. We think the pendant is rather bizarre in effect and overdone by its attachments. A brenze medal is won by Miss Cecilia Adams, of Belford Park, from the Central School of Arts and Crafts, Camberwell, for two necklaces; one in gold having a pendant with a Medieval castle set about with jewels and foliage beautifully executed. and with an idea of its own, and the other in enamelled links of a delicate chain and carrying a moonstone drop pendant wrought about with ideal settings. In the same showcase, and as a centre to the other two exhibits in the place of honour, is an exquisitely rich necklace in zold and enamel, blue and white, interspaced with ball chains in enamel, bearing an engraved swivel pendant illustrative of personalities of the contemporary "Dance" set in a jewelled and foliated frame by a jewelled a jewelled and fonated frame by the same lady (374), and for this work a book prize was thought appropriate! Miss Dorothy Hollam, also from the Peckham Road School, has a bronze medal for an enamelled plaque not particularly interesting. When competitors send in a group or set of similar works of art with a view to recognition on their merits in the same class, it seems unreasonable to divide them up so as to give two minor prizes in lieu of one substantial reward, especially when the rule "b" precludes the successful student from receiving more than one of the same It looks like giving with one class prizes. hand and taking back with the other, particularly when the asterisk is added signifying that the competitor is not qualified, no matter what his or her skill may be, to receive any prize as recommended by the examiners. There is no quibble for which some plausible excuse may not be found, and this, perhaps, is one of such.

A gold medal is well won by Mr. G. Rayner Hoff, of Nottingham, for modelled design for a plaster panel over a theatre or opera-house proscenium. The work is rhythmic in the progression of the low-relief figures, with an exquisite reserve and power of grouping, flatly handled, with horses at the tail-end of the procession. Miss Gwen White, of Mary-lebone. Polytechnic, for a stained wood Inssing case, somes a gold medal by her accomplished handicraftsmanship, though the uniquires recken the opaque pigment here used detracts from the vivacious colour displayed by her work last year. of the head in particular, the figure ex-cellently modelled in its detail. The Jewelry Class, as we have already ably noticed. This year's medal can-

not be taken by this lady, David Evans, of Manchester, sends a "Roll of Honour" frame in oak, carved with laurel leaves in a distinguished way which fully merits the gold medal accorded. The work evinces a knowledge of old work and traditional manner, while the author has impressed his personality an original and crisp handling. adding illuminated heraldic shields in the head of the frame. This is quite one of the best things in the Exhibition. Mr. L. R. Squirrell, of Ipswich, takes a silver medal for delightful studies and etchings of old houses and sheds, and Mr. Fred C. Jones has a like reward for fine book illustrations of "Gulliver's Travels" (Bradford 13). We are much taken with a glazed pottery figure of a woman in green and dark brown purple robe, from Hanley School by Mr. Joseph Bennison, whose work is of great interest in colour and modelling, for which he wins a silver medal. Miss Grace Ashmore, in the same case and from the same school, is represented by her bronze medal Piping Shepherd on a Rock, in pottery. Miss Gertrude Green has a Japanese-like figure of like kind for which a book prize is given, and the penguins by Mr. Lionel Peters, of Greenwich, are "commended." The figure studies from the nude this year are not so brilliant as usual; but Miss Constance Carver, of Leicester, has a silver medal for a direct and well-shaded-in graphic back view of a man vigorously drawn, and Miss Dorothy Bunn, of Birmingham, has fine shaded heads from the The stained glass is exceedingly well displayed this year, but the wallpaper designs are puerile. Miss Doris Boulton, of Deptford, sends some excellent coloured lithographs, for which she won a bronze medal.

### ROYAL COLLEGE OF ART STUDENTS' WORK EXHIBITION,

Notwithstanding the fact that this is the smallest show which we have ever seen since the Royal College of Art was established, the Board of Education has not yet made up its mind as to how the prizes and studentships are to be allocated, or, indeed, whether the prizes will be awarded at all. There may be a good reason for this delay, but even if competitors are few this season, there is all the more reason, surely, to encourage participators by businesslike conduct on the part of those at the head of affairs. Officials with comfortable posts possibly care little how much often depends upon some individual student's comparative success or otherwise negligence. Indeed, our inquiry only elicited a pained surprise at our wonder of the hesitancy of the Board.

The private view of the exhibition was last Friday, and it is now open to the public in Exhibition Road, behind the Science Schools in the Royal College of Art. If small, the exhibition has the merit of being compactly arranged all cn one floor and within compass, but otherwise the advantage is small, too, because there is not much of it, considering what the cost to the country just now is when money is so bally needed for more serious business; not that we are blaming the professors and officials, for, obviously, without the class attendances, there can be no material for production in proportion to the outlay.

Taking the architectural exhibits in the order of their hanging, having little else to guide us, we begin with one of the Royal Institute of British Architects, "Testimonies of Study," In other art centres these studies turn up, and it may be said in a correct way, but, for all that, it is

not easy to apportion what share the many and various professors and staff have to do with such evidences of equipment on active individual service. A first year "specialising" design (No. 25) is by Mr. H. St. J. Harrison, the subject being a monument to Lord Roberts. The structure is set upon a raised platform with an equestrian figure of great soldier seated in front of a tower surmounted by a group of "Victory." driving a chariot of three horses. Steps go down on all sides save where the ugly raking wall at the rear stops them off. An open loggia forms the base of this tower, and above its rusticated base with the pedimented openings on all four sides, the walls are devoted to military trophies suggested by the French Renaissance type of ornamentation, and wreaths adorn the attic stage with swags drooping on either The figures are most indifferently depicted.

Nos. 26, 28, 31, 33, 37, and 39 are more or less correctly termed designs for "A National Art Library," and seemingly proposed as one wing of a bigger scheme for spending public money when, perhaps, the war is done with. Mr. Harrison (No. 26) shows a long block of building with reading and index rooms flanking a central cortile or vestibule, and this above stairs has magazine alcoves, the stairs being at the extreme ends of the premises, to fit in, as we suppose, with the adjacent or ultimate additions. The stairs really are not exclusive to this National Art Library. The façade in this case has coupled columns between semi-circular arched windows having disc niches above them for the busts of great men, and surrounded by wreaths or garlands to give a due solemnity. The cupola in the middle of the structure has a very stilted and meaningless look, speaking as we can only do for the library, for it is that alone with which we are now concerned. There is a lantern story below the dome, with windows of lofty proportions. Perhaps this scheme is as good as any, though the mansard roof is not very pleasing, and the lighting is insufficient with the projecting bookcases dividing the rooms quite properly into bays, but tending, of course obscure the light in the centre of these lofty apartments with florid coffered ceilings above a very heavy cornice. detail sheet is restless in draughtsmanship; otherwise for a "first-year advanced class student," the design is commendable, even if the elevations sadly want a good plinth, which is a bad fault.

Nos. 30-32 are by Mr. J. C. Taylor, of

the Upper Division school. His design for the art library is not so amply illustrated. and has no complete plan, but a careful study is figured on a separate sheet for the tympanum of the central pediment, with the figures much better put in than usual. The sheet of details, too, is good in this respect. The Ionic caps have coarserespect. looking volutes. The segmental-headed windows in the rusticated plinth part of the façade suggest a lack of light behind the foliated grills, which are intended to give protection, perhaps, and add an interest to these comparatively poor sort of openings. The roof, being flat pitched. is hidden by the balustraded parapets The coupled columns are rather hackneyed and so is the Italianlike treatment windows, such as the late E. M. Barry rather fancied. It is notable because of the professorial fuss about advance and tall talk about Art in Architecture, and it looks odd to find contemporary professors pupils reckoned in the same category as those of Professor E. M. Barry. Possibly this result is due to the fatal effect of try-ing to be merely "scholarly," a word used really when a design appears to possess no virile merit.

The paneity displayed by the treatment adopted in No. 29 lg Mr. J. S. Krook is largely due to a thin line of brown info draughtsmanship and the wide-spaced row of single-fluted Douc columns. The pedimented windows with neat architraves see between this colonnade are refined, and in reality would work out well in execution having more breadth of walling, which is no small gain. The square heads of this fenestration would insure more light. We much prefer the cupola in this design to that of No. 26, but, internally, the dome would be quite dark, unless a skylight is intended at the crown of the structure, and which, indeed, may be intended between the upper and the lower domes. This, however, is not clearly set out. author has shown a quiet scheme of colour decoration in reds and blues. The galleries to the reading-rooms come above the windows, and there appears to be no top light. The remark of the Judges in the National Competition, which we have quoted in our notice of that exhibition, as to the sections not properly showing the intended construction of a building, certrinly equally applies to the students of the Royal College of Art, if we take these drawings as evidence.

No. 33, by Mr. M. C. Oliver, is architecturally indifferent, being devoted to a fulsome decorative scheme. No. 37 likewise is made unduly subservient to its colour adornment, which evidently is the main idea of its author, Mr. T. C. Eastmain idea of its author, Mr. 1, C. Daw well. The design marked 59 is the work of Mr. J. Xixon, who limits his proposal well and almost entirely. We preto decoration almost entirely. We pre-sume he is not "specialising" in architecture, as some are said to be. His or-namentation is much too ambitions for even a National Art Library. Mr. G. C Styles represents the "Advanced Upper of the School by his monument Division to Lord Roberts (No. 24). It consists of a short panelled obelisk-like erection. having tomb-like recumbent figures of Egyptian females stuck up on end tilted against the inclined plane on the cardinal faces of the "obelisk." The detail is course, and soldiers in contemporary khaki range at the angles on guard in close order of single file, crowded together to give room for an enormous panel with brobdingnagian lettering for the word "Roberts," in case we should forget. This is, however, a capital set of sepia-washed drawings. In No. 22 Mr. Styles furnishes a design for a public library, if we read the sections correctly. The drawings are unfinished in pencil. Massive columns of the Ionic order are employed singly, with big windows between them in two ranges to amply light both floors, one being the gallery level of very lofty apartments with flat ceilings well treated. The building has a substantial plinth pierced by square windows to the ground story. A very flat and fissy pediment marks the middle of the façade, and there is rather a clumsy look about the scheme, which is hardly done justice to by the detail study exhibited, though it is capital from the scholarly standpoint, which has its limitations. It would be a poor criticism to describe a poet's work by such a second of the standard of the scholar standard of the scholar s term. Mr. Styles shows a set of almshouses, with a dining hall schemed seemingly upon conditions similar to a corresponding proposal, obtaining a Book Prize in the National Competition, by Mr. C. B. Stewart. The College of Nat design, No. 22, by Mr. Styles, is in an X pensive stone treatment of Jacobean char acter, well worked out in that respect. but having a very indifferent plan and internal w.c.'s opening out of the bed-rooms. Convenient, no doubt, for old folks; but they are apt to be very dirty in their habits, and, anyhow, the arrangement is not sanitary, seeing that the lobbies have vision.

Kinght, ments the same remain, and both in a way, perhaps, are clever Mr. Lawson's Lord Reberts' Memeria Mr. Lawson's Lord Reberts' Memeria Chapel is quite prais worthy 5, 7, and 8). Some excellent studies are hung in the room of existing and historic types of design done by the students of the Lower Division." These include Gross confirmment, bronzes, and tellefs. There is to be also seen a 'Library Study' of mediaeval foliage from Lincoln Cathe iral.

In the Sculpture School, as usual, very capital work is to be seen, and a series of easts show a recumbent figure of a mode girl variously treated from the same model, the difference structurally being in the way in which the extended arm is managed. Mr. C. T. Wheeler leaves the hand outstretched unsupported. Mr. J A. Floyd uses a book as a prop, which seems needed in sculpture, and Miss Jessie M. Riding uses a crouching monkey for the same object, caining a suggestion of contrast, for the beauty of her figure is very attractive. Mr. W. S. Wilkinson's figure rests her hund on a vase. The attenuated legs of this model are to be noted. Mr. R. T. Cotterill shows in No. 13 a modelled design for a mantelpiece. rather capable, with a restrained note about the work and a figure panel over the fireplace. The unfinished composition for a similar subject, by Mr. C. W. Smith (14), is, however, much more suggestive with the curved in lines of the main cornice to the room in which the chimneypiece is to be placed. The usual arts and erafts are represented by much that is excellent and much that seems inconsequential and over-elaborated, but the glazed pottery seems equal to the standard of past years. The etchings shown in the gallery beyond Professor Lethaby's room are interesting, but somehow this year are less impressive than on the last occasion. Some clever and inimitable character studies are on view by Mr. George Belcher, the "Punch" artist, to liven up the room.

The School of Painting includes decorative and other renderings of the stories of Shahrazad or the Merchants' Story of the Jinui, of the Ladies of Bagdad, and of the History of King Younan, all very elever, no doubt, if a trifle far fetched for contemporary needs, and this, prasumably, should be the aim of the Reyal College of Art in stuffing the art such of the country. Perhaps subjects for training are of see udary importance has their subjects,

Rigid economy is being exercised in its execution, and it is expected that it will be completed for an outlay of £9 000. The plans and particulars in connection with the sheune were prepared by Mr. C. F. Wike, the city engineer, and the work is being carried out under his supervision.

#### THE ELIZABETHAN OAK ROOM, LEIGH HALL, ESSEX.

This fall dates from 1561, and was always receivated for the oak panelling and curved ak work within its walls. The Elizabethan Oak Room from Leigh Hall, Essex, is now in London. As the accompanying note states, the room can be reinstated according to the the room can be reinstated according to the oig hal plan given, but the chimney-piece at I panelling could, of course, be adapted to another plan. We understand that the room has been temporarily erected in London, in her the direction of Mr. Mark H. Jindge, A.R.I.B.A.—It can be viewed on application to him at 7. Pall Mall.

Essex is not a county particular to

Essex is not a county particularly favoured by the collector or connoissenr; indeed, on

TOP OF PILASTER.

among English counties, unduly overlooked ground, it is the Cinderella both for its own special features and its con tents. In this last respect the panelling from Leigh Hill here illustrated is important enough to correct what is only too common a view of the county's claims to consideration, and will serve to show what may still be sought for without invariably overworking districts of a more brilliant reputation to the art hunter.

Leigh Hall, now demolished, dated from 1561. Its architectural interest resided in its wealth of oak work, and the very fine carving of that. The work belongs to a period which is the most interesting point in the development of the English Renaissance, where we hind-for styles of architecture are no more to be bound by kings and queens than any ther art - Elizabethan merging into Jacobean. The nature of the work is such as to recompense the genuine art lover for the absence of any definite historical connection with the Hall, or Mansion House as it originally was known. The manor of Leigh does, however, ander surprisingly diverse forms of the name, onder surprisingly diverse forms of the name, go back to the beginnings of our history; it figures in Domesday; records occur in the reign of Edward II., and its later history is associated with such names from English history as Rich. Warwick, Bolingbroke, the manor passing from the last named to other members of the St. John family. The town of Leigh hes in the vicinity of Southend, and is given us many payad heroes and yovagers ven us many naval heroes and voyagers-Sir Richard Haddock, Whittaker, Andrew Bittel, Camden remarked upon the "lusty seamen" with which the "pretty little town" was stocked. It may be of interest to refer in passing to the "Collectanea Spectantia Manerium de Leigh," six volumes of manuscripts, as yet unpublished, in the library
of the Essex Archaeological Society.
Turning now to the oak room itself, which

in he completely reinstated in all its original · alt; of the joiner's work.

the panels, together with the carving throughout, and the culminating feature of the chimney-piece, give the room a real importance, best appreciated by a comparison with other examples of this period, like the two "oak rooms" in the Victoria and Albert Museum. One of these was removed from a house at Bromley by-Bow formerly known as the "Old Palace," dating from 1606. As set up in the museum the panelling is slightly rearranged, with parts renewed. The room rearranged, with parts renewed. The room measures 28 ft. by 20 ft. 6 in., and the panelling is square throughout. The Leigh Hall room has a length of 35 ft. and a width of 25 ft. 5 in., and the apt-to-be monotonous effect of square panelling is relieved by a charming use of diamond panels above a more complex geometrical design formed by super imposition of simple rectangles.

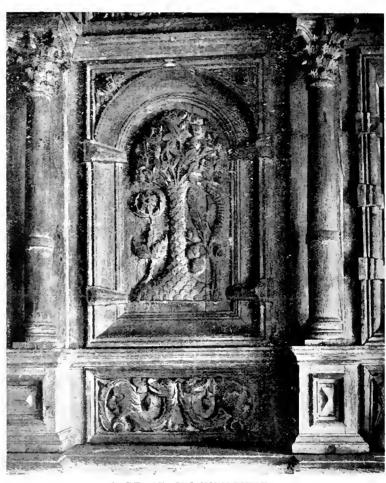

The vertical divisions so essential to the aspect of a large room are provided by characteristic pilasters, the precisely cut orna ment on which is testimony to the hardness of the oak. This is oak treated as the Greeks treated marble. The panelling is completed by a carved frieze below the final cornice,

in the right place, a minor echo of which we perceive in the subsidiary points of the rooms occupied by the pilasters, the whole being held together by the surrounding frieze.

Panelling in such extent and of such a high standard, in so line a condition, as Leigh Hall has provided us with, will become more in request as it becomes more difficult to obtain. The love of a "panelled room" seems to be inherent in our nature. It is interesting to remember that the panelling of esting to remember that the parening Elizabethan times and downwards was only a reversion to the original practice of covering the walls with wainscot, which had given way to tapestry wall-hangings, and we can see a reflection of the play of fancy so easy to be indulged in with tapestry when the idea of oak panelling came to be fully developed. It coincides with the rise of English furniture, and panelling should really be considered as a link between the purely archi-tectural form of a house and the intimate embodiment of life which alone can give a

meaning to each individual room.

So regarded, we shall find that the peculiar charm of an old English interior is to be

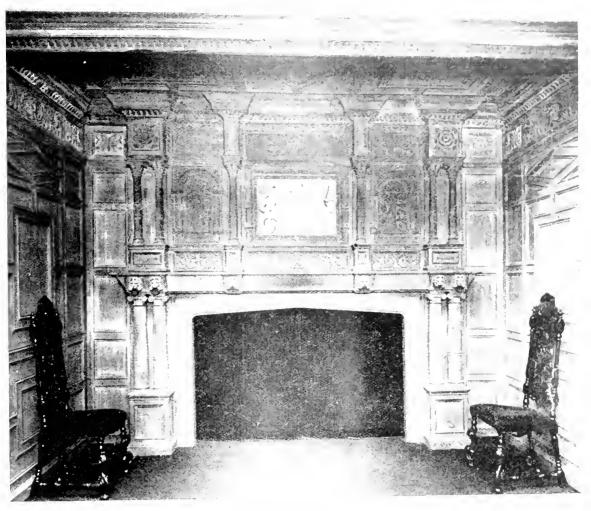

PART OF CHIMNEY-PIECE.

broken up by grotesque heads over each pilaster, which have almost a Norman vigour and much of that noble quality of the true grotesque on which Ruskin was so emphatic. is no dado, and the panelling is ex tended down to the floor, the height from floor

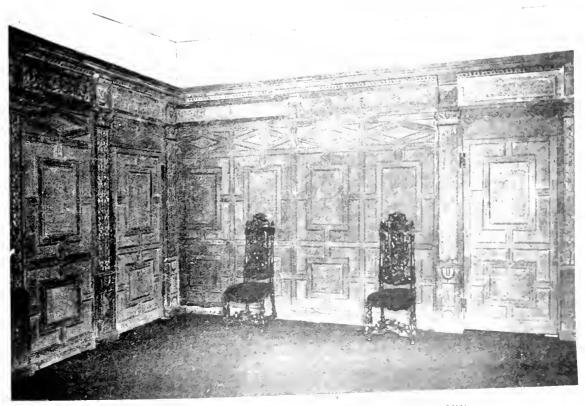

to cornice being 9 ft. 6 in.

Further detail of the room is hardly necesexcept a reference to its chief feature. the chimney-piece. This is an integral part of the room, with a more than usual archi-tectural character. The fireplace is always the nucleus of the English home, and the elaboration we find invariably bestowed on it is only the natural consequence of this impor-tance persisting throughout all styles and periods. Too often we find it indeed overdone, not quite in harmony with the rest of the room, as though it were something imported that did not really belong there. But there is no mistaking the unity achieved in the Leigh Hall room. It is a composition in features, the beautiful preservation of the model is perhaps what first strikes us. The addition of the panelling is splendid, the souldings being striking testimony to the salty of the joiner's work. The design of the right concentration of elaborated detail

explained by a sense of what in the Renaissance of Italy would seem but an unjustified violation of the spirit of a particular style. In Italy interior and exterior are dominated by the same rigidness, the actual coldness which seems the setting necessary to Italian warmth of sentiment. Unrefieved, this deliberate ansterity must ever fail to satisfy the ineradicable English nature seen underplaying every current of our architecture. Even where English reserve has flown to the Italian expression for its outer mask, its inherent love of freedom and healthy vigour was not to be denied in the intimacy of the home life, and so we find the early Englis joiner indulging in variations on the "orders English which the mason would hesitate to follow. Function and nature of material must always be the prime factors in determining the during qualities of architecture, factors which must justify the craftsman in the degree of departure from recognised standards, in pre-cisely how far he may experiment with the expression of a certain dignity of character.

THE CHIMNLY PLECE.

AN ANGLE OF THE ROOM FROM LEIGH HALL ESSEX.

of the house are asked to conform to certain e aventions, all the more can this conformity be receased in other, more personal aspects, and we shall take joy in finding that there is after all something a little more tolerant of natural impulses behind the reserve which the English character so lives to assume.

Take only the clumney-piece from Leigh Hill and the irresistible fascination of the "architecture" which in any other connec-"architecture" which is any other connection would be grotesque parody. Here, the Corinthian columns are like rapid sketches of semething actually seen abroad, and all the more convincing than orthodox Classic models based merely on some "Parallel" of the orders, faithful enough reflections of Vitrivius or Palladio but wanting the personal touch the core of parallel solutions. the orders, faithful enough reflections of Viruvius or Palladio but wanting the personal touch, the sense of a personal feeling by Mr. Frank May.

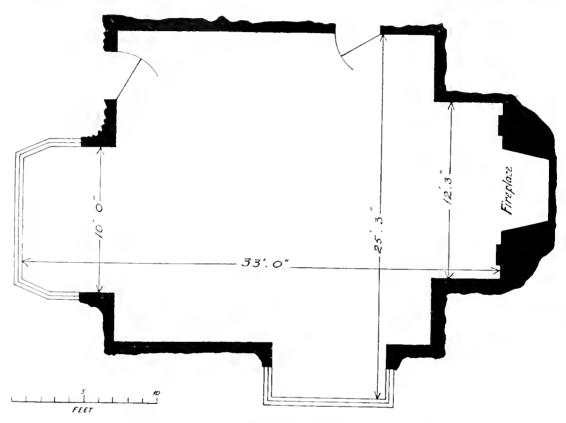

pensioners died. The institution is greatly indebted to those old friends of the charity who so generously supported the treasurer appeal last November: the amount received saved the Committee from realising any invested capital, and so retained the financial position acquired during the past sixty eight position acquired during the past sixty eight years. The Committee tender their hearty thanks for their kind assistance to the trustees (Mr. F. J. Dove, Mr. Frank May, J.P., Mr. Thos. F. Rider, Mr. T. Stirling and Mr. T. J. Bolding), and to the honorary auditors (Mr. J. T. Bolding and Mr. Hubert S. Ward, F.C.A.). The Committee are informed that Mr. George R. Holland with kindly consent to act as president for the coming year.

cluding salaries, rent, advertising, stationery and postage, had been reduced from £261 7s. 6d. to £222 10s., and the net result was that the balance on deposit current account and with secretary was reduced from £794 10s. 6d., at which it stood last year, to £521 13s. 11d. The total income from all sources was £2,600 18s. 7d., against £2,928 14s. 4d. The Chairman concluded with an earnest appeal for additional subscriptions to meet the difficult situation that would surely ensue in the building trade before long.

Mr. May moved that the balance-sheet and statement of accounts be received and adopted, and this having been seconded by

Mr. Shingleton, was carried unanimously.

On the motion of the Chairman, seconded by Mr. May, Mr. George R. Holland was re-elected as President, the Chairman expressing a hope that they would speedily see him in

PLAN OF THE ROOM FROM LEIGH HALL, ESSEX.

for the thing done, without which art is merely reproduction of what has been done already, sacrificing what an interpretation gams. Jan Ivon.

# BUILDERS' BENEVOLENT INSTITUTION.

The sixty-eighth annual meeting of this deserving charity was held on Wednesday atternoon at Kohel-Nor House, Kingsway, W.C. In the absence of the president, Mr. George R. Holland, who is at the Front, Mr. John Bolding, past president, was called to the chair.

The annual report of the Committee Management was read by the Secretary, Mr. Thomas Costigue. The Committee expressed their deep regret at the continuance of the war, and wished to mark their appreciation. war, and wished to mark their appreciation of the action of the president and the members of the Committee who were serving in his Majesty's Forces. The report continued: The past year has been an exceptionally trying one for this charity, as it, in summon with othe hastit tions, has experienced the last of much support in compact and the last of much support in compact national to be much as appeals made to meet mational to be. The Committee deplace the death of Sir Arthur Charles Lucis, Bart., who for more years was a general contributor to this institution and or end treatures. During the past year two men as I four women have been added to the past years the summer of additional trustees. Turning to the expenditure side, the amount of pensions and burial moneys paid the 13 women. During this period five male

balance-sheet and statement of accounts, which had been carefully scrutinised and audited by Mr. Hubert S. Ward and himself. He went through the details seriatim item by item, comparing them with those of last year, and pointed out that, considering the excep tional circumstances, the institution had well maintained its position, although he felt that there ought to be a much more general response from members of the trade, and that the number of subscribers and donors ought to be larger. The annual subscriptions last year. £368 I6s., only showed a falling off of less than £10 on the previous year's amount, £578 8s., but owing to the decision to abandon the annual dinner the donations showed a serious diminution. The deficit was reduced by a response of nearly £100 to an appeal sent out by the treasurer, Mr. Frank May, but even then they only received in donations

The Chairman next submitted the annual, full health and strength at the head of the

On the motion of Mr. Frederick Higgs, seconded by Mr. Carter, Mr. May was re-elected as treasurer, with hearty thanks for his successful efforts by circular to increase the funds of the institution.

The Chairman said the next business was to elect eight members of committee in place of those retiring by effluxion of time. He suggested that the retiring members be reelected, and that he put the names separately.

Mr. J. Chessum asked before the names were given that the number of attendances for the past year of all members of committee be read out. There were some who had not been more than once or twice to the monthly meetings, and in the past a member put in an appearance for the first time for twenty years. No one present recollected him, and the Chairman had to ask how it was he had come there. To send invitations to such members was a waste of the secretary's time, of stationery and postage, and he moved that all who had failed to attend more than twice in the year be struck off the committee.

Mr. Northcroft and Mr. F. Higgs expressed sympathy with Mr. Chessum's outspoken

The Secretary read a list of the committee,

and opposite many names were recorded "attendances nil" and "once" or "twice."

The Chairman said there was another side to the question. No fewer than fifteen mem-

bers of the committee were past-presidents. who retained their seats ex-officio, and many of them were well advanced in years. No doubt it was necessary to have a live committee, but these gentlemen had contributed generously and still gave liberal aid, and even if these left the routine of committee work to younger men, the trifling sum expended on postages brought in a large return.

Mr. Northeroft moved, and Mr. Higgs

seconded, a motion that the secretary write to the members who had failed to attend committee meetings, reminding them of the fact, and that no further action be taken till next

year.

This was agreed to, Mr. Chessum's motion being withdrawn, and the following eight rebeing withdrawn, and the following eight retiring members of committee were re-elected en bloc: Mr. H. Arthur Bartlett, Mr. T. Hall, Mr. B. Hannen, Mr. H. Holloway, Mr. J. W. Lorden, Mr. J. C. Nicholson, Mr. F. G. Rice, and Mr. William Shepherd.

The hon, auditors, Messrs, J. T. Bolding and

H. S. Ward, were re-elected, with thanks for past services, on the motion of Mr. Shingleton, seconded by Mr. T. Stirling; and votes of thanks to the committee of management and the trustees brought the proceedings to a close.

### THE LONDON COUNTY COUNCIL.

At Tuesday's meeting of the London County Council a report was submitted by the Improvements Committee recommending that Earl Grey's option on the crescent site in Aldwych and the Strand be extended until 1917. The option price was £3,000 a year for taking a lease for ninety-nine years at a rent of \$50,000 a year, or buying the free-hold at £1,500,000. The committee have treated the past year on the moratorium principle and have extended the option.

The Local Government Committee reported

that they have authorised the destruction of documents relating to the late Works Department. "These documents," they ob partment. "These documents," they observed, "cannot have any bearing on questions that may arise as to the general working of the late department, and the space is needed for storage of records of permanent

value.

The same committee stated that they had considered whether the work in connection with the ground plan and the 6-in. map of London should be proceeded with at the present time, and also the whole question of the continuance of the work. They arrived at the opinion that the value of the ground at the opinion that the value of the ground plan to the Council justifies its being kept up to date. The necessity for the separate publication of the 6-in, map will disappear now that the Council has prepared the municipal map. This map will be kept up to date, and the cost will become a general establishment charge.

General Purposes Committee recommended that, on the understanding that the Council accepts no responsibility in the matter, Mr. W. E. Riley, the architect of the Council, be permitted to advise the governors of the North-Western Polytechnic Forther as to modifications of the plans and specifi-cations of the North-Western Polytechnic with a view to the erection of the building at a cost within the amount at their disposal

The Commissioners of His Majesty's Works have inquired whether the Council would be willing to undertake the maintenance and management of the new Government housing estate at Well Hall. Woolwich, which has been provided for the accommodation of munition workers. The estate, which is about 100 acres in extent, will comprise altogether some 1,300 houses, and the gross rental is About 800 estimated at £37,000 a year. houses are completed, or are on the point of completion, of which about 100 are occupied, and the remainder will be finished shortly. The Housing Committee recommended that the Council accept the responsibility, and that the estate be managed on the lines of the Council's cottage estates.

The applications of the town council of New port, Mon., for leave to horrow £6,950 for road widening and £1,493 for the purchase of a site for a destructor have been sanctioned by the

(d) The clear unsupported spec of any part of any side, end, or not ver part tron shall not be more than four times

the least thickness of such part (i) The aggregate thickness of the ma-terial shall be at least 6 m, measured at right angles to the face of the wi-

right angles to the fact of the wellProvided that a less theories shell be allowed in any case in which in let it. Lendon Building Act, 1494, such less the kness is prescribed, and provided that many case in which are external wall or work in of an external wall is not supported or carried or secured by the reinforced or nervet skeleton framed construction within the limit of leight and length prescribed by the First Schedule of the London Building Act, 1994, for the ourand length prescribed by the Flist Schemie of the London Building Act, 1994, for the purpose of determining the thickness of walls, such external wall or portion of external wall shell be of a thickness not less than that prescribed by the state of the second of the s sembed by such schedule.

#### FACING.

129. All walls and facing materials shall be incombustible and shall be securely connected

to the pillars, beams, floors, and other con tiguous parts of the reinforced concrete construction.

#### PRESSURE ON PANELS.

130. Each panel in any external wall shall be designed to resist safely a horizontal pressure equivalent to a static pressure of at least thirty pounds per square foot assumed to be acting uniformly over the area of one panel from either side. (See regulations 21 and 22.)

#### OPENINGS.

131. The aggregate area of openings in c ternal walls constructed in accordance with these regulations shall not exceed in a wall of any story above the ground story two-thirds of the whole area of such wall, and the aggregate width of such openings in such a shall not exceed three-quarters of the whole length of such wall.

#### PARTY AND DIVISION WALLS

132. Party walls and division walls con structed in reinforced concrete in accordance with these regulations shall be of such thickness as may be necessary to comply therewith, but in no part shall such walls be of less thickness than 8 inches.

133. Provided that any such party wall between a building constructed in reinforced concrete and a building of the warehouse class constructed in accordance with the Rules of the London Building Act, 1894, or as a steel-framed building, shall not be in any part less than 13 inches in thickness.

MORTAR.

134 All brickwork, stonework, and plain concrete shall be executed in Portland cement mortar. The mortar shall be in accordance with the Council's by-laws from time to time mortar. in operation.

#### PRESSURE ON BRICKWORK.

135. The pressure on any brickwork supporting reinforced concrete work shall not exceed the following—

Tons per square foot. ... 12 Rickwork, sq. Blue brick in cement mortar stock in cement mortar term of the fine louding bondon stock in cement mortar ordinary brick in cement mortar stock in

RATIO OF HEIGHT TO THICKNESS. Such brickwork shall not have a height without proper lateral supports of more than six times its least thickness, but any such brickwork with proper supports may have a height between such lateral supports not more than twelve times the least thickness of such brickwork. Such thickness shall in no case be less than thirteen and a-half

### PART VI

#### FOUNDATIONS

## Correspondence,

#### SHILLING PLANS FOR RURAL COTTAGES.

Sig. The Society of Architects has very properly. I think, addressed the "Board" on the subject of its report and batch of drawings and specification, which are published at the price of 1s. 6d.; specification in detail, one penny; and full-size brawings of window details, one shilling.

The idea of the Board and of its technical advisers (members of the R.I.B.A.) seems to be on the liues of "every builder of a cottage his own architect," and, in trying to defend itself against the criticism of Society of Architects, it indulges in that form of casnistical reply to which one is so well aconstomed just now within the walls of the House of Commons.

There is much to say on this particular form of depriving architects of work, and I venture to ask, through your columns, Mr. Raymond Unwin, F.R.I.B.A., and Mr. Charles E. Varndell, A.R.I.B.A., two of the architects engaged in this matter by the Board, to favour your readers with their view of the matter.—I am, Sir, your obedient servant.

WM. WOODWARD, F.R.I.B.A., 13, Southampton Street, Strand, W.C., July 24, 1915.

Sir,-Under the above heading in your ssue of the 21st inst., you set forth exception that has been taken by the Society of Archithat has been taken by the Society of Archi-tects to the report of the Advisory Commit-tee of the Board of Agriculture and Fisheries on the subject of rural housing; and you give the reply of the Committee's chairman and your own views.

At the moment I cannot again go through the Committee's report in detail, but some months ago I carefully perused it with much satisfaction, as being, in my opinion, very sound and the most helpful contribution to the solution of a matter of national importance that had come under my notice. I know nothing of the correspondence between the Society of Architects and the Board of Agriculture and Fisheries beyond what is given in your article above referred to, and sin-cerely hope that the Society has welcomed the report as I do, and has only as a matter of detail taken exception to the fact that the employment of an architect is not therein urged; otherwise, bearing in mind the national importance of the matter and the great value of the report, I venture to think the society has taken a somewhat narrow and class-interested view of a matter calling for broad-minded and generous treatment

As an architect, surveyor, and land agent with a varied and, mostly, country practice, I stand to lose as much as most by such a report if its effect be to lessen the employment of professional assistance in such matters as rural housing; but be that as it may, I whole-heartedly welcome it for the reasons I have stated. With others I (as an architect) often regret the crudities in cottage design, often perpetrated by landowners and their agents, are not obviated by the taste and skill of the architectural profession: but where such is called in the temptation of going beyond this often proves irresistible, and beautification is given which adds to expense. Everybody wishes that such could be afforded; but its deletion is less vital than the provision of accommodation at rock-bottom price, and landowners and their agents, who are sometimes more closely in touch with the hard facts of cost, etc., should, as I have done, find the report both inspiring and helpful. If they can afford the refinements that should result from an architect's advice, so much the better: but the more pressing and primary consideration is accommodation, and I urge this fact more strongly than I should have a year ago, as I

the expenditure on this war must mean simpler and rougher conditions for most of in most directions-perhaps first housing.

Seldom do I trouble the Press with my views, and I choose you for this infliction as yours is the only architectural paper that I have taken continuously during the last nearly twenty-five years.—I am, Sir, yours

faithfully,
R. E. Brinkworth, F.S.L., M.S.A. Bath, July 25, 1915.

### ACTION AGAINST THE INSTITUTION

OF CIVIL ENGINEERS.

ELLIS DE VESIAN v. THE INSTITUTION.

Sir, In view of the full report which was given in your issue of June 16 of the proceedings in the action of our client, Mr. John Stuart Ellis de Vesian, against the Institution of Civil Engineers, we trust that you may see your way to give equal prominence to the result of our client's appeal to the Court of Appeal against the decision of Mr. Justice Neville of June 9 last, refusing the iniunetion asked for, namely, that the defendant and its president might be restrained antil the trial of the action or further order from proceeding on their resolution to expel our ient from membership of the Institution, This appeal came before the Court of Appeal on the 19th instant, and occupied the court during the greater part of two days, and resulted in the court unanimously reversing the decision of Mr. Justice Neville and de-ciding that our client was entitled to the injunction asked for until the trial of the action.

This results in restoring to our client his full rights, for the time being, as a corporate nan ber of the Institution of Civil Engineers, but, as very little publicity is likely to be given to this particular aspect of the case in the Press, we would ask you to make it prominent by inserting this letter in your next issue. Yours faithfully,

ELLIS DE VESIAN AND CO. 8, Old Jewry, E.C.

#### DISTRICT SURVEYORS AND THE L.C.C.

Sir. In your journal of the 14th inst., you mention, among the proceedings of the London County Council, the report of the Building Act Committee, that they recommended the Council to dispense with my services, as well as those of another district surveyor, as from November 30 next.

The legality of the proceedings is, I believe, still in question in another case, and I had received and agreed to the postponement of any question as concerns myself whilst awaiting the decision of the court, I having, with the Council's consent, appointed my leputy with full powers, in accordance with Section 142 of the London Building Act, 1894. You will see, therefore, that at present I re-

You will see, therefore, that at present 1 r tun my official position.—Yours faithfully, FREDERICK WALLEN, F.R.I.B.A., District Surveyor for St. Pancras South. 96, Gower Street, W.C., July 20, 1915.

-000-

Official information has been received at Official information has been received at Lockerbie that Lieutenant Robert Douglas, previously reported wounded, has died from his wounds. Lieutenant Douglas, who was forty-two years of age, was the only surviving son of Mr. John Douglas, land steward, Murrayfield, Lockerbie. He was in business as an architecture that them and large a wilder and these in the town, and leaves a widow and three children.

The Baptist Church trustees have approved The Baptist Church trustees have approved plans for the conversion of an existing chapel in Manchester Road, Barnoldswick, into a Sunday school for the accommodation of 500 scholars, at an estimated cost of £1,600. This will necess tate the building of a new edifice, a site for which has already been purchased, with a frontage to Manchester Road. Plans for the new church (estimated to cost £6,500) are power. new church (estimated to cost £6,500) are now under consideration.

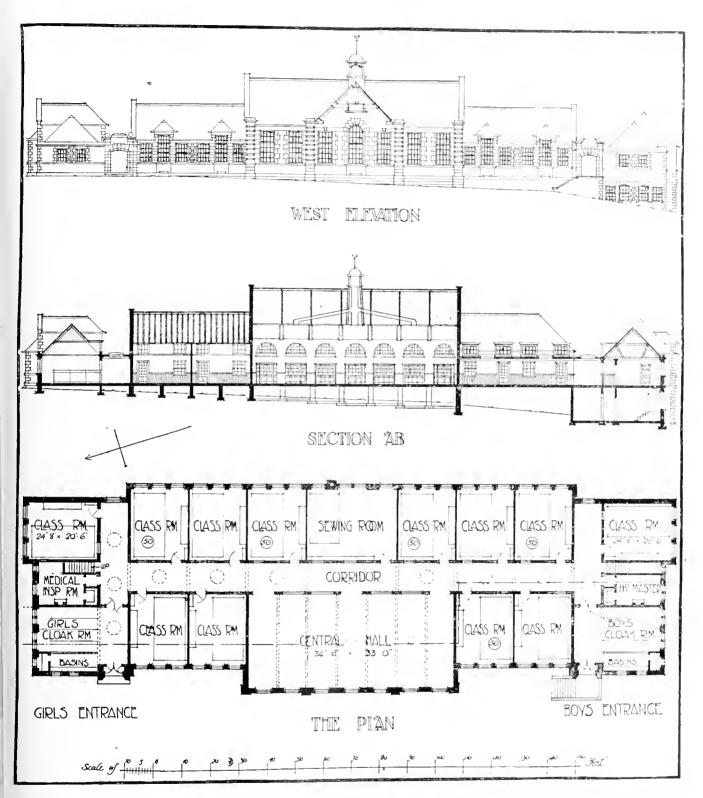

In consequence of the resignation of Mr. M R. Jones, as surveyor and inspector of maisances, the Abergele Urban District Conneil have con-In a Abergue Urnan District Council have considered the question of appointing a successor. It was urged that for the present there was no necessity to appoint a successor, and that the salary should be saved. A motion to this effect was carried, the appointment being deferred indefinitely. An amendment was moved, but defeated, that the appointment be deferred until after the war. until after the war.

## Our Illustrations.

CATHEDRAL PORTALS RHEIMS AFTER THE BOMBARDMENT

Fergusson says, "Rheims is perhaps the most beautiful structure produced in the Middle Ages." The fine photograph printed herewith to-day, showing the west front after its bombardment, was taken by the sculptor who has had charge of the sculptures and ornamentation of this great his toric church for the past twenty years. The picture gives an excellent idea of the havour wrought to the great portals by the German shells, and, as Anatolo France exclaims, the outrage is "infamie immortelle," making its authors "execrable a tout l'Universe pen authors "execrable a tout l'Universe pen sant." The view is taken looking towards the façade from the N.W. We have chosen it from the collection of some two hundred similar photographs forming the exhibition now open at the Leicester Galleries, Leicester Square, W. Our readers' attention was directed to this display in the BUILDING News last week, when some particulars were given descriptive of the Exhibition, which in cludes enlargements of many exceptionally artistic and well-defined studies of the more famous statues and groups of figure carvings. as well as a large series of notable details of the architectural elaboration of the fabric itself, which is not only one of the most exquisite cathedrals of its date in the whole of Europe, but ranks as the third in size in France, Amiens and Chartres alone surpass ing Rheims in scale and magnificence of de sign. The first attack upon it took place on September 17 and 19 last, when the shels falling on the church set fire to the roof, burnt part of the western towers, and shattered the windows and sculpture. The fusillade was renewed in November, and repeated last February, as well as during the month of July. A Commission was appointed by the French Minister of Education to investigate the state of the structure in the autumn of 1914, and photographs were taken as records illustrative of the condition in which the building was then found. Messrs, Ernest Brown and Phillips have prefaced their handy little catalogue of this exhibition of photographs with a quotation from the Commissioners' report. Before reproducing this paragraph we may mention that the pamphlet alluded to is presented to every visitor to the collection, and also add that the proceeds will go to the credit of the French Rel. of Fund. The admission charge is one shilling. The catalogue is interspersed with seven reduced reproductions of typical examples of the prints, including a general exterior view and also an interior of the Cathedral, so that the brochure is very useful for reference The same series of photographs is being shown simultaneously in the Musée des Arts Decoratifs of the Louvre, Paris. A smaller collection, which was lately on view by the Medici Society in London, served to enlighten many on the character of the desolation wrought by the Germans at Rheims, but this assemblage is by far the finest yet on view to public inspection in the Metropolis. The Commissioners' report, just referred to. says, "Although disfigured in its lines and in the details of its decoration, the Cathedral in the details of its decoration, the Cathedral of Rheims still stands. Its stout construction has resisted the shock of the projectiles. The roof of the building can be restored, the masonry repaired, but the sculpture can never be replaced, and the Cathedral will bear profoundly the mark of validalism which has surpassed imagination." On October 15, the bombardment was renewed, and repeated during the end of November and again in February this masonry repaired, but the sculpture can never be replaced, and the Cathedral will bear profoundly the mark of validalism which has surpassed imagination." On October 15, the bombardment was renewed, and repeated during the end of November and again in February this year. Another attack was made about July 16, and may occur again at any time in the mear future. Dr. Capitan, member of the "Commission des Monuments Historiques," has enumerated the further deplorable damage done since the official report to which we have alluded was presented to the Govern ment in Paris. The defence made by the Germans of their acts of vandalism is, of course, futile, and the following declaration

the Ares Coursel of the Archby hap-Rhead Last enquoted. In the name of Emane of the Cardard Archba hope of Rhemes and a system myself hour by according that processing to the improbable German most forms denote to the improbable German most forms denote the improbable German report. Note to the improbable German report. Note to the court in front of the incidence is the court in the incidence in the i year when the four authorised gospels, a simply I for printed in the English Bibbs, were compiled and quited to a in their present form. Fill the unith century this church are mind infact, but about 100 km like 100 km. Arch's ship Elbo founded the new cathedral, and Rumaldi, architect to Louis 1., the arch we are was sent by that morarch to assist in the building, which has trashed in 362 AD. A great fire destroyed the fabric in 1210, but will a two years the existing structure was begun, and Arcab shop Aubri de Humbert laid the foundation-stone. Jean d'Orbais was the designer of its plan. The first architect who succeeded him was Jean de Coup. He in turn was followed by Caucher. Coup. He in turn was followed by Catchel, and many more architects more or less known to fine took up the work as time went on. The consentation of the choir was celebrated in 1241 v.n., the erection of the rest of the Cathedral being continuous till 1481. A terrible fine happened in that year when the upper parts of the church were bully burned, the towers of the transcribency entirely consumed, or, as records say. being entirely consumed, or, as records say, being entirely consumed, or, as records say, being entirely consumed, or, as records say, being entirely consumed to the work of reparation under at army of artificers. The fabric escaped further harm, and remained substantially in that from the cort y days of the sixteenth. that from the early days of the sixteenth century til the great European War. The plan of Rhelias Cathedral measures 466 ft place of Rhelas Cathedral measures 466 ft in length and 96 ft, in width, the height being 122 ft, and those diamensions tally nearly with Amieus and Chartres. The building is vaid out on the lines of a Roman cross, with ousummate si, it as regards the poise of its parts and with reference fu solids and voids the west front is enabled by 550 status. The west front is enhabled by 550 statues allustrating incidents from the Passion of Our Lord, the life of the Virgin Mary, and scenes from other subjects, not forgetting to name the "Crivit desc." if a classic term can preparly be applied to such supporting Michael diguies is these at Riicins, which are spoken of by a recent writer as being beyond the courte of Rechn of Mary in Propagate de Soissons descend the are spoken of oy ... being beyond the courts of Roetin or Mestrovic, Betharde de Soissons des gued the Mestrovic, Betharde de Soissons des gued the home with the court of the florid neat west "rose windox," which is 40 ft in diameter, and till the Germans been barded the Cithedial it was entirely filled with beam tal 2 iss of late thirteenth century date. "The Gallery of the Kings" above this sandov is formed by a row of colossal figures set in the niches extending the whose width of the clevation. In the middle the "Bapt'sm of Coxis" is represented flanked by the Monarchs of France. The western towers are 277 ft. high. There should have been six towers to this Cathedral according to the architect's original design have been s x towers to this Crithedral according to the archited's original design but the four terminating the two transplats have mover been really completed. The Kings of France were consecrated at Rheims, and Clovis, when he was the Archbishop, anointed the Sovereign of his back with the new order of the source of the

## Currente Calamo.

V st yesterday mea, the overing was be defrom M. Roder's impressive bronze group, "The Barglers of Calais," in the Votera Pallie Garders without ceremony, To group is well worthy of the reputation its scriptor, and ne'y synchronises with contrast between the element intervendone of the most locable of Eugland's Queer's and the absence, hitherto, of any such that destat one on behalf of mercy on the part it is spense of the modern embediment of all that is barbar as in warrine. Whether the brave burghers, even after the lengthy stege the French had so gullantly endured, were quite as forform as M. Rodin represents them we have before ventured to doubt. That the groups the reures of which are about ste size is in united on a base far too high is certain. Compare the effect with that of the three times as lar as life size of the statue of Richard Cour de Lion in Palace Yard and its modest but quite sufficient pedestal. Pessibly the idea is to prevent the irrepressible London archin from effecting a closer a quantance with the figures or hopeless endervour. If one may judge by the daily to be witnessed evolutions of the Boy S outs and their less picturesque but proximately pushful, postprandral pals of the dinner hour, whose barebacked performances transform the sphinges which flank Cleopatra's Needle into centaurs.

Dearer gas means lewer dividends. The Gas Light and Coke Company intimates the payment of one for the past six months at the rate of £4.4s per cent per amount. That is the lowest for a 10 d many years. Ending eleven years in De ember, 1907. £4 3s, was paid, but from then, with cheaper cas, there was a gradual supresement to £4 17s. 4d. in June. 1914. Last December it dropped to £4 13s, 41 Early last year the ordinary stock was quoted £1073; by last July it had re-eded to 93; and at the present time it is round about 80. Why not pipe-line gas to London from the pit's month and sell a lower grade gas for heating at, say, Is, per 1.000 and leave lighting to the electric undertak.ngs". We should all use it then, and London would be smokeless.

On this juge of our issue of June 16 we reports I the refusal of Mr. Justice Neville on June 10 to make any order on the application of Mr. J S. E. de Vesian for an injunction to restrain the Institution of Civil Engineers from interfering with his rights as a member of that institution, or with his enjoyment of the use and benefit of the institutom, and from acting upon or enforcing a rea lation of the council of the institution purporting to expel him from membership, and from omitting his name from the register or list of members of the institution, and from announcing that he had been expelled from or had coased to be a member of the institu-Mr. Justice Neville was of opinion that there had been no irregularity in the jul, a' proceedings of the commil, and he de med to make any order on the motion The reanth of the come nappealed, and the apvos head for July 20 before the Master of the Roles, Level Justice Pickford, and Levil Justice Warrington. The Master of Let i distince Waitington. The Master of the Roberton and the appellant was only a 302 note for an anjunction until the trial contact their. There were points of difficulty and of some importance in the case, and it was more satisfactory that a decision

in these should be reserved until the trial. when evidence would be adduced in the usual way and discovery would have been obtained, There was no use in discussing these points at present. An injunction until the trial of the a tion would not hurt the defendants. and would prevent the plaintiff from being in any way injured pending a final decision. The Court would therefore grant an injunction until the trial. Lord Justice Pickford and Land Justice Warrington concurred.

At the meeting of the Town Hall Committee of the Manchester Corporation last Wednesday the question of the reinstatement of two men at the City Surveyor's Department was again considered. The matter was supposed to be settled three or four weeks ago, when the committee decided in favour of the men going back to work with the approval of the City Surveyor, but the Council, at its meeting on July 7, called for further consideration of the subject. The committee do ided on Wednesday last to find the men some employment and to recommend that they be paid as from the time they were discharged to the present.

We heartily congratulate Mr. Hammerton. the Thames waterman who has saved the public from the monopoly the Earl of Dysart claimed of the ferry rights at Twickenham. He well deserves to be associated hereafter with other humble but spirited champions of public right whose memory is cherished by all who value it, and the courage which has maintained it against usurpers in high places Epping Forest was saved by a poor forest woodman, who sixty years since stood boldly up to one of the lords of the manor, not that the liberal backing of the City of London should be forgotten, which spent £25,000 in costs during the fifteen years' battle that ensued. Similarly Timothy Beck, a Hampton Wick cobbler, in George the Second's time, is gratefully remembered for his stubborn opposition of the action of Lord Halifax, then Ranger of the Park, who tried to close it to the people.

A valuable paper by Dr. A. Maxwell Wil hams, M.D., B.Sc., the Medical Officer of Health to the City of Edinburgh, in the July issue of The British Journal of Tuber culosis (London: Bailhere, Tindall, and Co., 8, Henrietta Street, W.C. 1s, 6d.), will well repay careful perusal. Dr. Williamson, after a careful analysis of the health combitions of his own city, arrives at the conclusion we have always maintained that the right method of attack on tuberculous disease must be along the line of improved housing conditions. Here are his Doints :---

1. Pulmonary tuberculosis is a disease which in 70 per cent or 80 per cent, of cases occurs in houses of three rooms and under; the number of cases is larger in two roomed houses than in three; larger in houses of one room than in two; and the number of cases of tuberculous disease increases almost in direct proportion to the number of small houses in any district or ward of a city.

2. That since the year 18-2 the number of deaths from tuberculous has shown a rapid and steady decrease, and a like statement applies to the general death-rate indoor disease.

recons timerculosis has shown a rapid and steady decrease, and a like statement applies to the general deatherate and the deatherate from other forms of infectious disease.

3. That this decrease has been taking place quite apart from, and irrespective of, any succeed offset of

3. That this decrease has been taking place quite apart from, and irrespective of, any special effort to deal with the condition other than the preventive measures, which have been carried out in the ordinary match of public health administration.

4. That the establishment of sanatoria and dispensiones, while useful aids in carrying on a general cruiside azonist this form of disease, are not of themselves likely to be attended by markedly hene heid results in the absence of other definite preventive measures.

Had we spent half the money that has been wastefully devoted to National Insurance on healthy housing, we should have had ten times the value for it. For beyond all question, as Dr. Williamson says, "If statistics prove anything, they prove to the hilt that the disease originates and thrives in direct proportion to the unsatisfactory nature of the house and its surroundings; and they prove invariably that an improvement on these conditions is followed, as by the law of cause and effect, by an immediate fall in the tuberculosis rate,

#### >-OBITUARY.

We greatly regret to learn that Mr. Allan Whitfield, of Whitfield's Safe and Door Co., Oxford Street, Birmingham, died on the 14th inst., after a long illness. The business will be carried on under the same management, and we are sure the wide consideration so well deserved in the past will be continued in the future to this, one of the oldest and most enterprising firms in the kingdom, and second to none as regards its reputation for its well-known specialties.

We regret to hear that Mr. James Willing, head of the well-known firm of advertising flead of the well-known firm of advertising contractors, of 125, Strand, passed away at his residence, Rock Hall, Teddington, on Monday evening, the 26th inst., at the age of seventy-seven. Up to a fairly recent of seventy-seven. Up to a fairly recent period Mr. Willing took an active interest in municipal affairs, having at one time been hairman of the assessment committee of the City of Westminster. He was a prominent Freemason, being a member of many lodges, including the "Willing," which was named after him, and the "Strand," of which he was the oldest founder, and he was a liberal supporter of the Masonic institutions and an officer of the Grand Lodge of England. He leaves three daughters and one son, and his heery presence and general Lonhomie will be missed by a very wide circle of friends. The funeral will take place on Friday at Hampstead Cometery at noon.

#### COMPETITIONS.

CANBERRA—The Austranan manage.

Home Affairs states that he will shortly refor designs for the CANBERRA -The Australian Minister of vive the competition for designs for the Federal Parliamentary buildings at Canberra. The competition will be confined to the British Empire. The Minister added that this competition was only for Parliamentary and not for administrative buildings. Asked as to what the prizes would be, the Minister said they had not been fixed, but he expected that they would be the same as previously fixed—viz. £2,000 first. £1,500 second, £1,000 third. The Minister said a lot of work was being done at the capital, and he thought there was quite sufficient for the next six months

WHITEHAVEN.—The borough surveyor, Mr. E. E. Stiven, as assessor, has selected for the purposes of a joint small-pox hospital for the borough and several adjoining urban and rural areas the design prepared by Mr. 11. Irving Graham, of Harrington. mated cost of the scheme is £3,500.

#### -TRADE NOTES.

# WATER SUPPLY AND SANITARY MATTERS.

MATTERS.
OLDHAM WATER SUPPLY—An important addition was made on Wednesday to the Oblham water supply, when the new filtration works at Castbahaw were formally tion works at Castb-haw were formally opened. It is estimated that an additional 90 million gallons a year will now become available for supply purposes.

The Rural District Council of Doncaster have resolved that a town-planning scheme for the Careroft area be carried out by the council, with the co-operation and assistance of the Adwick-le-Street Urban District Council.

# Our Office Table.

By the recent death of Mrs. Sale, of Holt, Worcestershire, the water-colours bequeathed by her husband, the Rev. J. C. Sale, who died in 1897, have come into the possession of the Department of Prints and Drawings at the Department of Prints and Drawings at the British Museum, and are now on exhibition in King Edward's Galleries. They include two sketches by Turner. "Glacier des Bossons, near Chamonnix," and "A Storm at Venice"; "View on the Dee," "Flocks." "The Vale of Clwyd," "Beeston Castle," and "Stanniage Company." and "Stepping-stones at Bettws-y-Coed," by David Cox; and examples of W. J. Muller, P. de Wint, William Callow, James Holland, and Egron Lundgren, and other wellknown

A start was made last week with the civic survey of Greater London, under the scheme drawn up as a professional war relief measure by certain architectural and kindred bodies, and approved by the Govern-ment Committee. Several men have been employed on the work already, and a further number of the 150 eligible in London took up their duties on Monday. Greater London, South Lancashire, and South Yorkshire were the three areas mentioned by the Government Committee in making a preliminary grant of £1,000 at the end of June, and a beginning will be made as soon as possible in Manchester, Liverpool, Leeds, Sheffield, and other places in those areas. Mr. H. V. Lanchester and his co-directors for the different areas have just completed the general details of the survey programme. The maps and diagrams which are to record in the most accessible manner the entire life and interests of the communities will be grouped in seven sections, and considerable ingenuity has been necessary in scheming the colours which are to show at a glance the physical vital, density, recreative, industrial, traffic, and housing characteristics of the areas. The seven groups referred to cover physical features, mortality, population, public and private recreative opportunities, classification of industrial, residential, and transport occupations within the areas, traffic and relative areas of streets, buildings, and open spaces. The hon, directors for the three areas are:— Greater London, Mr. A. R. Jemmett, F.R.I.B.A.; South Lancashire, Professor Abercrombie, A.R.I.B.A. (Liverpool University); South Yorkshire, Mr. H. S. Chorley, F.R.I.B.A. (Leeds).

In an address at the recent annual meeting of the American Federation of Arts in Washington, Mr. Charles R. Ashbee, M.A., F.R.I.B.A., speaking as an English architect and art worker, deplored the effect of the war on British industrial art. He said that just before the war he had worked out a plan by which a labourer's cottage could be designed and built for a thousand dollars, just the amount that it costs to fire a 16-in. gun. Now no cottages are built and millions of money are shot away on the battlefields. Mr. Ashbee's workshops are all closed, three of his workers are at the front, a fourth is drilling cavalry, another is learning to drop bombs from an aeroplane, and another, "the best enameller in England," is making cartridges.

A conterence was held on Tuesday in last week at King's College, when several Belgian experts expressed their views upon the future reconstruction of their country. The chair was occupied by M. Borbonx, Secretary and member of the Belgian Chamber of Repre-Dr. Horta, architect and director of the Ecole des Beanx Arts, Brussels, stated that in the work of reconstruction in Belgium there would be needed a small number of expert directors. It would be necessary to study the character of Belgium and the Belgians in all their perfections and imperfections. He suggested that a committee of the burgomasters should be called to enable re-building to be undertaken, not from senti mental grounds, but from the practical stand point of supplying in the best manner posculture. He also proposed that besides the highways for commerce, new roads should be built near the railway lines for the use of the various works. With the outbreak of sible the needs of modern industries and agri-

motors. Town-planning should be stidied, but its theories should be put into practice with the utmost discretion. Mrs. H. D. Aelaud, hon, secretary of the Belgian Belgian and the state of patriation Committee, urged that our national duty to Ledgium would not cease with the departure of our Belgian refugees.

Mr. P. J. Sheldon, the county surveyor of Essex, in his annual report, states that main roads, exclusive of those under contract with urban authorities, cost for upkeep and in-provements £115,472. A principal item was tar-painting, 3,511,523 super. yds. having been treated at an average cost of 1\(^2\_34\), per vard. The year's expenditure was consider ably less than the estimate, owing to the difficulty, through the war, of obtaining granite, but the result had been that the general condition of main roads had distinctly lowered, and this, he feared, would scriously affect the roads for some time to come. No ordinary road crusts could stand the strain imposed by the exceptionally heavy vehicles now in use during such a winter as the past one, and the sooner this was recognised the hetter, and more stringent regulations made as to the weights that might traverse the highways. Owing to the war it had been possible to spend only £108,810 of the auticipated amount of £173,920 under the scheme of resurfacing to cost £576,890 in five years.

Stability of Masonry," by Ernest H. Sprague, A.M.I.C.E. (London, Scott Greenwood and Son, 8, Broadway, E.C., 4s.), is a useful manual of earth and water pressure on walls and other structures, both from the graphical and mathematical points of view Prominence is naturally given to the former. The volume is based on lectures given by the author at University College and the West minster Technical Institute, and includes ninety-two illustrations and three folding

The energetic campaign for the extension of the lumber export trade of British Columbia has directed attention to the timber resources of the province, their present development and prospects. In an interview, the Hon. W. R. Ross, Minister of Lands, said that because they needed reliable information in order to manage their forests intelligently he began a forest survey in 1912. and a very considerable area had already been covered. The figures obtained gave something definite to go upon. Besides the eight and one-third million acres under timber license, a million acres under old timber leases, a million acres of deeded timberland, threequarters of a million acres held under railway grants, the Crown timber reserve, created in 1907, was very considerable. In the coast forests a solid third was Donglas fir, which was the finest all-round wood in the world; over one-fifth was cedar, and there was an immense stand of Western homlock. The world was now beginning to realise what Western hemlock was. Our pulp and paper mills had gone great things with it already but the hig uses of this wood were only just beginning. The development of the lumber hus ness was just a matter of transportation The Province had developed a fine system of rallway transportation inland; so far, they had not done the same seawards. If the lack of sea-going tonnage that was stifling the export lumber trade were supplied, there would follow an expansion in the lumbering lusiness and activity in every form of

After charging dehenture stock interest and sinking final, transferring £40,000 to general depreciation reserve account and £2,000 to barge and rolling stock depreciation account, the net profit of the Ratish Portland Cement Manufacturers. Limited, for the year to April 30 last amounts to £146.375. A dividend of 5 per cent is recommended on the ordinary of 5 per cent is recommended on the ordinary shares for the year, against 7 per cent, for the previous year, while the "carry forward" is £70.767, against £64.322 brought in. A year ago £40.000 was allocated to general depreciation, and £11.755 written off pre-liminary expenses. The year under review, embracing more months of the war, opened with a normal demand for Portland cement and a reduction in manufacturing costs re-

ARCHEOLOGISTS AND THE RESTOR ATHOX OF DEERHURST CHURCH. To annual meeting of the Bristo and G. Goster annual inceting of the Bristo and G. Froster shire Archaeological Society was held at the Guildhall. Gloucester, on Alednosday, the president, Mr. C. E. Keyser, F.S.A., being a the chair. The hon, secretary, Mr. A. E. Hierry, read the report, which stated that certain archaeological discoveries had been made at Bristol and Shirehompton. The report model the rellaminary for the content of the c port made the following reference to Deerhurst Church, near Tewkesbiny. "In 8-ptember last the yiear and churchwardens of Deerhursh Church obtained a faculty author, sing the rebuilding of the apse and the consequent alteration of the 16th century pews on north, east, and sides of the communion table, In view of the fact that the church is one of the very few left in which this arrangement of pews has been allowed to remain. strong protests were raised by members of the society and others against the proposed alterations

BRISTOL SOCIETY OF ANTIQUARIES. The second excursion of the season, under the auspices of this society, took place in Saturday, the 17th inst., when a visit was paid to Banwell Parish Church and the ancient camps and Bone Caves in the vicinity. At the church, the Rev. C. S. Taylor acted as guide. Mr. Taylor stated that it was agreed that a church stood upon the site since 885. The chancel screen, a masterpiece in woodcarving, with elaborate fan tracery, was erected in 1520, and the old register records that £700 was paid to the carver. Attention was directed to the fine timbered roof, with its stained plaster panels to represent word. The stone pulpit, with its delicate tracery, supported on a slender octagon stone pillar, is an item of note. Above hangs a ornamented oak sounding board, erected in the reign of James 1.

SOMERSET ARCH\_EOLOGICAL SOCI-ETY.— This society held its staty seventh annual meeting at Tanuton on Tuesday in last week. Mr. A. F. Somerville, who pre-sided, said that there had been no excursions during the property of the property The during the year owing to the war, council's annual report, presented by Mr that the membership was 9.5, a decrease of nineteen, the first since the new century began. There were twenty five new members, but losses by death had been heavy, and the way had caused some resignations. The definit but losses by death had been heavy, was had caveed some resignations. It on the general account was £124. It been no falling off in the acous museum specimens, and much with had been accomplished. He is to receive an address recording appreciation of his services, and their appointed consulting erganer at a salary of £250 a year. Mr. Matt Duct, who has been assistant manager for twive and a half years, is premeted manager at a commencer stary of £420.

at a commence of salary of £450.

The final receiving of the present season of the St. Panule Electricological Society took phase on Salarday, when a visit was read to the Greek Church of St. Sophia, Moscow Road Bayswarde, W. under the guidance of Mr. T. Costa by permission of the Rev. the Great Arch mandride C. Pagonia. The party was afterwards conducted over the "Chapillof the Asconsion." Bayswater Road, built for the late Mrs. Hamplen Gutney and decorated with frescors by the late Mr. T. Wentworth Shields.

As the result of a motor accident in Sandling Read, Maid-tone, the borough surveyor (Mr. T. F. Bunting) was last week confined to his bed for some days, but is now about again.

The Bishop Auckland Urban Council is making application to the Local Government Board to borrow money in connection with the sewer age scheme, which is costing, complete, £28,000.

Mr. Alexander McDonald Cobban, inspector to the Winterton Urban D.strict Council, has been appointed surveyor and inspector to the Brumby and Fredungham Urlan District Coun-

The resignations of Mr. Brecken, waterworks engineer. Mr. D. B. McLay, assistant engineer on construction; and Mr. R. M. Grancey, bridge engineer, have been accepted by the city consult of Vancouver, the resignations to take effect on July 31. It is understood that the city has not sufficient work in hand to keep the engineering staff employed.

The contract for the second addition to No. 1 elevator of the Montreal Harbour Commissioners has been let to the Geo. A. Fuller Company, Limited, Montreal. The piling contract is now being earried out by the Peter Lyall and Sons Construction Company, Limited, Montreal. The plans were drawn up by the John S. Metcali Company, Limited, Montreal. This is one of the largest contracts given out this means in the city. this season in the city.

The new town hall at Wallasea is rapidly The new town hall at Wallasea is rapidly assuming more imposing proportions now that the tower has been commenced, and the river perspective is being improved by the excavation of the high ground leading up from the promenade, and preparations for the formation of a series of steps and glass terraces on the slope. The architects of the town hall are Mossrs, Briggs, Wolstenholme, and Thornely, of Liverpead, whose designs and plans, selected in connection, were illustrated in our issue of competition, were illustrated in our issue of  $M_{\rm SM}$  =6, 1915.

A special meeting of Inverness Town Council has been held to appoint a burgh surveyor in specession to Mr. Scott, who received an appearance in the Port of Trinidad. There were hityen, the applicants for the vacancy, and a leet of seven was drawn up. A vote took place between the names of Mr. Alexander F. Mackenzie, architect, Inverness, and Mr. Smith, Engineers' Office, Highland Railway. Mr. Mackenzie was appointed by fourteen votes to five. The new burgh surveyor, who is a native of the verness, has had considerable experience in his profession as an architect, and was for some time a member of the town council. For the past few years he has been on the staff of the Lands Valuation Department, and carried out the valuation in the Island of Lewis.

In order to afford a water supply to houses A special meeting of Inverness Town Council

In order to afford a water supply to houses about to be creeted in Woolwich by H.M. Office of Works, the Metropolitan Water Board have authorised the Works and Stores Committee to incur expenditure not exceeding £900 in connection with the re-laying of about 1,400 yards of 8-in, main in Well Hall Road. 1,400 yards of 8-in, main in Well Hall Road, Kent district, and that the work be carried out under the board's annual contracts under the direction of their chief engineer. An extension of main to the districts of 1de Hill and Goathurst Common. Sevenoaks Rural District, was approved, subject to execution of guarantee agreement by Sevenoaks Rural District Council. The work will be carried out by the board's pipe-daying contractors at a cost of cm. The work will be carried out by the board's pipe-laying contractors at a cost of £1.964. The board also agreed to the laying of about 1.050 yards of 12 in main in Willesden Lane from Edward Road to Coronation. Road, for the purpose of improving the supply

den Lane frem Edward Road to Coronation Road, for the purpose of improving the supply.

The Surrey County Council recently purchased three pieces of land from the Metropelatan Water Board for the widening of Postsin art is for improving the junction of Thornfill Road with the Portsmouth Road at the point in question. The improvements have been carried out at the joint cost of the county council and the Esher and Dattons Urban District Councils. When the improvement has been completed the Water Board will be off with a piece of land containing 185 square yards or thereabouts, beneath which two 5¢ in, mritis pass. The land cannot be in the form a receptacle for rubbish and be an unsignity feature when seen from the aljoining highways. The Esher Urban Destrict Council have no warranged with the Water Board to take the land on lease at a nomical rent and to plant it with ornamental shrubs and lay out grass, and generally keep it up as a public garden, they paying a merely nominal rent of 10s a year. The arrangement will be carried into effect under the Open Spaces Act, 1906.

BEAULIEU, CO. LOUTH. DOORWAY IN HALL From "Georgian Mancions in Ir I and

the express purpose of collating an authentic and copiously illustrated record of the best Georgian domestic work in Dublin. At the outset little idea was entertained of attempting a survey of the country houses of Ireland, mainly built though they were during this epoch. There was no intention either of covering the ground occupied by the historic decorative work of the Hamoverian period in other parts of the country.

Indicate a half-impression provated among the organisers of this special scheme, when it was decided to devote their fifth book to Irish country houses, that the analysis included in the ariginal survey houses included in the ariginal survey instituted by the society. The editors were mable to cope with such a number of buildings, consequently their few of the typical Georgian houses left

untouched by the committee. Domestic buildings of secondary importance are frequently much more suggestive than grander structures, and therefore this new, acter and merits the space given to its book will be welcomed.

Some of the buildings previously dealt with, as above stated, should here be enumerated, or it might appear that the author had overlooked the richest Georgian examples in Ireland when richest arranging their material for the work just published in Dublin. The society having given these big places, there was no occasion for illustrating them again. The first to be named is the palatial seat of Castletown, near Celbridge, Co. Kildare, being the earliest stone-built residence in the Classic style erected in Ireland. The buildings comprise a four-square central block with lateral wings connected by segmentally planned colonnades. The composition presents a refined monu-

the Mid-Victorian period, when new windows were inserted, but the house still well retains its 18th Century charillustration as a leading example of its time. The ornate saloon, with its somewhat pretentious organ case, suggests the effect of over-elaboration, and is lacking in dignity. Newbury Hall, in the same county, is particularly interesting because of its construction in red brick. The arrangement of the plan consists of big wings with intermediate buildings joining them up to the central or crowning block. Powerscourt House, Co. Wicklow, and Castletown, in Kilkenny, are likewise amply illustrated. The last-named is singularly fine, comprising a middle composition of the typical Late Renaissance kind with arcaded verandahs terminating

most part they are very characteristic, and are still rich in good paintings and plate, often containing exceedingly good 18th Century workaday furni-ture as distinguished from show pieces, for the cabinet work of Ireland is marked by much excellent style of its own. Old Irish furniture is distinctive, mostly wellfinished, and it will bear comparison with English contemporary productions. This supplementary but otherwise complete volume, though primarily intended to be a context to those which the Georgian Society brought out, will be valued for its own sake, quite apart from their five former books. In size, style, and binding the work is uniform with them. authors, Messrs. Thomas U. Sadleir, M.A., M.R.I.A., and Page L. Dickinson, M.R.I.A.I., acknowledge in their preface in tall, opulent-looking pavilions having ogee-shaped roofs. Much suggestive detail C.V.O., the Provost of Trinity College,

CASHEL PALACE, TIPPERARY: CARVING ON STAIRCASE. From "Georgian Mansions in Ireland,"

mental extensive façade in the Italian abounds, and the excellent doorways of manner. The "Long Gallery," common elegant proportions add to its charm, The to earlier mansions, is more than 100 ft. house was built between 1767 and 1770 in extent, and a lordly feature is made of the "Grand Hall," besides which there is a very spacious staircase hall in keeping with the rest. No plans of the building are furnished, and this absence of plans materially reduces the architectural value of all these publications of the Georgian Society. Russborough Court, in County Wicklow, has a similar lay-out, extending, however, to greater magnificence, being 700 ft. long, measuring out to out. All the elevations are faced with wrought stone, and the design is attributed to Bindon and Castle, well-known architects of their day. The estate is hard by Blessington. The mansion has a beautiful saloon, and is remarkable for the great variety of its mantel-pieces. Summerhill, Co. Meath, is of a similar type, quite as important in scale, and well worthy of its architect. Richard Castle, who commenced its erection in 1731. The proportions are more lofty than usual, making an exceptionally fine building. Some eight years later the same architect was engaged by the Duke of Leinster to recast his pre-Georgian mansion Carton, his famous seat near Maynooth, Co. Kildare, Further alterations were made to this place during

from plans by David Ducart, the archi-The Marino, Co. Dublin, supplies the only measured plan included in this Volume V., published by the Georgian Society. In their previous books restricted to Dublin, more plans are provided, the most important being those printed in Volume IV. of Leinster House, accompanied by sections to scale nicely drawn and reproduced.

The Georgian town residences in Dublin no longer remain in the occupation of the rich, for whom they were built, while in some streets only their shells stand intact. In the majority of instances these long-neglected mansions are used for housing the distressed poor. About the better parts of the city similar sometime opulent residences are utilised by institutions, or have been converted into hotels or adapted to office requirements. The country houses of Ireland, on the contrary, have been more fortunate, being very largely maintained in their original status notwithstanding "Castle-Rack-rent" stages and various ruination difficulties incidental to their chequered his-

Dublin, for his sympathetic co-operation as President of the Georgian Society in furthering the production of this publication, for which they alone are responsible. The volume cannot fail to be recognised as a standard work on the subject. Mr. Dickinson served as joint hon. secretary of the society, and consequently had the whole business before him. His partner, in his professional practice, Mr. R. Caulieild Orpen, R.H.A., has lent a hand by contributing some cleverly-free pen-and-ink sketches, interspersed in the text, and more marginal illustrations are added by Messrs. L. Giron and J. Haughton. Mr. Milford Lewis, the wellknown architectural photographer, of Dublin, who supplied most of the views and details of ceilings and other decorations for the illustrations issued by the Georgian Society, has been also retained for the same work in this book, besides executing all the copper engravings from his own photographs. We have been per-mitted to reproduce those given by the Dublin University Press, the printers of the whole series in question. The book contains eighty full-size plates, besides twenty smaller drawings in the letterpress. The buildings represented are tory. These historic homes do not always Abbey Leix. Beaulieu, Bessborough, possess many valuable curios, but for the Caledon, Cashel Palace, Castle Ward,

Curraghmore, Desart Court, Furness, Palatten Hall, Turvey, Belgard, Castle Upton, and Heywood. The last-named Upton, and Heywood. house possesses an exceptionally handsome Georgian punch bowl used by the notorious "Hell Fire Club." The cup was made in London by Anthony Nelme and bears the Hall-mark of 1700. It is illustrated to a good scale. Some drawings by Robert Adam are also reproduced in the final pages of the volume.

Our inset plate to-day comprises the entrance front of Beaulieu and an interior of the hall, from which an heraldic carving is shown in detail. We add here a pair of doorways in this apartment for the sake of their elegant enrichments. From Cashel Palace the hall is photographed, and added to this there is a smaller illustration of the carving on the string of the staircase landing. I rior to printing particulars of the subjects depicted in their book, the authors have devoted a chapter to an informative essay on the "Development of Georgian Architecture and Its Application to Irish Requirements."
When these 18th Century dwellings were built, English architects were very often imported to design and carry out their execution. No genuine Tudor-dated mansion exists in the whole of Ireland. and the only exception of that period is furnished by the house of the Ormonders at Garrick-on-Suir, while very few houses are to be found which can rightly be called Jacobean. Irish fortified castles, still very numerous, were long retained for use after the English had abandoned the erection of that earlier class of buildings altogether.

Beaulieu, in Co. Louth, lies between Drogheda and the sea-shore. The house is reckoned the earliest of its kind erected in Ireland carried out in stone, with redbrick dressings, the bricks being of Dutch manufacture. The bold eaves and dormers bespeak the Caroline period, to which the property belongs. The hall is an exceptionally good one for such a residence, rising as it does through two stories. is the more notable for the admirable Early 18th Century pierced wood carvings, which we have previously mentioned. The door cases have bold, deep architraves of the style of the last quarter of the seventeenth century, and some of the ceilings much resemble Jacobean plaster work. The staircase is a capital Mid-Georgian example. The Tichborne family was long associated with Beaulieu. and the great treasure shown to visitors is the famous portrait by Sir Joshua Reynolds of Lord Rokeley, Archbishop of Armagh, of whom Sir Joshua painted five portraits. The charm of Beaulieu is its well-balanced dignity and unpretentious, homely look, though, strictly speaking, the Georgian style in Ireland was exotic, being the architecture of an English garrison; but, all the same, some of these houses are so Irish in character as to wear almost a foreign appearance to

English eyes. Cashel Palace, in Tipperary, has for long been occupied as the Episcopal home of the holder of the Protestant See. The house is hard by the famous Rock of Cashel, where King Donal Mor O'Brien built his great cathedral in 1169 and fitted it in between the Round Tower and Cormac's Chapel, both of which buildings were already in possession of the Rock. The noble chapel, "that perfect flower of Irish architecture," like the earliest churches of Ireland, had its orientation the festival of Beltane on May 1. The orientation of Cashel Cathedral, now long since in rmins, was taken from the sun's and Gibls. 1915. Dublin. £11s. net. fixed by the position of the rising sun on

point of rising on the feast of St. Patri V. the delication saint, May 17, and in thes was King Donal ingeniously worked in his building and dovis I a regulated orienta-tion. Cashel Pala: is a commodious two storied building curried out in red break with limestone dressings. Much of its homely character and style is due to it. range of dormers. The roomy hall is panelled in red pine and has bold Corin thian columns, as so if in the illustration. The staircase occupies a hall of its own and typifies its Early Georgian origin, worked out richly with twisted balusters. The bedrooms preserve their original windows ats and broken architraves to the doorways, while the mantels differ in their detail, a l dating about the year 1810. The mansion itself was erected in 1750 by Dr. Theophilus Bolt in when he was Archbishop of Cashel. Of the remainder of the houses so well represented in this book, we have only space to mertion Caledon, a white building distinguished by decerative finish of a high class inside. Curraghmore, Co. Waterford, occupies a splendid position in the delightful valley of the Suir. Ranking as it does among the best in Ireland, it is so genuinely Georgian that the building on the garden side might easily be mustaken for some English country seat. The kernel of its structure is a modernised castle belonging to the class of medieval strongholds built by the Barons. This has been faced up in its towering form after the manner akin to the François Premier or French Renaissance, rising between much lower flanking buildings to the front sides, and these wings represent the stern pure Georgian type of the strictest simplicity. The ceilings and handsome chimney-pieces form perhaps the chief architectural merit of Curraghmore. Desart Court, built in blue limestone, has bold terraces and stately gardens disposed in a handsome fashion, worthy of this ducal home. Lord Desart owns some very fine cabinets and other choice old furniture. There is a noble staircase in the house, quite worthy of its

Florence Court, likewise freely photographed in this volume, is palatial in scale, with wide and areaded wings in accord with so splendid a mansion. It is the finest Mid-Georgian place in Ulster, and is chiefly remarkable for its extraordinarily free and fanciful plaster ornamentation, said to be French. Some claim this work as that of native craftsmen, which is probably correct, because there was a local school of clever plasterers at Waterford well known for their skill in following the style perfected by the Brothers Adam. Furness is comparatively modest in size, but is distinguished by special points of its own. Platten Hall represents a type much imitated nowadays by English and Scottish architects when affecting the mann-risms of the less pompous form of the "Late Renaissance. The dining-room, here so well shown, is specially admirable, true to style and holdly panelled in oak, with a refined white and grey ucuble chimney-piece; the whole apartment being adaptable as it stands to present-day taste. The book scenes to present-day taste. The book contains a few contemporary and ther portraits, including Remney's exquestic printing of Lady Arabella Ward at Castle Ward, the seat of Viscount Banger \* ---

At Lowesteft in inquiry was held in Thursday before Mr. H. Shalford Bidwell, respecting an application by the corporation to the Local Government Board for leave to borrow £7,500 for works of sea defence.

PAINTERS Sections ARCHI 1048 WAR L. L. EXHIBITION

The I was II. at Indistrict and the pursuit of pursuit of the angle of the Artist's extreme and and statisment who constructed being a simple of the angle of the pastels, and discussed in the appastels, and discussed in the artists of the arti passes, and a constraint which are to be a set of the mecessite is an ests and so the private view too, place on the day, when Princess Least, artist of no mean capacity, given most feelingly constraints. most feelingly charged to be a linear feeling to be a linear Institute of British Arch + is the tion being displayed there and a joining Maddex Street Galaces the purpose by the Institute mission has been adepted in the hope that many will avail themselves of viewing to works of art thus generously exhibited to, the benefit of the charitable tunds of the professions concerned, the Reyal Institutof British Architects and the Imperial Arts League having co-operate I with this end. The exhibition will be open for several weeks, and the prices quoter aras a rule, very moderate, so that all those who are in a position to buy may secure some really good bargains as will as assist the deserving art workers who are so sorely in need. Remembering the many equally laudable and spontaneous Remembering the displays that have been and are being held all over the country for war funds and in aid of different classes of sufferers, it must

Not a few painters and architects well known for their skill and facility with the pencil, pen, and brush are conspicuous 'v their absence, but this perhaps may be readily accounted for by their not having been personally applied to purched, we are aware that this was partly the case, but the oversight possibly was quite uninter tional. The result is none the less to regretted whatever the cause, seeing the some of our best men are not represented. The collection on the whole, nevertheless, is highly creditable, and certainly livers in interest, even if the impression at first sight is that many of the exhibits and its to the work of post days. There may indeed, be critics who will urgether the tile collection includes too mary stagers." but after all viry few sket hes and drawings in the section on the section on the section to the section to the section of the section 118.

be admitted that the exhibition is a re-

markably good one, thoroughly represen-

tative in character, and fraught with an

individual interest of its own,

great gallety is deviced losing pictures. In the cludes severally Royal V. others well kn with free Files of a catalogue, our first in teachers will kn with free Files of a standard number of the Change of the Change of Mr. A. K. Brown, R.S.A. with a row of cotters' that the homes beyind a cornfield and reasons in the first management. field, and reapers in the foreground, all excellently rendered. Next to this is a pastel, by Mr. John Charlton, of a very friendly-looking seated lion by the side

and their varying moods. Miss Eva Roos (Mrs. 8, II. Vedder) is rich in the colour-scheme of her Strohi wedding-party before the velandah of a stone-built Oriental temple. Its warmth is a good fell to the next adjoining seascape in moonlight, by Mrs. Mrs. Medden when wedder in Mr. Alex. Maclean, whose work is one of the pleasantest in the room. There is a tack of brilliance in Mr. Harold Speed's smaller study (No. 12) of "A Capri Bay." with the dead, deep waters of the rock sound paid devoid of all reflection of the shore. One of the largest, if not the biggest exhibit is "The Storm: Its Burst of Passion Spent," given by Mr. A. Carruthers Gould, and showing a village among the hills illumined by a rainbow effect broadly handled in an impressionist way, with water-logged flats in the front of the picture, distraught as it is by the elements, tellingly painted in a making a handsome gallery picture. oils.

Mr. Frank Calderon, with his modest "Shelter," adds a foil to this storm scene by showing a ploughman and two tired horses enjoying refuge under the trees during a passing shower, so meely and capably depicted. Mr. David Murray, R.A. is the generous contributor of "In the Heart of the Highlands," a fine the Heart of the Highlands," a fine example of his masterly skill, and Mr. Arthur Hacker, R.A. shows an oil sketch of a brown field, group of trees, and a woman at work, called "Hoeing," Sir Ernest A. Waterlow, A.R.A., graces the row of poplars in front and farmstead to the rear alongside of the stack-yard. The whole thing is delightful, almost like a Constable in its manner and tone. "Fountains Hall from the Gardens" is not an architectural sub-ject as here rendered in Mr. John Lavery's dashingly done and highly capable impressionist study of the flowerbeds, terraced lawn, cut yews, and topiary work. Architects would never recognise the great Jacobean mansion near the Cistercian's Abbey rains from this picture. as the house serves merely as a foil to the graphic confusion of flowers and foliage, which at a distance looks wonderfully real in this offhand clash of colour brains, as Sir Joshua said, being max d with the paint.

Very different to the last-named is the "Moorland Pasture" sent by Mr. J. Courts Michie, A.R.S.A., a lovely-toned big sky son, well mellowed by time, miles the spen country, where two oxen and a woman give a personal in-rest "Loch Shiel" is another Sotch mosa, suggesting a more rmy effect in water colour, with some sters, learnest also looking thoroughly keeping, by Mr. A. K. Brown, R.S.A., s., s. with needs in introduction here. The effect of the Disgrape. "Its leaving we want the star thing in an oil sub-I in the pister's cap is lovely in tone, I very wide the D is enrious to note the last named landscape that the cow put in vermillen or nearly so, and yet looks quite right owing to Mr. Browne's ich and sonse of values. The blue the recolorizated by at Canadale Bay, by the traditional day at Canadials Boy, by the series printer, as most cap rivating adose, so a bag landscape of Windsor astless, a time members at Eton Wick.

Mr. Herbert J. Snell A vast exclusive if Say merges in a long, dark line on the headson. A The Allegory, by Mr. I have J. Solomen, R.A., is decorative, and the Granting Sea. the first breezily by Mr. Licel F. A R A is figured by a boy and the last named. "Sculling," by Mr. H.

of his to calbent spouse, both strongly woman, suggesting a story which entities arrawn with a close knowledge of big cats the gallery. "The Ice Manden," in blues and their varying moods. Miss Eva Roos and cold tints, the work of Mr. T. C. Start Valdorius rich in the colour- Gotch, is beautiful and vastly more than a colour while "Sweet a study of the nude; while "Sweet September" furnishes a truly English pastoral, with the orchard and embowered cottages by the banks of a river. It is thoroughly and artistically painted by Mr. E. W. Watte. The telling ideal of The Eye of the Storm," shown by Mr. Fom Mostyn. is Rembrandt like in breadth, showing the snow-peaks beyond the valley, where the wind-brushed shrubs in the gloaming light up the middle picture beyond the hush under the forest

On the screens, Sir Aston Webb, R.A., has a gateway from Bruges next a circular bastion tower and conical roof with its lantern stage, near by the "Late and Flat pediment over the archway in stone. Two other water-colours, by the Two other water-colours, by the late Alfred Waterhouse, R.A., from Rome and Quimper, are to be welcomed as in evidence of his capacity as a colourist equalled by very few of his contemporaries. Sir Ernest George, A.R.A., shows several of his beautiful etchings, and the most typical of his sketches here seen is that of the great portals of St. Trophine. Arles, drawn with every appreciation of the statuary, the whole being lightly washed, with good results. The timbered front over the fishing-tackle shop in "A Street in Exeter" is another typical sketch by Sir Ernest George. One the smaller gems of the gathering is a pair of storks so eminently characteristic of the late H. Stacy Marks, R.A. (220). also so true in all his renderings of birdlife. Mr. W. Walcot shows several of his masterly etchings of architectural compositions, but his chef d'aurre is a powerfusitions, but his ent a nature is a powerful study of the vast portal of the modern Palace of Justice at Brussels. Mr. Andrew N. Prentice does himself and his subjects justice in "A View in Skye" and "View in Perugia," a pair of pleasing little water-colours. We were much taken with the old square at Semur, France; the brilliant sunshine midst cold colourings in a narrow way at Chatillon, Val d'Aosta, with its arched side entries, as drawn by Mr. E. Guy Dawber. Mr. Ed. Warren sends a deliente pencil skotch of a florid Gothic oriel, · Tha Eckes Fenster, Nurnberg, rightly rendered. Rheims Cathedral is drawn in elevation by Mr. Arnold Mitchell, and dated 1886, and the same architect shows similar big fronts of Lich field and Wells Cathedrals, all carefully and tellingly realised as to their elabora tion of iconography. Mr. Curtis Green is fully represented, and his most telling drawing is the "West Portal, Cre попа, He also supplies a pen sketch of Countains Hall, which gives a very dif ferent impression to the painting, already mentioned, by Mr John Lavery, VRA (24) Mr S. D. Vishead's Kent Farm and Marsh Side, Re-alvers, show no little capacity as a officers, show no fittle capacity as a cuter-colour sketch i, and Mr. Phene Spiers sends "The Ruins of St. Cloud After the Commune." Mr. Buffles Davison's work is on view several Cloud times, but the gem of his series is a small dashed-in ivory coloured seascape. "After George Sheffield," Mr. Alfred Yeates Mr. Herbert Wigglesworth, Mr. Barclay Niven, and Mr. J. Joass send water clears, one and all capital in their own lirection. Amongst the most delightful is "Bromeswell Heath, Suffolk," with

woman, suggesting a story which enriches diffeathcore Statham, looks sadly out of the gallery. "The Ice Maiden," in blues drawing, with little knowledge of boats and the sea resembles a hayheld on a very choppy day.

#### R.I.B.A. EXAMINATIONS. Preliminary.

The Preliumary Examination, qualifying for registration as Probationer R.I.B.A. was held in London, Bristol, and was need in London, Bristof, and Manchester, on June 8 and 9. Of the 80 candidates admitted, 36 were exempted from sitting, and the remaining 44 examined, with the following results:—

Centre. Examined, Passed, Relegated. London ...... Bristol ...... Manchester ... 44 16

164 The concrete shall be placed in its final position before initial set has taken

place.

In the case of beams, pillars, and walls, the thickness of the layers of look concrete shall not exceed three inches before ramm.nb

As soon as possible after mixing, the concrete shall be properly rammed into the moulds in such a manner and under such conditions as will secure a compact mass, without voids and of the greatest possible density for the proportions used.

Steel

165. All metal reinforcement shall be of steel which shall comply with the British Standard Specification for structural steel for bridges and general building construction from time to time in operation.

166. All metal for reinforcement shall be cleaned of all scale, dust and loose rust, improbably before the standard of the stand

mediately before depositing the concrete

167. Butt or scarf webling shall not be employed in any tensile reinforcement.

168. The builder or other person directing the work to be executed shall, for the purpose of due supervision of the construction of the building, furnish the district surveyor with reasonable proof as to the quality of materials to be used in such construction, and shall make any tests which shall be reasonably necessary.

TESTS AND TESTING.

169. If at any time during the construction or within two months after the completion of the reinforced concrete construction it is months after the completion found necessary to test any part of such construction by reason of any sign of weak-ness or faulty work appearing in the con-struction, the builder or other person causing or directing the work to be executed shall make such tests, and, if the tests show the work to be faulty, it shall be reconstructed and reinstated in accordance with these regulations. 170. The total deflection of beams or slabs

freely supported and uniformly loaded and subject to the permissible working stresses not exceed 1-600th of the span the span is twenty times the effective depth, and shall be in proportion for other ratios of

span to depth, and for other conditions of ends and stress and loading. 171. The superimposed test load on any floor, roof, or other structure shall be not more than one and a half times the superimposed load for which such floor, roof, or other structure has been designed. The or other similar member which has been experimposed test load on any beam, slab, or other similar member which has been exposed to frost during the first week of har dening, shall be not less than one and a-half temes the superimposed load for which such floor, root, or other structure has been de-signed. The superimposed test load on any beam, slab, or other similar member which has been exposed to frost during the first week of hardening shall be not less than one and a half times the superimposed load for which such beam, slab, or other member has been designed

172 Loading tests shall not be made until the explry of ninety days from the date of laying the concrete.

#### PART IX.

FORMWORK OR CENTERING.

FORMWORE OF CENTERING.

175 For the purpose of these regulations, the terms "Formwork" or "Centering" shall include all forms, modds, sheeting, shuttering, planks, poles, posts, shores, strats and somitting, these uprights, walling, and all other temporary supports to the concrete during the process of setting.

174 The formwork or centering shall be of such during the policies of setting, and setting of the concrete.

setting of the concrete

and setting of the concrete

178. The vertical strutting shall be main\*ained continuous through the lower stores
to the foundations of toother floors or beams
which are sufficiently set to afford the re-

pillars below such beam or floor slab shall be partially stripped so that the pillars may be examined on all sides.

## PART X.

WORKMANSHIP.

178. All reinforcement shall be placed and maintained in the position shown on the

179. The concreting in any member shall be carried out as continuously as possible.
180. Where work has to be recommenced

on a surface which has hardened, such sur face shall be well hacked, swept clean, thoroughly wetted, and covered with mortar composed of equal volumes of cement and sand.

#### DRY WEATHER.

181. Concrete laid during dry weather shall be protected against too rapid drying. During the first week of hardening it shall be kept damp by means of wet sacking or other methods or by watering daily (Sundays and holidays included).

#### COLD WEATHER.

182. Concrete shall not be laid when the temperature is below 4° Centigrade (39° Fahr.), and shall be protected when neces-

183. Concrete or mortar which has been frozen shall not be used.
184 The concrete or mortar in any beam.

slab, strut, or other similar member which has been exposed to frost during the first week of hardening shall be removed, or such members shall be tested as provided for in regulations 169 to 172.

#### CUTTING. .

185. No cutting for piping or any other purpose shall be done which would reduce the strength of any part of the structure below the standard required by these regulations.

#### STRIPS AND BLOCKS.

186. Blocks or strips of hard wood, coke breeze, or other equally fire-resisting material may be embedded in the concrete and used solely for fixing purposes, provided that—

(a) they do not reduce the strength of ny part of the structure below the anv standard required by these regulations;
(b) the area of such blocks or strips at

any z.ven cross section is not included in the calculated compression area of any beam, slab, pillar, or other constructional member.

#### INLAID MATERIALS.

187. Soft wood or other equally combustible material shall not be embedded in the con-

#### OVERLAID MATERIALS

---

188. Wood or other combustible materials may be placed on or over the surface of the concrete provided that any voids or hollow spaces between the combustible and incom-bustible materials be filled up with materials of an incombustible nature.

New offices are being built for the Great Northern of Ireland Railway Co. at Sheriff and Common Streets, Dublin. The contractor Mr. John Graham, Dromore, co. Down.

The city corporation of Edinburgh has agreed to soll to Messrs. Redpath, Brown, and Co., Limited, an area of 17 acres of land at Gorgie, formerly part of the markets, for the erection of new works and arrisans bouses.

Mr. Robert Forster, divisional road surveyor, Alston, who poined the Westmoreland and Cumberland Yeomanry, has received a commission as second heutenant in the 11th Bittalion of the King's Own Yorkshire Light

At Leyton on Thursday, Mr. A. W. Bright-neire, an inspector under the Local Govern-ment Board, held an inquiry as to the applica-tion from the Urban District Council for sanc-ton to borrow £1.1% for purposes of the electricity under aking.

The foundation stone of the new church which are sufficiently set to afford the required entering state of the new church of St. Margaret, Scotswood, was laid last week structure.

176. All form work or centering shall be removed without shock or vibration.

177.—Before the formwork or centering under any beam or floor slab is removed the design of the new church of St. Margaret, Scotswood, was laid last week or a site at the pureton, of Denton Road and Armstrong Road. The church when completed will provide accommodation for 550 pressure, and will cost £5,500. The architects are Messrs, Hicks and Charlewood, Newcastle-on-Tyne.

### OME AMERICAN METHODS C GAUGING THE FLOW IN SEWERS SOME

In designing new relief or intercepting sewers and sewage treatment works it is becoming a more common practice to gauge the flow of sewage in existing sewers. The measures adopted by a number of cities in sewer gauging were described recently by Engineering and Contracting as discussed before the Boston Society of Civil Engineers.

The Massachusetts State Board of Health uses a comparatively simple and inexpensive type of recording gauge. It is described substantially as follows by Edward Wright, Jr.

The gauge is used mainly for measuring sewage at disposal works where the sewage

passes over a weir, although it has been used in the measurement of stream flow and in the measurement of the flow of trades and wastes where it is possible to install weirs.

The gauge, Fig. 1. consists of a copper float to which a rod and pencil are attached. and a cylindrical drum, which is caused to revolve by an ordinary clock mechanism. The float rod engages in two brackets which The paper are provided with roller bearings. upon which the diagram is indicated wrapped around the drum and held in place by pins at the top and bottom and by rubber The elevation of the starting point in relation to the crest of the weir is obtained by means of a hook gauge. The actual head on the weir is indicated.

The moving parts of the gauge are constructed of brass, and while corrosion starts in very rapidly, the gauge is so constructed that little or no difficulty ensues from this cause in its operation. The clock is so constructed as to run seven or eight days, and except when weather conditions interfere, the gauge will run without attention for this

length of time.

Owing to the great amount of moisture which at times rises from the sewage in the tanks where the edge has been used, it has been found impossible to produce a pen-and-

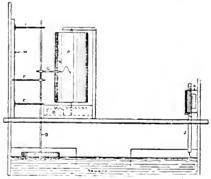

Fig. 1.—Automatic gauge used by Massachusetts Board of Health.

A, Revolving drum covered by paper that receives the record: B, clock: C, float: D, float rod: E, braces for float rod: F, finger, engages slide in upright. H: G, pencil, bears against paper on drum (A; J, hook gauge rod; K, hook gauge block and vernier.

ink diagram, and, in fact, the moisture rising at certain sewage disposal works has been so great that the paper would be torn by the pencil, and to overcome this the very best quality of paper has been used.

The most remarkable feature about this

gauge is that its cost, exclusive of the weir. is only about \$25 or \$30, which includes about \$4 for the clock mechanism.

The gauge is very sensitive and, in fact, the effect of matters rising with gas in the sewage in the measuring tanks under the float has frequently been indicated. Most of the inaccuracy is due to the floating matters in the sewage, which displace the float and tend to

clog the weir.

The flow of the sewage at the sewage disposal works at Marlboro, Mass., is measured by means of a trapezoidal or Cippoletti weir, placed in a channel leading to the sedimentation tanks. The sewage enters the screen chamber through a long cast-iron pipe siphon, passes through a coarse bar screen, and along a channel 7 ft, wide to a trapezoidal werr. The crest of this weir is 2 ft. long and the sides have a batter of 1 in 4.

The crest of the weir is set 18 in, above the floor of the channel. The weir itself is the floor of the channel. The weir itself is made up of 6-in, by  $3\frac{1}{2}$ -in, by  $\frac{1}{2}$ -in, steel angles belted together and set in concrete. The inner edge or crest is planed to a true, sharp edge. The depth of flow over the weir is measured either directly by hook gauge or rule, or by means of a recording gauge of the Bristol type. This description is by Frank A. Marston.

The original plan provided a cast-iron pipe well, with connection to the channel a few feet above the weir, in which the diaphragm was suspended. The recording gauge was fastened to the wall of the screen house. After operating the plant for several months it was found that considerable sludge and scum collected in the diaphragm well and proved to be objectionable, although it may not have had any serious effect on the diaphragm or on the operation of the recording gauge. Because of this collection of scum the diaphragm was removed from the well and was suspended in the channel itself. which arrangement has proved more satisfactory.

The average depth of flow is obtained from the circular chart by the use of a circular planimeter, and the quantity discharged by the trapezoidal weir is computed from the following formula :-

 $Q = 3.366 \ 2.5 \ L \ h^{3/2}$ Q = quantity in cu. ft. per second.

L = length of crest of weir = 2 ft. h = head on crest in feet.

In the design of the plant, the possibility of using a Venturi meter or some other form of measuring apparatus was considered, which would obviate the necessity of constructing an open channel with its attendant difficulties due to the deposition of solid matter, but it was felt that the city would not be justified in going to additional expense for this purpose.

The trapezoidal form of weir was chosen because of the great variation in flow to be measured. During dry weather single daily flows have been recorded as low as 150,000 gallons in twenty-four hours, and during the spring flow has reached as high as 2,300,000 gallons in twenty-four hours for a single day

In studying the operation of the plant, it was found desirable to know the number of doses discharged by the automatic siphon from the dosing tank each day, and to obtain this information Mr. George A. Stacy, the Superintendent, installed another Bristol gauge in the dosing tank. This new gauge has operated in a more satisfactory manner than the other, perhaps partly due to the fact that the diaphragm is immersed in settled sewage. The charts obtained from this new gauge have been satisfactory and of considerable value.

They show the rice and fall of the sewage level in the dosing tank, and are used not only as a check on the quantity of sewage, but especially to determine the quantity applied to the various filter beds.

After about one year's service, a new rubber diaphragm was installed in the screen chamber gauge. The old diaphragm ap-peared to have been attacked by something in the sewage, possibly sulphides. which partially rotted the rubber.

From the beginning of the operation of the recording gauge in the screen chamber, the attendant has kept daily readings of the depth of flow over the weir, measured directly at a point a short distance above the weir. The attendant was instructed to take these measurements at approximately four o'clock each afternoon, and from the data thus obtained it has been possible to check the readings of the recording gauge and to

ably close and furnished a fair chell is the working of the gate. The Marlboar ably close and innesed a forecast the working of the jets. The Marlboursewage sycem is largely on the separate places of hit the variation, without of sewage through the day is quite 10 july for certain average.

The experience with this type of record, gauge at Marlhoro, although somewhat adverse, is not of a sufficiently serious nature to prevent the gauge being used in other places. The experience seems to point out, however, that it is very important that the gange be thoroughly tested at the factor before it is installed, and that every preat the factory cantion be taken to make sure that the tube connecting the diaphragm with the records gange be absolutely air tight. It is also of advantage to have the diaphragm immersed in as nearly clear water as possible, although the gauge has operated successfully in what might be called thick sludge. Apparently septic sewage has some action on the rubber of the diaphragm, requiring its renewal per haps once a year, but this can be easily done by a man of average mechanical ability and should not be a source of serious trouble. Where a slight leak does occur in the pres sure tube or in some other part of the mechanism, it is exceedingly hard to locate and much harder to remedy. On the whole, the records obtained in Marlboro have been very valuable, and experience seems to justify this type of instrument as against a more expensive type, under the conditions at this particular plant.

The engineering department of Newton Mass., maintained sewer gauging apparatus at three of the connections of its samtary sewer system with the metropolitan trunk sewer near the Charles River for a period of about a year during 1992 and 1903. These gauges are described as follows by Edwin H. Rogers:

The gauges were in the form of a weir, with

apparatus to measure the depth of flow, consisting of a float and a connection therefrom which registered the rise and fall of the sewage on a perpendicular revolving drum operated by clockwork. No reduction gear was used, the actual rise and fall being recorded. The drums revolved once a week, requiring the renewal of the record chart every seven days.

The weirs were located in manholes of the samtary sewers, and as their crests were raised from 1 to 2 it. above the invert sewers, they proved more or less of an obstacle to the dis charge of the solid matter in the sewage, retaining a considerable amount of sludge which had to be frequently removed.

Considerable difficulty was experienced in

the maintenance of the clocks, principally on account of the dampness which rusted out the hair-springs in their escapements and also tended to promote the growth of mildew in the works in such quantities as to stop them within a month, even though they were entirely enclosed in brass boxes.

The results obtained were in the main satisfactory, owing principally to the care ex ercised to keep the apparatus in suitable working condition.

In 1906 to 1908 attempts were made by the department to record the flow in three of the main surface drams of its separate sewer system for the purpose of obtaining data relative to the run-off of storm water. In one drain a weir was constructed with automatic registering apparatus, but was a failure owing to the sand and other wash from the streets interfering with the operation of t' anparatus

In another instance a float was install d in a chamber beside the drain and connected with the invert of the drain by an inverted

Owing to the amount of rise and fall of the

fill in the records for the periods that the gauge was out of commission.

A number of daily records were selected as being representative of the variations in flow, and from these a curve was plotted showing approximately the percentage which the four o'clock p.m. rate of flow is of the average for the entire day for varying rates of flow. By means of this curve the average daily flow was estimated, having as a bas's a single measurement made at four o'clock in the afternoon. The results have been reason

(I the manhole, and J the head, The gauges are calibrated by raising the first 0.5 ft. at a time, and noting the value of the movement on the recording device. In is way calabration curves and scales are

When installing a gange, the sewer in which it is to be placed is carefully measured, and plotted showing the value of depths of flow. The gauge is then C 117 C of for all depths of flow. The gauge is then placed in position, the ribbon attached to the float arm and counter-weight, a blank record placed on the drum and the pen inked record placed on the drum and the pen integrand pressed down on the record ready for recording. The ball float is then placed #5 ft, from the bottom of the sewer, the position of the pen and the elevation of the float ball being recorded on the blank record; the float ball is raised 5.0 ft. more and the new position of the pen and elevation float recorded. This operation is repeated until the float ball has reached the inner top of the The elevations are then corrected for the depth of water required to float the ball By comparing this record with the Q curve a scale is made so that it will give the value el Q for any position of the pen on the record. The height of a flood wave is shown on a

well sanded vertical flood stick by the sand being washed off as high as the water rises. This gives a very sharp line for the height of the wave, and is of advantage in determin-

ing the slone.

The use of the weir is well illustrated by a concrete example; one of our problems was to determine the infiltration and the maximum and minimum flow of sewage for a large disthe population of which was about

To obtain the desired information a weir was used, and the flow automatically gauged during the entire day and night for each day

of the week.

The weir used was located in the outfall sewer, or outlet flume, and belonged to the sharp-crested type, with end contractions suppressed. The crest length measured 25.84 ft., and the height 2.17 ft. The head on the crest when not affected by storm or snow eater varied from 362 ft. at 4,30 a.m. on Fr days to 543 ft at 3,05 p.m. on Tuesdays.

The device for recording the heads consisted ci an automatic water stage register placed cer a "basin" jut located just ontside the connel and about 16 ft, up-stream from the weir crest. The jut was connected with the frame by means of a 3-in, iron pipe, 3 ft, reg, and on the noor and perpendicular to the sele of the approaching channel. The zero for the register was letermined by means of a hook gauge and a Y level. The correction to slack motion of the register was deterjoined by the hook gauge to be 2 of 1 per

Bazin's fermula, Q MLD v2GD, for supseed weirs with velocity of approach, was ed to plot the results of the investigation. is suggested, however, that Hamilton oth's formula, Q = 3.29 LH<sup>2</sup>, for weirs of at lengths, may give more accurate results. The total mean flow for twenty-four hours The total mean flow for twenty-four hours as indicated by the gauge records was 1 123,000 gals. The total amount of water singled to the district gauge, according to information received from the Water Department was 17,767,000 gals. The total amount of ground water finfiltration in day was 75,500 gals.

signiz in one way sometimes involves ex short ve gain. The president of a Canadian short we gain. The president of a Canadian structure company states that in one case the mg of concrete by reducing the size of mass on successive floors was \$2.50 per mm. On the other hand, the increase in m case was \$5.70 per column, entailing a of \$7.47 per column. This is a very good mple of why it is cheater to use the same dimensions. One way to avoid frequent (2es it columns sizes is to vary column re-trement in successive stories.

NEW YALCA BUILDINGS, SWANSEA

The new YM.C.A. buildings creeted at Swansea on the site of the old Longlands Hotel, St. Helen's Road, were designed by Mr. Glendinning Moxham, F.R.I.B.A., Swansea. The materials used externally were thin red local bricks and Portland stone. Internally all floors were of steel and coninternally an moors were of steel and con-erete construction. The woodwork was chiefly of selected oak. The plans below the perspective show the ground and first floors of these extensive premises.

SANDSTONES. CAMBERLEY.

This house is now in course of erection for Colonel W. J. C. O'Shaughnessy. It stands amidst pines, on an elevated site adjoining the Camberley Heath Golf Links, commanding extensive views of the surrounding country. Externally the house is being built hand made sand-taced bricks, supplied by Messrs. Thos. Lawrence and Sons, of Brack-nell, with Monk's Park stone to the entrance door and window over, and to the stoep columns and cornice. The roof is to be covered with hand-made sand-faced antique tiles. The woodwork is to be painted white. Internally it is proposed to carry out the main staircase, the panelling in the ball, and the floors of the best rooms in oak. The principal fire-places are being specially made to the architect's designs, based on genuine examples of tire-places of this period, in keepthan Corbett, of Bagshot, is the general contractor, and Mr. H. Reginald Poulter, of Camberley, is the architect. A lodge has already been erected at the drive entrance.

LONDON CITY AND MIDLAND BANK, METROPOLITAN BRANCH, WOLVERHAMPTON,

This building, designed by Messrs, Cossins, Peacock, and Bewlay, of Birmingham, for the Metropolitan Bank before the absorption of that company by the London City and Midland Banking Company, occupies one of the most prominent sites in Wolverhampton. immediately adjoining the Art Gallery. basement and the ground floor are almost entirely given over to banking requirements the two upper floors are arranged for offices for letting purposes. The banking hall walls are panelled in mahogany to a height of 10 ft., and the fittings are carried out in the same material, the floor of public space the same material, the non-dependent photos page 1 being payed with a Siberian green and Breche rose marble. The ceiling, which is divided up by beams supported on columns, is finished in curiched plaster. The exterior the building is executed in Darley Dale

SAXON CRYPT, REPTON CHURCH, DERBYSHIRE.

This water colour sketch has been sent us by Mr. William Swindell, of Derby, in further illustration of this famous crypt fol-William Swindell, of Derby, lowing upon our correspondent's request for drawings on page 654 of our last volume. Mr. Harry Gill, M.S.A., of Nottingham. lent a smaller photographic view and a plan of the crypt, which we gave in our issue for June 16 last, accompanied by several interesting particulars not furnished by our previous contributor. The crypt measures about 13 ft square and the four detached columns are 12½ in, in diameter and nearly 6 ft. 6 in, tall. The sketch shows on the right one of the stype approaches which occur on either hand, forming a communication The stype to the left is with the church now built up, and the vestries occur above. The monument seen in Mr. Swindell's draw ing at the far end has now been removed and we believe stands under the tower at the west end of the maye. We can recall no drawing of this crypt, illustrated elsewhere, in any architectural work. Repton is in the postal district of Burton-on-Trent.

FIRST PREMIATED DESIGN FOR SEVEN COTTAGES AND SHOP, BROMBOROUGH PORT ESTATE, PORT SUNLIGHT.

PORT SUNLIGHT.

This design for these cottages was awarded the first premium by Mr. Geoffrey Lucas, FRI.B.A., the assessor in the competition promoted by Messrs. Lever Bros.,

Ltd., just lately. The following conditions had to be observed: That the cost should not exceed £1,500 for the group. £200 per cottage, and £100 in addition for the shop. The sites were set out 80 ft. deep, and the widths were left to the competitors to decide, with a minimum of 17 ft. The position of the group was to be a corner site.

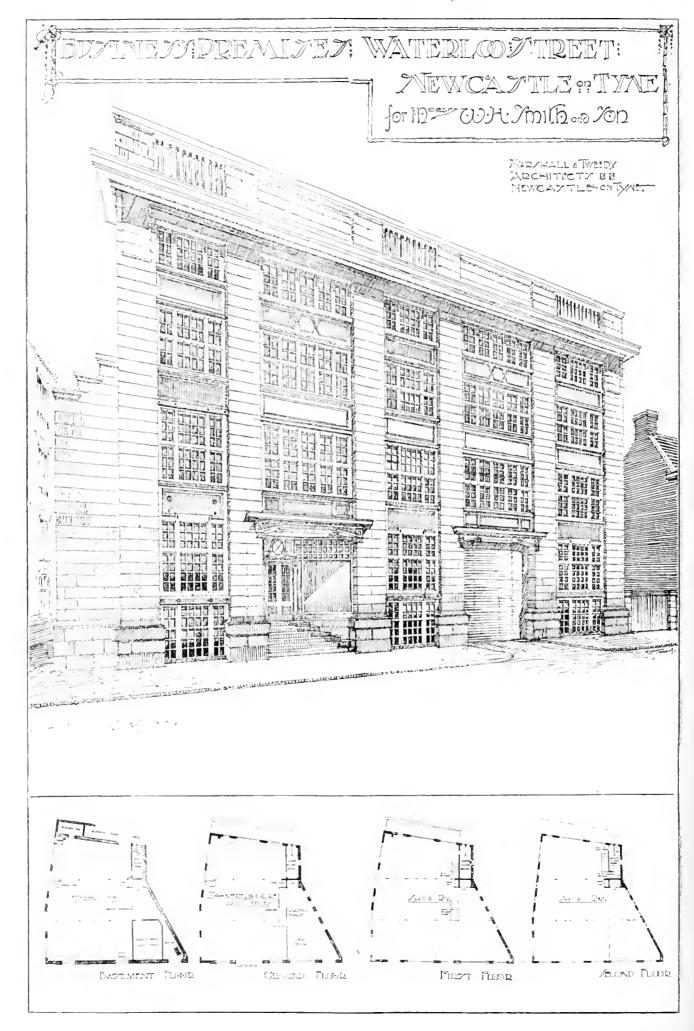

The scheme illustrated shows the treatment suggested for the four corners of two cross roads forming a shopping centre or square. Strict economy in planning was essential, as the living room had to provide an area of not less than 170 sq. ft. and the scullery 100 sq. ft., and the height from floor to floor was to be 9 ft. 9 in. Back yards approached from back roads were to be provided divided by brick walls. The approached from back roads were to be provided, divided by brick walls. The materials to be used externally are rough east over stock brickwork with red facing bricks where shown, sand-faced tiles for the roof covering, and elm boarding in the gables. A plinth of smooth trowelled gables. A plinth of smooth trowelled cement, tarred 2 ft. above ground, runs round the block on three sides. The shop front is suggested for general use, but the front is suggested for general use, but the designs would have to be individually varied in detail according to the various trades to be provided for. The architect is Mr. Ernest G. Theakston, F.R.I.B.A., 36, King Street, London, and Wendover. Bucks.

NFW PREMISES FOR W. H. SMITH AND SON IN WATERLOO STREET, NEW-CASTLE-ON-TYNE.

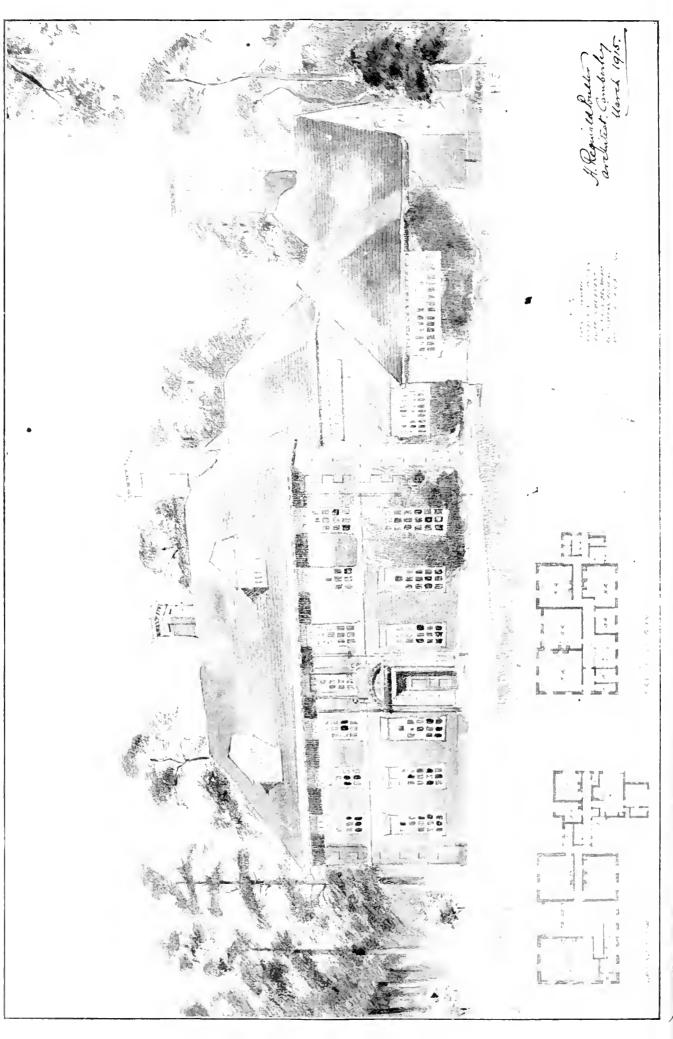

These new premises, which are being erected, will present several new features in warehouse construction. The whole scheme is being carried out under the superintendence of the building and estate department of H. Smith and Son, of which Mr. F. C. Bayliss is the manager, and the architects are Messrs. Marshall and Tweedy, 17, Eldon Square, Newcastle. The front elevation to Waterloo Street will be stone, with iron panels and steel window frames. There are panels and steel window frames. There are two main entrances—one for goods and one for offices and showrooms. The basement is approached by means of a sloping way at back of building, as well as by stairs, lifts, and elevators. The contract for the main structure and foundations has been been been decay. and elevators. The contract for the main structure and foundations has been placed with Mr. Thos. Clements, Newcastle, White glazed bricks will be used in the basement. The floors and staircases will be carried out in ferro-concrete by Messrs. Melwille, Dundas, and Whitson. The steel girders and columns will be provided by Messrs. Redpath, Brown, and Co., of Edin-The steel windows and iron panels will be supplied by the Crittall Manufacturing Co., Braintree. Oak block floors will be carried out by Messrs. Hollis Brothers, Hull. Electric lifts and conveyors are being provided, and everything which will make for the general comfort and convenience of their customers and staff has been embodied, for it is realised that environment itself is an important adjunct to the progress of the individual as well as the business. There will be quite a new feature in the doorway, from which some interesting developments may be The whole scheme has been expected expected the whole scheme has been worked out with the idea of providing increased facilities in every direction for prompt and regular despatch, for which the firm and its Newcastle house are noted. With the further provision of adequate means for warehousing, and dealing with books, stationery, fancy goods, and the many varied classes of stock, the new premises, when completed, will be the embodiment of purpose and of all that is best in an up-to-date wholesale business. By this means Mr. W. II. Manning, the manager, and his staffto whose energy and ability the growth of the lusiness is due—will be able to continue even more effectively the policy of adequate service and satisfaction, on which success so much depends.

The City of London Corporation decided on Thursday to acquire the freehold and leasehold interests in various properties in Cloth Fair at amounts in most cases considerably below those originally asked by the claimants. The Corporation also agreed to purchase for £3,922 the interests of the Vintners Company in Nos. 67 and 68, Leadenhall Street, in connection with the work of widening there in progress.

The ways of the law are wonderful, and especially in the matter of conveyancing. which was supposed to be simplified. The Act of 1881 was intended to make things plain in regard to property. Everything was to be shorter and clearer, and undoubtedly the Act meant well. One of its provisions dealt with the notice to repair which was to be given for breaches of covenant in a lease. Such notice must specify the particular breaches complained of, require them to be remedied, and ask for money compensation It all looked simple enough in the Statute Yet in the case of "Fox (Pauper) v. Jolly the House of Lords has only just decided the legal points in an action which began in June, 1912, so that for three years this very small matter has been hanging about the Law Courts. The notice affected six houses, and dealt with the repairs required under general headings, instead of giving a separate schedule of dilapidations for each house, as the lessee contended was legally necessary. Fortunately, the Law Lords, after long arguments on the authorities, were able to hold that the notice was good, as it told the lessee what he was required to do, and was sufficiently specific in details. They added that it would be very hard if a landlord was, in every case, bound to serve a surveyor's specification of repairs with such a notice. It would greatly increase the cost to the losing party. The decision will become a precedent for future use, as laying it down that the Statute of 1881 does not impose the obligation of drawing out a full and detailed specification to be served with every notice to repair. The House of Lords has once more brought in common sense, but it takes a long time to get there, and three years' litigation is a costly business.

The action reported on another page, by Messrs. Charles Clegg and Son against the Manchester Athenæum authorities, is another instance of the too common disposition of representative bodies and public authorities to penalise architects for their own second thoughts. Nothing could well have been clearer than the original contract made between the Athenæum and their architects. and nothing transpired at the trial to support in the slightest degree the contention of the defendants that the whole scheme was a tentative one, and that when it was abandoned. all they had to pay their architects was  $1\frac{1}{2}$ per cent, on the lowest tender. Mr. Justice Atkins put the whole case in a nutshell, and we congratulate him on the clear and satisfactory terms in which it was phrased. We think he was right in disallowing the charge made for assisting to procure a mortgage. Work of that kind hardly comes within the province of an architect, though, of course. there is no moral objection to his undertaking it. If from any cause he fails, he can hardly expect to be paid. But every other item Messrs Clegg and Son claimed for was perfectly fair and regular, and we have little doubt that, although they have quite rightly succeeded in establishing their claim. an amount of work was done by them which they will never be paid for, which rendered it one of the least profitable jobs they ever undertook to execute.

A joint meeting of the Parks Committee of the Edinburgh Town Council and the Gladstone Memorial Committee was held last week, Lord Provost Inches and Sir M. Mitchell-Thomson, two members of the Glad-

stone Memo a Council a being const. Su James Gather PRSA, another conour of the Memoria. Committee, sent a 2011 on Alexium of the Artificial reported on the S. I.A. on a site not bear good fleet to, he 80 dames would agged that the status to taken to Glasgo v. The Joint Committee first covered two suggested these for the memorial nother East Prince Stoot Gardens. One of these is almost opposite the Royal Hotel at a place on the terraco close to the Adam Brack statue. This site is the one in the East Garden selected by the sculptor, Mr. Pittendrigh Mac2 fliving, and supported by Sir James Guthire, provided that the memo rial is set facing the south, with the back of the statue to Prices Street. This, the sculptor says, is more sarry so as to allow the light from the south to play on his figures The Gladstone memorial on this site would involve the removal of the Adam Black statue mearer the Scott Monument. The other site in East Princes Street Gardens is one near the statue to Professor Wilson Christopher North) a statue which would have to be removed to make way for the newer memorial. In this case the Gladstone Memorial would be set facing west, with one of its sides to the street. The Joint Cem-mittee, it is stated, were ananimously of the view that under to conditions would they grant the Adam Black memorial site unless the Gladstone Memorial faced the street; if the statue was set with its face to the street. the Parks Commuttee have no objections to recommend the Town Council to grant this site. They also agreed that they could recommend the Christopher North s.te, and they approved also of suggesting anew a site in Sanghton Park.

The artistic genus of the French people, wisely cultivated by the action of the Ministry of Art, is a great national asset, and a pathetic instance of its patriotic application, inspired by maternal comradeship, is given by the Paris correspondent of the W for in the course of an interesting parrative of a motor-car tour over some of the buttleneds in France. He says: "On the national highway, a few miles east of Vitry le-Framois, two privates and a sergeant were completing a very artistic meaning at marking the resting-place of sixty-five French soldners killed in the Battle of the Marne. While we talked with the sengeant a touring car appeared at the end of the long white highway. In a tew seconds it had reached the graves, had stopped, been followed by a second car, and the soldiers were standing to attention before General Franchet d'Esperey. After the general and his staff had saluted the fallen heroes, he turned towards the ser geant and congratulated him on his work. I wonder how much this monument will cost me" remarked the General. 'Not a penny, sn.' What' grante column, carved wo d ruings, modallons, tavel, flowers you have done all that for nothing. The sergeant expanied that the grante brock had beer tourd among said wreckage, and was theirs for the cartage, wood was plentful period and flowers and gravel had been give. Thus they had elected a mornment or quiet teste. and yet worthy of the men whose rest ng place it marked, without asking for any fin dfrom the State Treasury."

Fresh regulations for technical schools, schools of art, and other forms of provision of further education in England and Wales came into operation on Monday last, and can now be purchased through any book-seller from Wyman and Sons for 2d. They show the conditions of grant specially applicable to the various schools and classes. There are very few modifications from previous arrangements, one being under even-ing schools. No. 34. D, providing that the Board of Education may pay an instalment of the estimated grant in advance of the final payment. As to the endorsement of certificates, a new rule, No. 59, enacts that ' (a) Examinations upon the courses of study as set out in the syllabuses must be held in each year of the course. These examina-tions must be held by the teachers, with whom must be associated for the examinations in the last year, and if desired, for those in earlier years, an external assessor or assessors. The board may exceptionally approve other arrangements for examining students taking senior part-time courses.

(b) It an advisory body has been established for the school or for any particular course, members of that body should be associated with the teachers and assessors ertificates or diplomas in the award of 65. D. provides that "No addition may be made without the Board's consent to the record upon any endorsed certificate or

As compared with former years there are several alterations in the arrangements. The conditions governing the award of full techno logical certificates to painters' decorators' work, cabinet-making. and binding and embroidery have been modified, and the lists of works of reference have been revised and brought up to date. About eighty subjects are comprised in the About eighty subjects are comprised in the examinations. The programme of 394 pages contains full syllabus of the various subjects, and is published at 9d. net by Mr. John Murray, Albemarle Street, W.

John Murray, Appenance School.

The fifty-eighth annual report of the Trustees of the National Portrait Gallery states that the plans prepared last August by H.M. Office of Works for the muchneeded extension of the gallery have, with minor changes, been accepted. These prominor changes, been accepted. These provide for a single gallery along the Orange Street frontage, practically in a line with the existing building. Some difficulty was experienced in adjusting the floor levels of the proposed new building to those of the present galleries. The trustees were aware equality of floor levels was cardinal principle in the construction of all modern museums, and in accordance with their representations the Office of Works produced new plans, which were examined February, 1915. The number of visitors during 1914 was 119.928, a decrease of 16.503 upon the total of the previous year.

The West Bromwich Town Council dis-cussed on Wednesday the question of the Mayer's Green housing and improvement scheme. On account of the demolition of houses in carrying out a public improve-ment, the Council must, under the Housing of the Working Classes Act, 1903, under-take a housing scheme. The Sanitary Committee reported that the Local Government Board required the erection of houses on a site or sites to be approved by them, and according to plans also to be approved by them. The scheme has to be approved by them. The scheme has to be carried out within twelve months from its approval by the Board, but it was very doubtful whether the Board would require the scheme to be executed within that period. The committee recommended that the be carried out, stating that particulars as and the hemlock, and all four are to be seen, to site, kind of house, and rental would be treated in a variety of ways which serve to

submitted later. An amendment was proposed that the scheme should be postponed until after the war. Mr. Bell said the condition of things in the Mayer's Green area was absolutely a disgrace to the town. Some of the people were living rent free in hovels which should have been demolished years ago. The amendment was lost be votes to 9, and the report was adopted. should have been demolished

The British Vice-Consul at Bangkok (Mr. 11. Fitzmaurice) reports that the bulk of the cement now imported into Siam comes from Denmark and French Indo-China. Recently, however, a firm at Bangsue, near Bangkok, commenced the manufacture of cement, and the annual output of this new works is estimated at 120,000 barrels or 20,000,000 kilogs. (about 44.092,000 lb.), a quantity very nearly equal to the average importation of cement into Bangkok during the last five years. The British Vice-Consul adds that if this local factory is The British able to produce the quantity and quality of cement its promoters expect (as to which some doubt is expressed), and at the same time to compete in price with the cheap cement now imported from French Indo-China, the importation of cement into the cheap Siam may practically cease.

At the meeting on Wednesday of Corporation of Birkenhead Alderman Solly, chairman of the Parliamentary Committee, gave the council some information regarding the town planning schemes for the Oxton, Claughton, and Rock Ferry districts. Those residents who had inquired concerning the scheme had been satisfied with the information given them. Long before the work began a decision was taken to " the districts mentioned for the protection of property, and books of reference were prepared at a cost of £200. If the council had not proceeded with the serving had not proceeded with the serving of notices on owners and residents affected the expenses incurred would have been rendered useless. By town planning the council could settle how many houses should be erected per acre. By serving the notices the districts were protected from any danger of being spoiled and their amenities were preserved.

At the meeting on Thursday of the City Court of Common Council, Mr. Ernest Edward Finch, M.Inst.C.E., M.R.San.Inst., for the past half-dozen years Chief Assistant in the Engineer's Office, was unanimously appointed Chief Engineer of the City at a commencing salary of £800 a year, the appointment to date from Christmas, 1914.

Mr. Finch, formerly Chief Assistant Engineer of Bermondsey, and then Borough Engineer of Pethnal Green for six years, was appointed Chief Assistant in 1909, and since then the Corporation has paid over £800,000 in settlement of compensation claims in connection with the widening of Fleet Street, Bishopsgate, and Leadenhall Street, the work being carried out by the engineer's staff

In his annual report to the City Council of Bristol, Mr. L. S. McKenzie, A.M.I.C.E., states that the number of new houses erected within the civic boundaries during the year is only ninety-eight—the lowest on record, while the number of void houses remains practically the same as the previous year. The small number of new houses is doubt-less largely attributable to the scarcity of labour and the abnormally high price of materials. Nothing definite has been accomplished in the direction of town-planning, but the question of arterial roads has been under consideration.

The fact that the war has shut off the Russian and Baltic wood supplies has turned the attention of timber buyers to the resources of British Columbia in this and the Trade Commissioner of the Canadian and Commerce Department has arranged an exhibition at 87. Union Street, Glasgow, in order that commercial men may have an opportunity of seeing what British Columbia can produce. The principal woods British Columbia has for export are the giant Douglas fir, Columbia spruce, the red cedar,

show the numerous purposes to which the timber of the province may be turned. The natural woods are shown, and also samples of The the timber when it has been dressed, stained, and varnished, and utilised as doors, panels, cornices, etc. The uses of the woods for street paving, barrel-making, and flooring are street paving, barrel-making, and nooring are also demonstrated, and a number of photographs are on view descriptive of the logging operations carried on in the province and the manufacturing and shipping capacity of export mills. The opening of the Panama Caral has reduced the shipping distance from Canal has reduced the shipping distance from British Columbia by about half.

The "Strand Magazine" for August contains a well-illustrated article on "The Value of Observation in War," by Mr. Frederick G. Cooke, M.S.A., of the Eastbonrne Volunteer Training Corps. The paper is substantially the admirably sug-The gestive lecture on the same subject delivered at 9, Conduit Street, W., before the Central London Regiment of Volunteers, and fully reported in our issue of May 14 last. The author demonstrates in some new photographs how by besmirching and mottling his uniform and modifying the stiff outlines of his service cap a sniper may adopt pro-tective coloration when in the field almost as effectual as that of the feathered snipe from whom he derives hints. Mr. Cooke writes us:—"It was through your publishing my address last May that I got into communication with the editor of the 'Strand Magazine."

The Council of the University of Liverpool have just issued the prospectuses of the School of Architecture and Department the School of Architecture and Department of Civic Design for the ensuing session. The School of Architecture is under the charge of Mr. C. H. Reilly, M.A., F.R.I.B.A., the Roscoe Professor, assisted by Mr. L. P. Abercrombie, M.A., A.R. I.B.A., Lecturer in Building Construction, and Mr. L. B. Budden, M.A., A.R.I.B.A., assistant lecturer and student instructor. Mr. Giles Gilbert Scott, F.R.I.B.A., is the Reader in Gilbert Scott, F.R.I.B.A., is the Reader in Ecclesiastical Architecture, and the subject of Greek Art is taken by Professor R. C. Bosanquet, M.A., F.S.A. The autumn term begins on October 5, in the Department of Civic Design. Mr. L. P. Abercrombie is the lecturer, Mr. T. H. Mawson deals with Landscape Design; Mr. J. A. Brodie, the city engineer of Liverpool, and Mr. H. E. L. Martin, B.Sc., with Civil Engineering: Dr. E. W. Hope with Civic Hygiene; and Mr. H. Chaloner Dowdally, B.C.L., an exLord Mayor of the city, with Civic Law. Lord Mayor of the city, with Civic Law. This department, founded in 1909, was the first school in this country exclusively designed to meet the need of students who wish to study town-planning.

### OBITUARY

Quebec has lost a well-known architect in the person of Mr. Rene Lemay, who died at his summer residence at Cape Rouge recently. During his active career Mr. Lemay contributed extensively to Quebec's archi-tecture, and many of the modern edifices which are monuments to the commercial expansion of the ancient capital were planned by him. Among the buildings which he designed are the Merger Building, the designed are the Merger Building, the Dominion Fish and Fruit Building, Quebec Technical School, Caisse d'Economie, St. Roch's, the Lindsay Building, and the new St. Patrick's Church, besides other splendid buildings throughout the province, including Chicoutimi Cathedral. The late Mr. Lemay represented St. John's Ward in the City Conneil for its years and he was a former Council for six years, and he was a former President of the Dominion Association of Architects.

The death took place on Thursday morning of Mr. James Ramsden, builder and decorator, at his residence, The Elms, Walmersley Road, Bury, Lancs. He was a well-known man, and last year was president of the North-Western Master Builders' Federation. Federation.

An isolation hospital is about to be built at Ely at the joint cost of the town and rural districts councils. Mr. S. J. Wearing. A.R.I.B.A., of Norwich, is the architect, and Messrs. Parren and Son, of Earith, Hants, have fallow the have taken the contract at £3,223.

LEGAL INTELLIGENCE.

ARCHITECTS ACTION AGAINST MAN CHESTER ATHEN.EUM. At the Manchester Assizes, on the 20th ult., Mr. Justice Athin, sitting without a jury, began the hearing of an action brought by Messis. Charles Clegg and Son, architects and surveyors, Economic Buildings, M. inchester, against Mr. H. Stafford Golland, hon, secretary of the Manchester Atheneum (sued on behalf of the officers and members of the institution) to recover sums amounting in the aggregate to £721 for work done and services rendered. Mr. Acton and Mr. Jordan appeared for the plaintiffs, and the defendant was represented by Mr. Atkinson, K.C., and Mr. Brocklehurst.—Mr. Acton said there were also associated with the plaintiffs in the action Messis. Hurrell and Taylor, quantity surveyors, Manchester. The Atheneum was an institution in the city, devoted to artistic, literary, and intellectual pursuits. In July, 1912, Mr. Golland consulted the plaintiffs with a view of removing the hall from the top to the ground floor of the building. Messis. Clegg were of opinion that it could be done, and that it would be necessary to prepare plans and take out quantities. The wish of the Atheneum authorities was that they should only have one firm to deal with for the purpose of payment, and Messis. Clegg, therefore, made arrangements with Messis fixed by the Royal Institute of British Architects, and Messis. Clegg prepared sketch plans, Various alterations were suggested by the compicts of the work they would LEGAL INTELLIGENCE. fixed by the Royal Institute of British Architects, and Messys, Clegg prepared sketch plans, Various alterations were suggested by the committee of the Atheneum, and these were made in the sketch plans, which were obviously distinct from working plans. There was a suggestion that the Manchester Corporation should buy the building, but this was not carried out. Amended sketch plans were finally passed by the corporation, and the members of the Atheneum at a meeting resolved to proceed the corporation, and the members of the Atheneum at a meeting resolved to proceed with the work. Messrs, Clerg then prepared sectional working plans, and Messrs, Hurrell and Taylor took out the quantities. It appeared that Messrs, Clerg's original approximate estimate was £17,000, but this was greatly inverses all by the alterative suggested by these mate estimate was £17,000, but this was greatly increased by the alteration suggested, by tests as to the Ioundations of the building, and other matters, and the lowest tender was £29,000. This was reduced in consultation with the plaintiffs to £21,177, some of the more expensive items being cancelled. Ultimately, however, the Athenaum authorities decided that owing to the war they would not proceed with the work. The plaintiffs thereupon sent in their bills of charges. A sum of £310 had been paid, but the defendants disputed liability to the event of £721, which the plaintiffs now

Mr. Godinal him it was imperiant to winds to deep the process in the figure of the bond should be addedoned before them a definite figure beyond when it at the bond should be addedoned before them a definite figure beyond when it at he did not a not a not be saying to Mr. Godinal that he was proper to offer special terms. The plans he proper for submission to the corporation would be do for working drawings. Mr. J. W. Ha Brazennese Street, Minchester, quantity veyor, Mr. A. J. Murgatroyd, aromest, M. Chester, and Mr. J. W. Beauman, and the Manchester, gave evidence as to the reliableness of the charges made by the position. Mr. Akhisson, for the defence, submit it was a stowhat the cost would be, and it was a form making a special contract with the architecture did be to quote the terms of the Reval I state of Beitsh Architects, and to see a form as to what the cost would be, and it was a form did to consider the persons one was do a ing with, who did not know about the senior test.—The Judge: Amenest the arts do as with at the Athenaeum, is not architecture one Mr. Atkinson: It is only a club, they have nothing to do with architecture there. The Judge: Amenest the architecture one Mr. Atkinson: It is only a club, they have nothing to do with architecture there, Leading with, who did not know about the senior with at the Athenaeum, is not architecture one Mr. Atkinson: It is only a club, they have nothing to do with architecture there was not a syllable about it. Mr. H. Stafford C. land, how, secre they could go to that himit. They if it is plaintiff's estimate for £17,00% together withis reports as to the carrying out of the wirk. There was strong opposition to the scheme is the institution. The witness gave his versies of conversations with Mr. C. T. Clegg dures the progress of the negotiations, in which leddiffered materially from the evidence witnessed to them given by Mr. Clegg. He has not the faintest idea, he said, that in addition the charges they had already made, plaintiffs intended to charge the Atheragus with the cost of preparing working drawy, and making a survey. He had no dear the were under any liability beyond £25. Ge Wednesday, witness, in forther examilition by Mr. Atkinson, said nothing would have persuaded his board to go beyond £17 the work proposed, and Mr. Clegg assures member of the board that sum. When seem the carried out for that sum. When seem for as he was concerned he had no idea whethey were giving him it struct at 8 who is a very color of 25 tor the color. with the work. The plaintiffs thereupon sent in their bills of charges. A sum of \$230 had been paid, but the defendants disputed liability to the extent of \$221, which the plaintiffs now sought to recover. At the close of counce's statement the judge suggested that all the parties were men of position in Manchester, and the case appeared to be one in regard to them a arrangement might with advantage be arrived at—Mr. Acton said the plaintiffs were quite prepared to leave it to the indee. They only sought to recover what was fair. The judge's suggestion was, however, not adopted,—Mr. Charles Theodore Clogg, one of the plaintiffs, who was called on Tuesday, said the charge is had been been considered in the index of the plaintiffs, who was called on Tuesday, said the charge is made were in accordance with those recognised by the Royal Institute of British Architects, of which his firm were numbers. The suggestion that the Corporation of Manchester should buy the Athenaum building was not carried out, and the alterations to the building which the directors proposed were abandoned by the Board on account of the war. If eventually the changes should be carried out the directors proposed were abandoned by the Board on account of the war. If eventually the changes should be carried out the directors proposed were abandoned by the Board on account of the war. If eventually the changes should be carried out the sirvestors would have the advantage of the work done by his firm, and by Messes, Illurrell and Taylor, the quantity surveyors. When, following the instructions of the defendant, he invited to describe the work work in the director of the work of the defendant was not misleading, having regard to the proposals he was then asked to exceed the theory of the control of the control

. It twees, the plans submitted to the rp ration and the working drawings. Mr. G. Nieck Mr. W. Fletcher, and Mr. H. Furber, G. N.s. I. Mr. W. Fletcher, and Mr. H. Furber, directors of the Athenaum, all said, in evidence that they understood the 1½ per cent, would cover everything. Mr. Justice Atkin, in giver pudgment, said in the absence of any express agreement between the parties there could be no dispute that the reminieration when the architects were entitled to receive would be 2, per cent, upon the amount of the owest tender, and, in respect of alterations and other work the usual professional terms. The real defence in the case was that the defendents had always been anxious to know be The real defence in the case was that the defendants had always been anxions to know be forehand what the limit of their expenditure was going to be, that before they decided to go on and obtain renders for the work they tried to find out how much they had to pay the architect, and that they understood the sum they would have to pay him was 1½ per contribution of the limit of the contribution of the sum they would have to pay him was 1½ per contributions of the contr sum they would have to pay him was 1½ per cent, upon the lowest tender. It was for the defendants to make out that there had been a special contract. In order that working plansing be preparted it was necessary that quantities should be taken out, because it was urterly impossible that original sketch plans would suffee. He was satisfied that in the absence of proper plans no quantities could be taken out that would be of the slightest value, He found that Messis. Clegg were entitled to recover the sum that they claimed namely, 2½ per cent, upon the lowest tender of £21,177 and 1½ per cent, in regard to the quantities, together with some other charges, including the charge for the survey. He deadlowed as and 1½ per cent, in regard to the quantities, together with some other charges, including the charge for the survey. He disallowed an item with regard to assisting to procure a mortgage. The total claim allowed was £932 2s. 7d. From this amount there had to be deducted £310 5s, already paid, leaving the amount, for which he gave judgment, £671 17s. 7d. In answer to Mr. Atkinson, the judge said he did not think he should grant a stay.

CROSS CLAIMS BY ARCHITECT AND BUILDERS. His Honour Judge Moss sat for seven hours at Wrexham County Court on July 26 to seven hours at Wrexham County Court on July 25 to hear an action brought by Alderman Edward Hughes, trustee for Lewis Brothers, builders, Wrexham, against John Henry Swains n, architect, Wrexham, for the pay-ment of £207 15s 7d., balance due in respect of a residence built for him by Lewis Brothers. Defendant counterschained £169 odd for delay in executing the work, and alleged defective work. Defendant had paid £120 on the claim into court, and plaintiff had paid £15 into court, with a denial of liability. It appeared that in April, 1911, Lewis Brothers agreed to build a house for Mr. Swainson at agreed to build a nouse for Mr. Swamson as £915. They were to complete it in five months, but the time was extended six weeks when the contract was signed in Angust. The house was not finished until April, 1912, and the builders stated that the delay in completing the work was due partly to the indecision of the architect as to what he required, partly to changes and exhibits to the work mr. covainally provided as to what he required, partly to changes and additions to the work not originally provided for, including an extra room, and partly to a strike, which caused delay in the delivery of tiles. Mr. Pryse Lewis one of the builders, said it was impossible to complete the work sconer, owing to the alterations made by the defendant who was building the house for hims f. The work could have been completed within the time stand if they had had a roas a about arometer who knew his own mind.—Evidence was given by independent witnesses. reas a abre are inteer who knew his own mind.—Evidence was given by independent witnesses as no be satisfactory nature of the work done. —Defendant gave evidence to the effect that owing to the delay in completing the house he had to stay at an hot' and to incur additional expenses. He did not do anything to prevent the completion of the work within the period provided by the contract. He had to exercise extended evolved the contract would not now been necessary if the work all here excluded with energy and extendition by the builder. The hearing was ado trued to Sentender II. ad a greet to Sentember 11.

BUILDING HOUSES WHERE THE STREET IS UNDEFINED ATTORNEY.
GENERAL, v. KNOWLES. As the Lanershire Charter Charter Charter on the 27 mit, the Vice Charterly Mr. Stewart Smeth. K.C.) gave allowed in the series. It was an action in which size Attorney General, of the Councy Pally welf Literature of the Councy Pally welf Literature of the Councy Pally welf Literature, as the relation of the Councy Pally welf and injunction to restrain the defendants. Messes, John Robert, and Walter Krowles, builders. Darwer for most timing to be defendants.

Robert, and Walter Krowles, builders. Darwer for most timing to be defendants. The mban district council of Farnham have obtained sanction to the Lorrowing of £15 240 for works of sewage disposal.

A theatre is to be built at a cost of over £100,000 sterling in Monroe Avenue, at Grand Rapids. Michigan. The architect is Mr. Lee the Lorempy of Grand Rapids.

the Darwen Corporation Act of 1887, one clause of which provided that before property could be built the street must be defined. The corporation proceeded against them under the Act, and they were brought before the borough justices and a small fine imposed. An appeal against the decision of the justices to Quarter Society was suggestful the corporation below against the decision of the justices to Quarter Sessions was successful, the conviction being quashed. The matter was then taken to the Court of King's Bench, which reaffirmed the decision of the justices. The defendants then gave notice that they intended to proceed with their building, and the Attorney-General, on the appeal of the corporation, instituted proceedings for an injunction. The Vice Chamber of the decision of the ceedings for an injunction. The Are Chan-cellor said that in their defence the defendants asserted that the judgment of the Court of King's Bench was wrong. Notwithstanding that assertion, he felt bound to follow and give effect to it. The defendants having been shown to have been guilty of a breach of statutory duty, and of intending to continue to commit such breach, the Attorney General was entitled to the injunction he sought to restrain to the injunction he sought to restrain the commission of the breach. The result was that he would make a declaration in the terms of the statement of claim. If the defendants were willing to give an undertaking he would not grant an injunction, but if they left they were unable to do that an injunction would follow. Mr. Sutton said the corporation felt that as this was the first case of the kind they had had it would be a guide to their conduct in other

cases that were likely to arise within the borough. They thought the matter was very important, and they thought the matter was very important, and they preferred to have the injunction.—The Vice-Chancellor: I think you are entitled to it on my judgment, and I most grant the injunction. The defendants will pay the costs of the action.—The injunction was granted accordingly.

LIVERPOOL CORPORATION v. SEW ERAGE CONTRACTOR.—In the Chancery Division, on Thursday, Mr. Justice Eve granted an application on behalf of the Laver peol Corporation for an order to restrain, until the trial of an action, William Muirhead and Co., Limited, contractors, of London, from in-terfering with the plaintiffs in the exercise of their right to take possession of the sewerage work which the defendants had contracted to carry out at the northern outlall of the city sewerage system.—Mr. Manghan, K.C., on behalf of the Corporation, said the motion was upon an order agreed to by the contractors. The Corporation, in May, 1914, invited tenders The Corporation, in May, 1914, invited tenders for the construction of a northern outfall sewer, and a contract was entered into between the Corporation of Liverpool and William Murchead and Co., Ltd., contractors, for its construction. The defendants commenced the work, and were not proceeding in such a way as to give satisfaction to the Corporation, and a question arise as to whether, in the epinion of the engineer, under Clause 45 of the contract, they had exercised due diligence and made such due progress as to enable the work to be completed within contract time. That made such due progress as to enable the work to be completed within contract time. That question was submitted to the engineer, and on the 22nd inst, he gave a certificate pursuant to the contract that the contractors had not exercised due dilgence as to enable the contract to be completed. Notice had been given by the Corporation that they were to enter the progress of the substantial statements and the statements. tract to be completed. Notice had been given by the Corporation that they were to enter upon the work, and the defendants had replied that they were going to resist the Corporation taking possession in the Court. Thereupon the plaintiffs issued a writ and notice of motion for that day.—His Lord-hip granted the internal injunction as stated, costs to be costs in

DISMISSAL OF A DISTRICT SURVEYOR BY THE L.C.C.—On Wednesday last in the High Court before Mr. Justice Rowlatt, Mr. Robert Pledge Notley applied for a declaration that the resolution of the London County Council of March last purporting to dismiss him from his office are district surveyor for Bethnal Green was il'egal and void, and further claimed an injunction to restrain defendants from enforcing

### Building Intelligence.

DEPTFORD. The new set of supper baths erected for the Deptford Borough Council at the junction of Stockholm and Ilder-ton Roads have been formally opened. The entrance is at the corner of Stockholm Road and Ilderton Road, and gives direct access to an octagonal hall, adjoining which are a waiting room and office and store. Accommodation is provided for eighteen baths, all of which are placed on the ground floor, the cubicles being tiled from floor to ceiling, with a view to keeping down the cost of maintenance. On the first floor. the cost of maintenance. On the first floor a flat containing a living-room, two bed-rooms, and a kitchen-scullery is provided for the superintendent, while the basement utilised for accommodating the boiler, fuel, and storage of hot water. The baths were designed by Messrs, Joseph and Smithem, of Queen Street, Cheapside, and erected by Messrs, W. S. Barton and Co., of Chancery Lane, W.C.

PAISLEY ABBEY.—The first part of the Abbey restoration at Paisley has been completed, and was informally opened on Thursday last. This is the cloisters, the money for the rebuilding of which was provided by Mr. and Mrs. A. F. Craig. Sir Charles Bine Renshaw, Bart., chairman of the restoration committee, who was accompanied by other members, mentioned that the work had been carried out to the plans and under the supervision of the architect, Mr. M Gregor He congratulated him and Mr. Chalmers. Taylor, the builder, on the successful com-

pletion of their work.

WAGES MOVEMENTS.

WAGES MOVEMENTS.
BRIDGWATER.—An adjourned private meeting of the Bridgwater Conciliation Board has been held, under the presidency of Mr. Charles Doughty (barrister-at-law, appointed by the Board of Trade), to consider the question of wages and rates of pay of men employed in the brick, tile, cement, and timber trades in the town and district. There was again a large attendance of employers and employees, and after a conference lasting several hours, a satisfactory settlement was arrived at, advances satisfactory settlement was arrived at, advances of varying degrees being made to the employees, both in regard to day and piece work. \_\_\_

#### TRADE NOTES.

Under the direction of Mr. Reginald T. Longden, architect, Boyle's latest patent "airpump" ventilator has been applied to the Chapel, Bottom House, near Leek.

->--

Mr. G. T. Kingston has been appointed by the Elloe Court of Sewers. Spalding to the position of surveyor, in place of his brother, Mr. W. Kingston, who has resigned the office. A Local Government Board inquiry will be held at Irlam, near Manchester, to-morrow (Thursday) into an application by the urban district council for sanction to borrow £15,900 for works of sewage disposal.

Lieutenant John Harley, M.A. (Oxon.), 13th Worcestershire Regiment, born in 1880, who was killed in action in the Dardanelles on June 4, had for some years been engaged on historical research work at the Record Office and had recently been made a Fellow of the Society of Antiquaries. On the outbreak of war he gave up his work and enlisted in the Artists' Rifles.

Mr. Egerton Swartwout, architect, 244, Fifth Avenue, New York, has prepared plans for a memorial monument to be erected at the grave memorial monument to be erected at the grave of Mrs. Mary Baker G. Eddy, founder of the Christian Science Church, in Mount Auburn Cemetery, Lanesborough, Mass. A fund of 110,000 dols, has been raised for the erection and maintenance of the memorial.

and maintenance of the memorial.

At a meeting of the Bristol United Trade Committee of Carpenters and Joiners, held last week, the following resolution was adopted: "That this committee is of opinion that all public works, such as schools, etc., which have already been sanctioned, but temporarily stopped owing to the war, should be put in hand forthwith, in order that the distress which at present prevails in certain sections of the building trade may be relieved."

Obituary

Dignity, in architectural mass, seems largely concerned with the die-square, as seen in perspective. We are not at all cognisant of this effect in elevational drawings. On such, the cube and the rectangular are insipid—relatively so, at any rate, to their actual appearance. But rear up a real cube of 50 ft., and view this in "sharp" perspective: we now see in diagonal view, and neglecting the lower ground-level angles, two obtuse angles and one, that is to all appearance, if not technically, acute. In that nominally acute angle seems resident much of the grandeur and impressiveness of architectural mass. It is dominant, almost aggressive, as is well shown in a near view of any great square building, as in an angle of the rained Parthenon. It would appear that that quality which, for lack of a better term, we may call "over-awing," in architecture, is best evidenced in simple rectangular masses.

If, now, we cut off this dominant angle of the cubical or rectangular mass, we have the two obtuse angles as before, plus acute angle has vanished. Yet the process of sheering off the arris of the cubical building mass is of common occurrence. An architect having a corner site to deal with no doubt finds his thoughts turned in the direction of angle tower and turret, as giving emphasis to the junction of the façades. The necessary process in this case generally entails cutting off the angle of the cubical building mass. Until it appears the best course, we shall do well to give consideration to the point, bearing in mind how, in the elementary massform, the cutting away of the arris plainly results in loss of dignity. Can we afford to lose the sharp arris? This is a question every designer concerned with corner sites, and, indeed, with sites generally, should ask himself, for obviously a very important principle is involved.

to lessen boldness of effect. In apsidal ends, no doubt, the system of buttresses, pinnacles and flying buttresses, compensates for loss of dignity in the mass, and the eye gains interest in the variety and play of subordinate parts. The 135 deg, of octagonal plans must therefore be considered not only a basically weaker construction, but of less boldness; yet, since suitability of design to end in view rules, either for this reason or because we are familiar with and have acquired a taste for the octagonal tall chimney, this order of plan for this special construction is no doubt generally To cut off an angle seems, in all cases, to lessen boldness of effect. In apsidal ends, no doubt, the system of buttresses, pinnacles and flying buttresses, com-

square shaft would be deemed unsatisfactory. We may perhaps refer this antipathy to some purely esthetic consideration, or we may judge that it is because we know the square form is not suited to withstand horizontal wind-stress; and how inseparably bound up with architecture is suitability for purpose may here be seen, in that we all of us would deem nothing better in effect in domestic fluebuilding than rectangular chimneys. Again, as concerning this point, and the effect of tall chimneys, these and towers and monuments, usually founded on some plan based on or included, symmetrically, within the square, seem to be under some different general rule of design to those applicable to ordinary building construc-

Since a circle may be regarded as a multangular figure exhibiting an infinite number of straight lines on its boundary, the octagon, in this way, may be regarded as an approach to a circle. It is well understood that walls arising from a circular plan lack the dignity and impressiveness of rectangular buildings; hence, we may proceed to argue, the octagon necessarily is of inferior stermness and dignity to the square-angled plan. If we accept this as an hypothesis, we know that each time we cut off an angle we weaken effect and give less dignity, but may find a measure of compensation in added variety, grace, and eye interest. Light and shade effects attain a maximum with walls at 90deg., so that as we increase the angle we lessen the effect of chiaroscuro. In chamfering the arris we lose in boldness of contrast and definite light and shade, but we gain in elegance and grace, perchance.

For these reasons we shall do well not lightly to cut off corners of building masses unless special and, at times, practical considerations dictate. As a general rule, we do not want to chamfer every great arris, nor, for the matter of that, every small one; for we should thereby reduce all parts and the whole to a sleek tameness. On the other hand, it is doubtful if we can improve, by any scheme of

appreciated. Equally, no doubt, the gain seems to be a rugged massiveness the corner piled up with a grand and imposing mass of stones and juting salient cornices. Whatever the gain, whatever the loss, there is an addition to the pictorial, and, generally, the effect of these corners seems admirable. Yet one would not like to see the Parthenon so treated, nor can we imagine an octagonal pyramid of Ghizeh retaining the section majesty of that arising from a square plan. Plain, die-square angles, it not architecture itself, seem a necessity for quiet, refined dignity of mass. Ever, we cannot but think, the architect needs to hold fast the belief that the plainer and simpler and the more square the main mass the better the foil and affect to more elaborate and varied subcrimate additions. We value the octagon bay the more for its attachment to a rectangular-planned house; we should surely less esteem it, were it attached to a great octagonal main building.

Where, then, we are proposing to cut off a corner, we may well pender over the ultimate effect of a shoerel-off arms—a mighty chamfer in the case of a large building. It is at times unavaidable for practical reasons. We see many examples of building chamfering. They may be generally classified as the plain chamfer and the curved and incurved chamfer, all of which may have virtual fillets stopping each façade. Few will hesitate to condemn the effect of the plann chamfer a short wall joining the two main walls. The curved olianifer looks weak; while the incurved are, like everything receding and withdrawing, is essentially expressive of weakness. No doubt tially expressive of weakness. No doubt building line exigencies and high ground values mestly stand in the way of a rein-forced angle on the St. Paul's mod L. Bearing in mind the poor effect of a cornice running round a plain cut ff angle. me running round a plain out if angle, we might consider anything better that this, hence, possibly, the argument of recessed, or, as we may the letel corners, whole the means of the although feeble in its mass that containly gives a vasible better. tainly gives a vastly better effect.

#### TRAVEL NOTES IN ITALY

What is the chaim of Italy! That .harm exists to very many is undoubted. When once you have come under the speal of this romantic land, the deep longing to re-turn will seize at most unexpected moments. The sight of a Roman urn, a Madonna, a majorca reputation the smell of typics or stone pane in a hot sun will be sufficient to rocal, memories of sun-baked walls, of vine-yards, cypress (venues, white towers, way side shrines, and the teeming and picturesque Lite of the roadway.

Some few years ago a party of us spent some months in the larger towns of Italy, and, feeding the charm still upon us, we arranged another vis.t. intending to spend our time in some of the smaller centres; and with this object is view landed at Naples at the care of Jeograpy last year. Propurous circumstances of to our arrival at the very stasses of via Leour previous trip terminated, so a conveyedge of the seasons was con-

VAPIES

NAPLES.

It is most not Naples during February was recentrally sight frests at neght were so cold toy so in lays, and sight settled open ingations. Comfortably settled one ingation to the famous bay we renewed particle stage streets of Naples, exposed the amount of streets of Naples, exposed the amount of the street of Naples, exposed the amount of the streets of Lagreways, a surrounded and corrow toy the old, but more recent, in denication, admired the fine effect of the capital and are admired the fine effect of the capital and are admired the fine effect of the capital and are admired the fine effect of the capital and are admired the fine effect of the capital and are admired the fine effect of the capital and are admired to the fast main. National Gardens, on the fast allowed traffic in the Chapa. As it was the season, Naples was crowded with ine season. Naples was crowded with visitors. Bertolan's Terrace was filled each

dry for attention tea with an interesting sin politin crowd well worth studying. A polisant trip from Naples is to take the trib a from the Toretto through the huge gritto or tailing, and then along the coast grifto or tailier, and then along the coast past the ironworks to Pozznoli, a dirty and most interesting spot. Here St. Paul landed on his veyage to Rome, and the old dock is well worth visiting for those in search of the picturesque. Solfatina is easily reached by carrage or by walking from Pozznoli. The guide conducted us over the glistening bed of the crater by a devious path, avonuing the numerous boiling mud springs. The ground sounds hollow underfoot, and when a light is applied to the sulphurous vapour issuing from crocks and rents in the ground. the smoke issues from other rents hundreds of feet away, and even from parts of the criter cliffs high above our heads. Flocks of sheep and goats were grazing on the edge of this inferro, and the bamboo buts of the shepherds were erected within a few feet of the boiling springs. The whole of this distrut is dotted with ruined Roman buildings. many buried by the numerous volcanic dis-The ancient Temple in Pozzuoli, which is approached through a bath-house, shows the signs of submergence under the sea, and is now again sinking below sea level.

We spent a long day driving round the Bay of Bare, crawling into decorated, smoke blackened tembs scattered among vineyards looking down on the beautiful hav in which Agropp as was drowned, descending into the great variet water eistern on Cape Messina. from which the Roman Fleet was watered entering the mouth of the underground passage that connected Cumae with Lake Aver-The district is a museum of ancient remains, and appears to be in the hands of private owners. who use decorated vaults as stables and storehouses, and expect a few quers from visitors

Returning to Naples: The Castle Nuovo. Returning to Angles: The Cisic Asserts, with its har Isome carved entrance gateway as I be not doors, is approached through most any stores. Obtaining permission from the sentry, we passed into a vard amoug

\* A paper read of the Royal Victorian Institute of Arab functions by Mr. Percy Kerner A.—A fine display of Hilles Flustrating the paper were shownly Mr. C. A Cowjer Flu

piles of empty shells, transport wazgons, and other warlike stores, and had time to examine the carvings of the towers, representing scenes from the war with spain, while a small boy went in search of the guide. When he appeared, armed with an enormous key, he pointed out the panels of the bronze doors representing incidents in local history. The heavy bronze has in one place been broken by a round shot, which is still embedded in the door. The inner court of the castle is crowded with military waggons, arranged in a very haphazard manner. The guide, with his enormous key, unlocks the chapel door and conducts us round the various historical and family monuments. A very fine c.rcular, open, newelled staircase leads up to the private apartments; a narrow, steep stairway also leads down to the dungeons, which are reserved to the last. The guide shows the decapitated trunks, in their coffins, of two victims to the Spaniards' explains that they were preserved by being embalmed in sea water. He then lifted the hid of a third rough wooden coffin, in which is the munning of a strangled cardinal, still wearing his vestments. The awful look of horror, the gaping mouth and twisted hands and feet me as realistic as when the unfortuand feet he as realistic as when the unfortu-mate whetch perished hundreds of years ago. The guide, to relieve the situation, so fraught with horr or, gave the withered, leathery flank a playful slap as he closed the lid, and asks us if we are "Contento." We assured him of our complete satisfaction, and only longed for the agency rive which to force his due for the open air, in which to forget his dungeons and their horrors.

The Old Church of the Carmine, situated just belond the Porta Capuana, near the ancient harbour of Naples, is one of the most pictures me in the town. At the time of our visit a horse fair was being held at the very doors, and we had some difficulty in dodging the heels of the stallions which were being offered for sale. Outside, the church has an imposing tower of black and white marble. The greasy, heavy leathern curtain that hangs at all church doors in Italy in winter has to he pushed aside, and we are in a beautiful mellow interior. Barroque in style, glowing mellow interior. Barroque in style, glowing with dull gold. Long rays of wintry sunshine, heavy with dust motes, shine through the elerestory windows, lighting up shrine and statue. Here and there, amid the general gloom, the poor of Naples are here at their devotions. Matins are being sung, bells toll, the organ peels out, while we follow intricate passages into the chapel behind the altar, where, standing among a crowd of kneeling devotees, we are shown the miracle-working picture of Saint Bueno. We walk back from the Carmine, through some of the wonticularly pleased with the street of the artificial flower workers, whose wares are shown in the open street, giving it a most festive appearance. It was carnival time, derful streets of the old town, and are parfestive appearance. It was carnival time, and, meeting a crowd of students, our ladies were well sprinkled with confetti.

#### AMALFI AND RAVELLO.

One day we had a discussion as to the composition of the characteristic smell of Naples. some said wasting coffee and stable; others, humanity; all agreed that the predominating moise was the ceaseless braving of the humble donkey. From Naples, a rapid trip to Capri. Somento: thence by the famous roadway along the Gulf of Salemo to Amalfi. Here we rested at the monastery high on the cliff above the bay, celebrated in Longfellow's The old cells are converted into bedrooms, the refectory is used as a dining-hall. the chapel remains, and a portion of the cloister. The vine terraces and lemon or-chards, with the water distern and demented aqueducts, are maintained as of old. In the hanging woodland above the gardens we were pleased to find the first or hids, wild violets and daisies, and other signs of spring. It is hard for the visitor to realise that Amalfi was an important Mediaval republic, and a bostling commercial port at the time of the Crusades A present the town is crowled into a small space between two headlands, at the month of a mountain stream. The houses climb the cliffs on either band, and are approached by intricate, nneven passages.

The cathedral, backed against the chir. and | 1. approached by a high flight of steps, is an approached by the surrounding buildings fwo ancient castles dominate the headands, and the whole, as viewed from the city many is most picturesque. The ancient city hes submerged under the blue waters of the Gulf, and the fishermen still hear the church bells ring for matins and vespers as they float above the submerged towers. We elept well in our cells, notwithstanding the fact that We sleps a portion of the monastery has been carried away by a rock-fall from the chifts, the scar of which is plainly visible.

All who take this route should visit Ravelle from Amalfi As the road is very steep, some of our party walked up by the old mule track. The track follows through romantic scenery. a mountain stream, and passes through vine yards and chestnut woods; the banks were purple with croens. At one spot we saw how the immense labour of building the terraces for the vines was accomplished. The whole available population was at work—men, women, boys, and girls—all carrying stones of soil. Only by such a combined effort could such an amount of work be finished. Alont 10d. a day is a labourer's wage, I believe, these parts.

Ravello is superbly situated, over 1,500 it above sea-level, and overlooks miles of coast We felt we could almost throw the proverbial biscuit into the Gulf from the terms of the Hotel Belle Vue. The padronna, hearing we were from Melbourne, was delighted to show us a photograph of her uncle's house in "San Kild," Melliourne. The contrast of this photo with our surroundings was striking Rayello, stone built, ancient, deserted, side by side with St. Kilda's bijou villa. The cathe dral contains the well-known inland mosan pulpit, supported by polished shafts, on bases resting on the backs of lions and lionesses. Scriptural mosaics and also some curious Many of the palaces in Ravello have marble columns at their entrances removed from the ruins of Paestum. The Ruffalo Palace, the garden terrace of which is one of the sights of Italy, bears a tablet erected by the inhali tants of the district to the generosity of the Gibson-Carmichael family, who at one timeresided here. An incident of the road was characteristic. One of the ponies, beautiful little creatures from Sardinia, lost a shoe The driver produced a spare one and a handful of nails, and with a spanner as a hammer proceeded to make good the defect; and a botched job it was. But there being no option. we had to complete the journey in this uncomfortable manner.

#### Rome

Rome is too large a subject to touch in a discursive paper The huge Victor Emmanuel monument dominates the Capital. Time. alone," as an Italian gentleman explained "can pass a true criticism of such a stupendons work." Most lovers of the ancient explained. such a cient condemn this work as disappointing and in had taste; but Rome has survived many building periods, and its great charm is as au historical reference to great national movements; and the new memorial will pass into the future as one of these, built by the State to catch the eye of an emotional people, in competition with the great Church memorial on the Vatican Hill. It has failed to eclipse the work of Michael Angelo, both in utility and in grandeur.

Architects in Rome must have an interest ing time, as it is a rare thing to open founda tion trenches without finding evidence of earlier construction, and occasionally sculp-ture and jewelry of great value is unearthed. The authorities of Rome are waking up to the fact of the great value of the historic remains

to from or the control of the activation to trumer. The Marchae tystim and the Convenient of the Convenient of the stop of manifolding to the trumer. At trumer to the support of the supp ine shops cross from a wet three flys, a could metally in the constant of the flys, and the metally with the metally writers were first provided metally writers were first provided metally writers were first provided may write the fourists for heavy the flowers and compared for the form the rocks of double grands, and fly made between the first flowers, who are stopping all others tradice. From Rome, delightful day types were made by electric from across the Compagna to the towns of the slope of the Arban Hals. A good service of cans herves Rome from the vicinity of the Stazione de Termina ha a short time we find correctes trade of the vicinity of the Stazione de Termina ha a short time we find correctes to cersulg the undilating slopes of the Compagna, "so beaut ful as to fill one with medancholy," as an Italian friend remarked Mountments and runed aquedicts stand out growth the long hur on the outside, looking uncommonly like ancient satyrs, attended their flooks, their temporary huts of hamboo remanding us of Indian wrighting. The train like follows the root of the kinds of the childs of the follows the root of the kinds of the childs of the follows the root of the kinds of the childs. their hooks, their femporary limits of hamboo renimiding us of Indian wigwains. The train line follows the road to Frascatt, and the whostle has to be frequently sounded to wara the sleeping driver of a picturesque wine cart which has strayed between the rails. After some ten indes of this pourneying, the line leaves the open Compagnia and ascends be tween vineyards in which are mounted guns with wide hell mouths, for shaking up storm centres in the heavens before the hail can descend and rum the crops. The train divides. one branch going to Frascatt, famous for its villas, 2 ir leus, in l'wine. From Frascatt a delightful trip may be made to Tusculum, and I would advise good walkers to go on foot, as the views all the way up to the rains good distribution. are delightful. The right-hand branch of the train runs to Abano, where we get a fleeting glumpse of the be intiful crater-lake; and then gampse of the methorin cratter-rate; and then on to Genzano, some twenty miles from Rome. Genzano is described in "Baedeker" as a poverty stricken village, without attractions; but to sit in the central plazza, and watch the women carrying we'er in copper buckets to their homes, is worth the visit. Two types are very noticeable a fair haired, fair-com-plexioned type, supposed to show the northern blood of Churemigne's warriors, are mixed with the smaller, vivacious, dark skinned Italians

Our objective in Genzano is the Lake of Nemi. Climbing the steep street, accompenied by a crowd of urchins, each anxious to earn a soldo, we reach the gate of the Pulizzo Cesarin : but before admittance is granted, we must interview the lordly majorhome at the Palace adjoining. We enter our names in the visitors' book, the gates are unlocked, and we are is free of these beautiful gardens as if we owned them. This is a delightful feature of Italy, the way one is welcomed and shown over private property I' sometimes leads, however, to awkward It is sometimes leads, however, to lawkward moments, as when some over-zealous guardi in leads one into a dining-room in which the rightful owners are sitting down to dinner. Awkward for the visitors alone, as Italian manners seem equal to all occasions. The winding noths of the Palace Gurden lead through hanging woodlands down to the shirting levels of the lake, 400 ft Jelow. We spout hours windering in this sylvan solundering the first three of the lake and single specific transfer in the result of the control of the lake and the sylvan solundering in this sylvan solundering to the lake and the control of the lake and solve the lake and the sylvan solundering in the woods searching misu coessin by the lake and the color of the lake and the lake and the lake and the color of the lake and the lake an spent hours windering in this sylvan solutide and sturbed, picking wild violets and for clessus in the woods searching misuscessfully of the amount out ficial outlet built by the Romans, and still mountaining the loke at a four inform level. The nourney back to Rome in solution level. The nourney back to Rome in solution level and the evening light, with the floating dome of the Fietro growing ever larger and more discounted by the force other features are distinguishable, at least

protect them from injury. Unfortunately, in some cases this care has erred in taste. The beautiful little round Temple in the ancient cattle-market has been surrounded with rockeries somewhat after the St. Kilda Road nattern. Personally. I much preferred the litter of straw and picturesque groups of contradini which I knew of old.

Rome was indulging in the usual epidemic of strikes during our visit. The cahmen struck against the regulation fares, and received an increase. Still, even with this addition, we found it often more economical

#### 1--1-1

a drive of some three of feat moses from the station across a dusty as and then a steep climb up to the rosyping city chinging like a swallow's nest to the for will side of Mount Sibascio. The chief in terest here is, of course, the connection with St Francis, and the great church or, rather, churches for these are two—one super imposed mon the other—called after his name. The tresposes of the lower church, which reone back, again and again, to their study are the char attraction to tonists, but the rest of the town is well worth exploring, and the surrounding country is most beauting. We were amused hearing an American, who had just arrived, and "done" the churches. had just arrived, and "done" the churches, remark to his companion; "We can't get out et the place til to-morrow morning.

A hot walk or about four miles by mule track to t possible for motors, thank heaven! up to lour, glistening slopes of Mount Subas to brings us to the hermitage of the Careeri, 2.300 ft. above sea-level. It was St Fra a s. of Assisi's light to refine here for monitation, and prayer. A small monastery was bond on the edge of the rayme, and a small park enclosed. After the heat and fatigue of the climb it was delightful to rest in the shale. An aged brother drew cool water from the well, and provided refreshing wine for us as we sat on the parapet of the compand, enjoying the extensive view. bed of St. Francis is shown, also many of his personal relies. There is a most charmal modern statue in the park, under the free where St. Francis blessed the birds, of the saint and his feathered friends. We were sarry to leave Assisi, after a visit of a week: but Easter was approaching, and had energed to spend that season in Floren e; so, having a two-horsed carriage, drove with all our luggage some sixteen miles across country to Perugia, the towers of which, dire t'y in the line of the setting sun, had a girly be housed us during our stay in

#### Perugia

is a town of great interest, and most impor-tant to the student of pointing, as only here can Umbiran art be properly studied. Built on the top and slopes of a hill, the views over the surrounding country are impressive. Those interested in architecture should look up the Oratorio of San Bernardino, a magnincent palsel rome work, in which marble and terra atta are employed: to the right of the Orat is a descrated church, used as in ir two ks. The forges, seen in the dimit-digners light, and the smoke-blackened wa's are nest picturesque. A young mechan, has ted us in to see Grottos (Jottos) Fres. s. It was evidently a standing joke of his, who have minerally enjoyed; but we were not on these green, and we all laughed together.

The yearb of these hill towns of Italy have a pastime suited to their environment. Large lass a work about the size of a thereone are bowled down the curving roads who have a tree bowled down the curving roads who have most a flight of discs bounding down the slone. I tried my hand at throwing one. but it son end dies ourse in the gutter

#### PROBLEM F

at East is most interesting, not only the ceremone of the town itself, but those in the size of Light gradient are admitted but to all require an evening to them.

The v wazgon. The lenting, with sharp sand, is done. Our stay

"were" was (a man in the form of a wolf) still haunts the streets at might, plunging into the Fountain of Fontebranda at the first streak of dawn, in the belief of the more ignorant of the citizens. The visitor receives nothing but kindness from the fine looking people The strong tower of Parazzo Pub-blico, over 300 ft. in height, one of the noblest in Italy seen from one of the dark and marrow streets in the full flush of sunset will never be forgotten. Sodoma's picture of "The Sconrging of Christ," in the Bella in the Bello A(t), impressed me more, I think, than any peture I have seen. The simple technique and use of the in this fragment is masterly, and the finest thing in the Accademia collection.

VIA REGGIO. We rested some weeks in Via Reggio, an Italian watering place on the Lagurian Sea. and enjoyed sea bathing and sand-baths. sands are strongly impregnated with iodine, and so are recommended for rheumatism.

At Mrt Reggio there is a prosperous shipbuilding business going on, most interesting to anyone connected with construction. The raw material for the ships is grown in the adjoining onk and pine torests; the logs are cirted to the docks, and there cut to timbers planks by sawyers, cutting the curved timoers from natural grown trees, the top sawyer following one line, the bottom sawyer another, thus getting the proper shear. pine planking is also siwn so as to follow the natural curves of the trees, and the curves all seem to come in somewhere in the onstruction. Of machinery there is little or none. Ropes, canvas, sails, boats, iron work, are all being made near the same spot. The Via Reggians are very proud of their ships, and well they may be, as they are beautitul specimens of naval architecture, sound and well built. As they say if a seaman is drowned: "If Antonio had only sailed in one of our ships he would not have been wrecked. From Via Reggio we visited THE FAMOUS CARRARA MARBLE QUARRIES. By the courtesy of the Marble Quarries Railway Co., a special carriage was attached to one of the trains leaving Carrara for the quarries, high on the mountains. The line ascends by a series of zigzags, and fine views of the plains are obtained as we rise higher and higher Below us it looks as if the whole population of the Carrara valley had their washing out to dry; but we are told by the courteons official who accompanies us that the white dots are blocks of marble waiting • he sawn into slabs. The sawing is largely done by witer-power, and the mills line the mountain torrents. After ascending some thou-ands of feet, the line enters a dark tunnel, and then we again emerge into daylight. What a change! Instead of the green squares of the cultivated plain, the white towns and villages, the di tant blue Ligurian Sea, there is a mountain villey of dazzling whiteness Large stacks of marble blocks line the rail way ready for transportation. The slopes and cliffs above us as far as we can see up to the vivid blue Italian sky are covered with glistering white spalls and chippings of marble, down which, on rough skids, large blocks are being lowered by crowds of men with hempen ropes. The spoil from one quarry overflows another, and endless are the law smits in consequence between the different There is a proposal to erect overhead transporters to convey the rubbish to the sea, there to be used in building a much required breakwater. But want of co-operation between the quarry-owners has so far stool in the way of realisation. Leaving this station, still ascending, we pass through a long tunnel into another and higher valley. where the same's one is reneated. While cur term of trucks is being lorded by overhead ni verenn e otal nedet ore av sellovert which a lunge nerss of stone has been blown down by powder and is ready to be cut up into blacks. The good stone in the cliffs is in irregular masses, surrounded by disinte-

crated state which is worthless. This would from the have accumulations of smalls

end robbesh. Flattric power is simplied from

renegating stations on the other side of the range, and a good deal of marrying by wire

in the valley is punctuated by warning blasts on horns, followed by heavy detonations, which reverberated from the cliffs. While the train is being loaded we adjourn to a little inn under the shelter of a projecting chif; it is plasant to retire from the heat and glare into this humble hostelry, where bisenits and a sweet fruity wine are served, while the padrone shows us his portrait by Sargent, who spent some weeks here fas-cinated by the scene. The railway company convey over 1,000 tons per day to the coast. and there is also a large trathe by ox waggon from the valleys not served by the railway. The company's representative told us that blocks of marble at present in Rome, conveved there in ancient times, are far beyond the capacity of the railway to handle. It is not known how they were removed from the quarries; but once on the sea beach the sand was dug away round them, and in the dock thus formed a ship was built outside the block of stone, which was then floated to sea. The blocks were Imperial property, and the ships were labelled A.U.F., and could demand assistance from any other vessel encountered on the voyage. This has passed into a local proverb, A.U.F. meaning "to get something for nothing."

These notes have covered some of the places visited during our journeyings in this most delightful land, where we received nothing but kindness and courtesy from the people, and which we left with regret and

the hope to visit again.

#### >000 PERSHORE ABBEY.

The vicar of Pershore (the Rev. F. R. Lawsont has issued a report on the work accomplished in connection with the reparation of

Pershore Abbey.
In 1912 the removal of ivy from the south transept disclosed serious michief, and further examination showed danger of settlement in the west wall, while the tower itself showed signs of giving to the west. A committee was formed and issued an urgent appeal, and the work of repair was begun. The transept wall reports) has been well repaired, the (the vicar larger and more ancient cracks being filled with fresh stone; the smaller, but newer and more perilons, ones by "grouting" with liquid coment. Iwo large flying buttresses now support the tower from its western side. and have given it stability. Before this work was completed, in July, 1913, an inspection Before this work was completed, in July, 1915, an inspection of the decorated vaulting of the presbytery was made from a platform, and from above under the roof. Very grave peril was discovered, some of the work being almost ready to tall. The great tie-beams of the roof had rotted at their ends, had slipped from the wall-plates, and were bringing a heavy bur-

den upon the stone vaulting.

By the architect's advice the church was closed for worship. His report, received later in July, showed that about £2,000 was required for absolutely necessary repair; further, that it might be found necessary to add additional flying buttresses to the presbytery, and to underpin the south wall of the transept: work requiring fully another £1.000.

A county committee was formed to organise funds, a contract was accepted, and work began in October upon the roof. The tiebeams were either renewed or spliced, and put back upon the wall-plates; the worn-out lead of the outer covering was replaced by re-inforced concrete. Early in January last year scaffolding was erected under the whole of the presbytery vaulting, and its careful repair was carried on No new stone was used, and except for some damage to one of the larger bosses, the whole of the beautiful work was found inharmed, made secure, and given a cleansing which has made its loveliness more apparent than before. Some minor repairs included the reglazing of the electory windows, which were in a bad condition, and better glass has brought a fuller light upon the vaulting. The repair of the vaulting was the vanlting. so thorough that it was not found necessary at present to add extra flying buttresses to the walls, and as the cracks in the south transept wall showed no signs of movement, the underpinning could also be postponed until danger threatened. On May 18, 1914, the Abbey Church was reopened, the Bishop of Worcester

dedicating the new works and the repairs to True, there was a duty drawback on Dat

the old.

The accounts of the Reparation Fund show that £3,459 9s. 11d. was raised in less than that 25,450 88. Id. was laised in less than two years, and that the work has cost £3,450 8s. 8d. The balance of £9 1s. 3d. will be applied to the replacing in the Abbey, near the west door, of a late Norman fout, which for centuries belonged to the Abbey. cast out some eighty years ago to make way for a larger and newer one, and given away to a gentleman at Kempsey. His descendant, Sir R. C. Temple, however, has given it back and it will shortly resume its proper place and sacred use.

#### ---THE GOLDEN AGE OF WAINSCOT OAK

The golden age of wainscot oak, remarks a writer in the Timber Trades Journal, may be pictured in its bud or bloom during the er half of the seventeenth and the first half of the eighteenth century, when its use was largely influenced by Sir Christopler Wren and King William III. (1689-1702). The former has left this impression with us in the interior of his London churches, and the latter, hand in hand with him. in Hamp-ton Court Palace. Here we have the opinion of a practical man who flourished in the City a century ago: "The wainscot oak in the old houses in the country was mostly English cak, there was not much Dutch or Riga wainscot before the reign of William the Third. I think Sir Christopher Wren introduced a great deal of it in this country in his time; he was building for a Datch king; therefore, it was natural he should use it (John Armstrong, before the Committee of Timber Duties, 1855).

"Dutch wainscot," which he placed first was the finest wood that Europe or the world has ever produced. It was obtained in the sawn or converted form, and quartered to 17 in. a century later than Wren and Wil liam's time, and, what appears to have been forgotten, had its natural floatage and outlet in the Rhine. Riga. Memel, and Dutch wainscot, in the log form only, were then rated as inferior. Here be it known that the word wainscot implies a board, not a log.

In the evidence of Henry Warburton, Esq. P. (who succeeded his father in 1808 as "wholesale foreign timber dealer" and "yard-keeper" in London, and conducted that business until 1831), we have the following: "Formerly most of the wainscot used in this country came from Holland or Ostend. It is cut from logs that are brought down the Rhine, and which grew principally, I believe, on the country ad joining the Moselle. The windmills by which it is cut are principally at Westzaam and Zaandam, near Amsterdam, but there are others near Rotterdam."

There was a "standard board," the unit

of the Dutch sawn wainscot trade, and every detail hung upon it. The length was 12 ft., its other dimensions about 11½ × 1 in., which possibly meant 12 super, feet of 1-in. wood in a newly cut board. In 1757 such a board, computed or otherwise, could be imported into London, all charges paid, for three shillings and three pence, which included barely 6d, duty (about  $3\frac{1}{4}$ d, per ft, superficial), a rate that obtained until 1785, when the duty was advanced to 10d. This, it have a protection in foreign of gelovial hitherto protective in favour of colonial woods, was then swelled for revenue purposes woods, was then swelled for revenue purposes. By 1803 the same wainscot board under like pressure cost 7s, 4½d, to import, out of which 2s. 11d, went for duty, bringing the price up to nearly 7½d, per ft. In 1814, nearing the end of the long war, the import cost stood at 11s 4½d, carrying a duty of 6s. 4d. From 1757 to 1814 the board costing 5s. 3d.

During all the above years there was not a penny duty imposed on wood from our colonies, or, indeed, not until 1821. European oak was thus strangled, and the hardwood trade was largely turned into mahogany, cedar, and American or Canadian oak. This handicap accounts for the solid mahogany doors we see in our old-fashioned houses, and the same wood in church and chapel fittings of our fathers

had increased two hundred and forty-five

per cent.

wantscot and other duty paying woods we used in Established churches, but not a porin other churches and chapels 

### ARCHITECTS AND THE NATIONAL WAR REGISTER.

The Executive and General Purposes Committee of the Architects War Committee have been considering in what way architects can most effectively promote the objects which the Government seek to obtain by the

which the tovernment seek to omain by the formation of the National Register.

"Voluntary unpead) work. State what portions of your time you could ofter and in what district you could

Note (b) is merely a suggestion in case it is desired to ofter gratuitous service **→** 

#### FRESH AIR AND EATING.

The New York Commission on Ventilation has recently made a report on one more phase of the investigation which they have been carrying on with so much thoroughness for the past two years. Their earlier work shows that people can remain in an unventilated room for several hours without there being any direct effect upon the pulse, blood pressure. body temperature, respiration or metabolism. provided the temperature of the room is kept down. Their latest results, however, show that lack of ventilation very decidedly in-fluences us in a way in which most of us certainly do not want it to, namely, in our de sire to eat.

In order to carry on this part of the general study the commission divided the number of people on whom the experiments were con ducted into five groups, only one group being under investigation at a time. Those in the first three groups were young men and those intse three groups were young men and those in the last two, young women. Each group of these scientific aids remained in the room, which is used in all the ventilation experiments, for a period of several hours, five days a week, for several weeks. On half of the days the room was well ventilated. On the Оп. all other half there was no ventilation. occasions the temperature and humidity were controlled so that they were the same through

controlled so that they were the same through out the experiment.

After the people had been in the room for a period of from two to three hours each day a luncheon was served to them. How terms ing a most was placed before them the some mission fails to report. Neither do they record whether individual idiosynerasics were twowed, but without doubt the menu was record whether individual idiosyncrasics were favoured, but without doubt the menn was first cases. All food was weighed and its value in calories recorded before each meal. What was left over was again valuated. In all, something over 5% meals were eaten, one half of them in fresh air and the other half or vitiated air, with the result that on "univenity that days" has food was consumed than on "fresh air days." Furthermore, the records in Control of the effect of vitiated air upon the posterior is record the longer the experiment posterior.

#### BEAUTIFYING OUR STREETS BY PROF A A STOUGHTON.

In the legical development of a town the the logical development of a fown the measures of he first fixtures for lighting, standards for currying wates and signboards, mail and fire alarm boxes, receptacles for waste functions, shelters and waiting stations. dressing found ups for man and least, krosks for vending and advertising, public con-ventences, entrances for sub-surface struc-tures, bridges and elevated structures. Alof these at alres must, of course, be treated decoratively so as to be agreeable in form and to harmouse in scale and character with then surroundings. In many cases the criginal useful purpose is merged in the decorative, and certain of them as four tains, for instance, exist for the latter only In the next class may be put such conveniences as ramps and steps, returning walls, Ir dze approaches and waterside construc-tions zenerally, cuy zateways, park enclo-sures, towers for beacons or bells, clocks and sandrals, bandstands and pavilions, which present an even more natural appeal for artists treatment. Then there are all the resources of nature, the pluntation of mass and surface, the green of the tapis very with the zew of the parterre, and the sparkle and tinkle of water.

Then come the purely ornamental features, which art and sentiment join hands to add the highest touch of grace to the street poture, varying in a wide range between the boulder bearing an inscription and the trainipal arch or the many figured group. Finally, above all, there is the embellishment of the buildings, private or public, ment of the buildings, private or puone, which line the streets or evenly open spaces, and make or mar them. This phase of the subject is outside the scope of this paper, but I may say that if buildings are to enter into the decorative scheme of the streets they should at least be visible. It is sad to the decorative much of the possible effect of to think how much of the possible effect of fine buildings is never realised on account our long, narrow streets and the rigid adherence to the rectangular block For buildings, as for monuments, a short vista cained by cutting off or turning a street or broadening it into a decorative place is neces-I come from a place which glories the possession of several fine avenues 122 ft wide, giving unusual opportunities for architectural effect. One of them is notable as being the longest street in the world But although running nearly straight for 825 miles, it turns as it crosses another principal avenue, and is faced on the latter by a fine building, which therefore has its full effect. Perhaps I should add in another category those embellishments for which former times give no precedent, which are the most obtru-Eve no precedent, which are the most obtrusive and insistent of all, and from which he most enlightened society has so far been mable to protect itself—the advertisements. I will say only that the State which finds a remedy for this outrageous evil, which renders nugatory all beauty in our streets, deserves a reward equal to that of the man who can are some account to haid. who conquers cancer or typhoid.

There are no rules for designing street features except those applying to other works of art. The book of suggestion is within the aspect of foreign cities and towns, we find an astonish-The book of suggestion is wide open ing variety in the choice of motive, in treatment, and in placing. Every problem of treatment and adjustment has its own special conditions and its own best solution by which the object shall be related most agreeably tests purpose and site and surroundings give it individuality and distinction. To pass about the Grand Boulevards and along the great east-and-west axis of Paris-one of our most common mental promenadesgives a most complete exposition of the sub-ject. We see the monument, the column and obelisk, the architectural setting of and counts, the arentestural setting of setting the property of the fountain and pool, the triumphal arch and the city gate, the decorative avenue backing up to a monument or building, open places of various sorts, the splendid building cubancing and being enhanced by its sur-roudages, the cureful use of the green of autre, the colour of flowers and the flow of vater, the variety of effects of changing angles of view, the terraces and balustrades and ramps and bridges

Even without a culture and love of beauty for its own sake, and basing our plea on a lower plane, we should accomplish more if we could convince our authorities of the money value of civic art. Just as many foreign products command a high price purely for the element of beauty of design in them, so a beautiful street or square or bridge or building or monument raises the value of real estate in the vicinity, while a city which, as a whole, is organised on attractive lines draws people and business enterprises to itself, has its fame carried far and wide by every chance visitor, and recoups itself directly and indirectly for the ontlay many times over. Beauty as an asset convertible into real estate values and tax returns is recognised by most foreign cities not yet sufficiently by ours. As soon as our people realise this they will, of course, hasten to invest in public art.

-

### BRITISH ART AND WAR.

We endoise entirely some very wise cautionary remarks offered by the Connoiseur, in its last issue, which should be We endorse entirely taken to heart by those who may not have seriously considered the possibilities refers to, the occurrence of which would be

disastrons: "Taking one thing with another, the artistic position occupied by England at the beginning of the present war is avalogous to that held by her at the end of the eighteenth century. Her art commands profound respect abroad as well as at home, and in several departments of it--engraving, architecture, and the production of furniture and ceramic ware—she leads the world. This position has been built up during a hundred vents of comparative peace; for though war has occurred, no echoes of the actual fighting have penetrated across the sea to England. Now, as in the great French war, the struggle is raging at our gates; it is straining the resources of the country to the ntmost, and personal as well as national economy is urgently demanded. Unfortunately, one of economies which impose the least selfdenial on the majority is the cessation of the purchase of objects of art. But this, far from conserving the resources of the country. tends in the long run only to diminish them The creation and the conservation of the beautiful together form a vast industry or which both the present and the future commercial success of the nation largely binges. The artists who create art, and the dealers and collectors who accumulate the treasures of the past, originate the artistic taste which governs the design of textiles, pottery and porcelain, metal-work, and the thousand and one wares which are not merely mechanical productions. Weaken and vitiate this source, and the future of half the in-dustries in the country is jeopardised. Something like this actually occurred during the French war, and art to a great extent became commercialised; its destinies fell from the control of the people who practised and understood it, into the hands of people who were more interested in making it a pecuniary success. One can see exemplified in the transfer of publishing from the hands of engravers to indivi-duals who had no technical knowledge of the art. The brothers Boydell, the brothers Ward, Green, Smith, and many other of the leading eighteenth-century printsellers, were all practical engravers. The close of the war saw their businesses either extinct The result was a or belonging to laymen. general decline in the art of engraving. A similar decline may be traced in almost every other bunch tof art and artistic industry

The taste of the country, which reached its nadir in the mid Victorian epoch, has gradually been restored to its former level, with immense benefit to the trade of the country.

Now, unless we are careful, there is every danger of another decline in English taste The people who lerve devoted their lives to adequate support, or else, as in the case of their predecessors, their effects will be brought to a standstill, and, when the war is over, a new generation arise ignorant ground was friable.

of artistic tradition and deficient in artistic

In some respects the situation is far more perilous than before, because, though the country was exhausted in the Napoleonic struggle. it was less affected than any other of the great nations. At the present time the wealthiest country in the world is not taking part in the struggle at all, and unless the British public can give support to art dealers, it seems likely that a large portion of the treasures they have accumulated will transferred to the other side of the Atlantic.

It must be remembered that money spent in British art is not money lost to the country, but remains here to the benefit of the whole nation. Artists and art dealers have more than borne their share in the great struggle, and many have already given their lives for their country, and it is the country's duty and for the country's profit to help those who remain in the task of upholding the cause of English culture.

THE DRITISH FIRE PREVENTION COM-MITTEE.

The activities of the British Fire Prevention

Committee during the first week of the war have naturally been redoubled, and the have naturally been redoubled, and the ordinary public, which it is only fair to admit has been praiseworthily vigilant, and prompt to suppress outbreaks, is perhaps hardly fully aware of the debt it owes to this voluntary association of willing workers

Specially, amongst much else, the Committee has devoted itself to:-

1. Fire Survey Force,-At the outbreak of war the Committee formed a special fire survey force of 100 surveyors to undertake at short notice any fire surveys required by the Government in an honorary capacity. Over 900 establishments taken over for war emergenev gancy work all over the country were surveyed by this force with a total of over 40,000 beds. Latterly re-surveys are made in cases of special fire risk.

2. Fire Warnings.—The Committee's warning service embraced the preparation and free issue of a large number of public "fire warnings" in connection with the war emergency, disseminated by the Committee in the form of posters, circular letters, or as notices. The special classes of risk under review, for which special notices were issued, embraced hospitals, convalescent homes, refugee hostels, schools, billets, factories, and farms, for each of which a separate form of warning was prepared, whilst air craft hazards were dealt with on general lines. The total issue of posters. on general lines. The total issue of posters, etc., exceeds 200,000.

3. Fire Service Force.—The Committee's

special fire service force, organised by the Committee at the outbreak of the war, and comprising ex-fire brigade officers and firemen, was originally brought into such a form as to make 300 firemen readily available for mobilisation in sections within forty-eight hours.

The Arabian lamp designed by the German Emperor for the tomb of Saladin, in Damascus, has been handed over by the German Consul with full ceremony. The Kaiser promised the lamp when he visited Syria in 1893.

Two recent acquisitions by the Trustees of the National Gallery are now on exhibition at Trafalgar Square. They are: (1) Winter at Dordrecht, by Aelbert Cuyp: (2) The Mouth of a River," by Simon de Vlieger, Both were purchased out of the fund bequeathed by Mr. C. E. Mackerell from the Huntingfields Col-

At Ayr Sheriff Court last week William Galloway, architect. Craigie Cottage. Troon, admitted failing to obscure an indoor light in his dwelling. He was only in temporary residence at Troon, and he pleaded ignorance of the regulations, as he had only recently returned from Africa. A fine of £5 was imposed posed.

In a paper by Mr. Marcel Gillieaux on Linung shafts with concrete Z-blocks," read-last Saturday before the Mining Institute of Scotland, it was urged that in addition to being cheap, this method saved a temporary lining, and enabled the shaft fittings to be placed in their permanent position as the sinking pro-ceeded. From a technical standpoint, the method gave a perfectly homogeneous lining, and was really essential in all cases where the

known by the Museum authorities, who, therefore, can afford no account worth repeating here. Mr. Scott Lawson, who made this capital sheet of drawings reproduced today, also says he is unable to supply more information than that afforded by his measured details, which he has been good enough to place at our disposal for illustration in the BUILDING NEWS.

THE BUTCHERS' ROW.

"The Shambles" at York, also well known as "The Butchers' Row," forms one of the most antique and picturesque parts of of the most antique and picturesque parts of the city. Domesday records tell that the Earl of Morton had fourteen mansions (holdings) and two stalls in the Butchery and the Church of St Crux The latter stood at the south end of the Shambles, otherwise Butcher's Row. The fabric of this church was only removed for the widening of the Pavement some twenty years ago. Architecturally, however, the huilding was considered one of the facet churches in the city A small the finest churches in the city. A small mission-house has been built near the site of this ancient structure, and in this new building some few remains from St. Crux are preserved, including the tomb and helmet of the Duke of Northumberland, who was be-headed on the Pavement, August, 1572. Gordon Hemm.

to the width of the pavement. All the windows are new, but are placed as nearly as possible in the original window openings. The timbers, internally as well as externally, have been exposed, and present several fine ceilings, the timbers everywhere being found in an excellent state of preservation and of good scantlings. Very little timber was required for the restoration and replacements, and this, when needed, was provided from premises pulled down at the rear. The roof premises pulled down at the rear. The roof was stripped of modern tiles laid some years ago, and replaced by old tiles. Messis, John Harris and Sons, of Stratford-on-Avon, carried out the work, under the supervision of Mr. Francis W. B. Yorke, Licentiate R.I.B.A., 3. New Street, Birmingham, and Stratford-on-Avon. We give a plan and sketch sections, with elevation of the rear frontage in Henley Street, and detail of new timber gate. timber gate.

### WAREHOUSE AND WORKS FOR MESSRS. WEINBERG, CHEETHAM, MANCHESTER.

These works, which are for the manufacture of waterproof clothing, cover an area of about 6,000 sq. yards on the ground floor. The building has a basement under half this exbuilding has a basement under half this extent. The internor of the premises throughout is faced with glazed brick, the ceiling is covered with fibrous plaster slabs, and lighted with patent steel bar glazing. The construction of the roof is on the Warren girder principle and fireproof throughout. The external elevation will be faced with best red pressed brick and stone-faced Rnabou terra-cotta. The offices and showrooms on the ground and first flows in the control cont the ground and first floors in the central part the ground and first floors in the central part of the front of the building will be laborately treated in marble, wood-block floors, oak xoodwork, and patent cement panelling. The lighting is by electricity in every part, and the heating by low-pressure out water. The works will accommodate about 11.05 workpeople. Mr. Joseph Sunget, of St. Ann's Square, Manchester, is the architect

#### Calamo. Currente

Sir Philip Burne-Jones calls attention- not. we think, without reason-to an incident which occurred last Sunday at Westminster Abhey. He says: "To-day is Sunday, and two American friends of mine, husband and wife, who are spending a very short time in England before going to the Continent, were anxious to see the Abbey and pass a few quiet moments of prayer beneath its roof They drove down to Westminster, arriving at the Abbey doors at 4.30. Here they were met by a crowd of people emerging from afternoon service, who were being literally driven forth by a verger, whose anxiety to clear the House of God of any possible human visitor or worshipper, unless they could make it convenient to arrive at some officially set hour, left a very painful impression upon my friends. They remarked, as they walked away from the closed gates, 'Well, this will not happen in France.' I am glad to think that it will not. There, as elsewhere throughout the whole world, the doors of the Sanctuary are open wide to ail men and at all hours for contemplation or silent prayer, but we in England forbid it. As an Englishman I felt bitterly ashamed that my guests, who had come 3,000 miles to worship quietly in our national church. should have been denied this privilege-the right of the humblest in any country but this -and my shame and indignation are my excuse for this letter."

Last Wednesday the Manchester City Council had yet another discussion on the question of the reinstatement of two of the three members of the City Surveyor's staff who were dismissed some time ago. At the previous meeting of the Council a report of the Town Hall Committee was referred back. Last Wednesday Mr. T Cook referred to a minute of the Town Hall Committee meeting of July 21, and asked for the full record of the proceedings to be read. This record included a letter from the City Surveyor, who stated that he had been considering how he could find employment for the two men. There was no work in his own department, but he proposed, with the sauction of the Rivers Committee, to employ them upon the completion of a survey of a culvert. This work would not last long, however, and at present he did not know what further work he could offer these two men. This was followed at the meeting of the committee by a resolution that the letter be entered on the minutes, and that the two men be retained in the service of the committee. Mr. Cook moved an amendment to the effect that notice should be given to the two men to terminate their service with the Corporation. He denied the truth of reports that the City Surveyor had engaged assistants for survey work since the beginming of the war, and said that if these men were reinstated the discipline of the department would be seriously affected. Alderman Wilson seconded the amendment, and Alderman Frowde said that the Rivers Commuttee did not desire the services of the men. After a speech from Mr. Ross Clyne in support of reinstatement, Mr. Cook's amendment was carried by a large majority.

The justices at Beaconsfield took a novel course in a private street, works case which came before them on Friday, July 30. By 1911 a building estate had been extensively developed in the district of the Beacons-

field Urban District Council, several of a roads needed making up, and a new servwas required for draining another part () the district. The compal laid a main sewer ! from 19 to 30 ft deep, along one of the roads through this estate, and subsequently verved notices on the Irontagers requiring them to make up and light and provide separate sur [40, 20] face water and soil sewers for the roals, in cluding the one with the deep level sewer under it. Certain frontagers served notices of objection under Section 7 of the Act of 1892 on the ground that the works proposed, which were estimated to cost 29s, per foot lineal, were unreasonable. The justices, after long deliberation in private, found that the scheme was unreasonably costly, and litimated that in their opinion the connect should exercise their power under Section 15. They adjourned the case sine die for the council to bring up an amended scheme, the cost of which to the frontagers was not to exceed 25s, per foot lineal.

The Westminster Guardians have set an excellent example to other local authorities. Recently they disposed of a workhouse, and they have decided to invest £15,000 of the amount obtained in the War Loan. In the metropolitan boroughs we know most about, the curious thing is that as pauperism decreases-as it has done all London over these three years past—the poor-rates go up and the salaries of the officials in the workhouses increase! At the moment able-bodied pauperism is next door to a criminal offence, and rigid and early inquiry into its prevalence is imperative.

It is understood, so says the Scotsman, that as a result of a meeting held on Tues day week of the Edinburgh Gladstone Memorial Committee (it now consists of the Lord Provost, Sir M. Mitchell Thomson, and Sir James Guthrie) a representation has been sent to the London Gladstone Committee, of which it is understood Lord Crewe is still chairman, recommending that the Scottish Gladstone Memorial should be placed in Saughton Park. So probably the statue will not go to Glasgow after all.

An examination of the stones set in the processional cross and the cross on the altar at St. Panl's Church, Worthing, according to the Daily Chronicle, has revealed them to be of German manufacture and imitation colouring. The fact that such stones at the present time should be allowed to remain in important ornaments of the church so storred the patriotic feelings of the worshippers, says the vicar, that he has obtained consent to replace the unitation stones with stones of British origin and natural colouring A good example, need for following which we for is not lacking elsewhere!

We have so often urged the newssay of the orientation of roads and buildings, if that primal necessity of health direct similarity is to be secured, that we have real with pleasure the paper by M. Rey in the last issue of the Lown Planning Review. which it is pointed out that the lat inde any given local ty same essent all factor of the problem, and on about which too iffle is known by many ord tests. A scheme or checking consumption among boot and shee workers is described in the first report of the Medical Research Committee, advance copies of which have been received at Northampton, which, with Leicester, had been made an area for special 1131111111 investigation. The committee suggest the provision of a new type of sanatorium, specially adapted to the needs of the operaspecially adapted to the needs of the opera-tives. The report discusses all the possible factors which may account for the high mor-tality at present existing in the trade, and core ades with a recommendation for a modified form of sanatorium treatment by where a contection with the ordinary form where it contraction with the ordinary form of treatment, work at trade union rate of wages may be provided for the consumptive mentative, both in the earliest stage of the disease and during the period of conversation. The report also deals with measures desirable in the interests of the factory, it is suggests the horough of Northampton as suitable for the interior of such a scheme.

The area of wood paying in the city of Pris the area of wood paying in the city of Eristed maintained by the Corporation, according to the Webrin Daily Pers, is 241,947 superficial yards, independent of the portion report idle by the Trainways Company. The length of wood paved carriage-way is 15, m les. During the summer season 1914 the water used for street watering was 51.255 bads or 24.554.900 gallons, as compared with 72.425 bads and 21.727.500 gallons distributed in 1915. The tatal length of macidam roads in 1915. The total length of microdan roads that do for the initiation of dust missince during the summer of 1914 was 1464 index. The same materials were employed as on former occasions, and the result, it is stated. ontinues to prove satisfactory. The total ength or streets planted with trees is 253 miles, and the total number of trees is 5.353. The amount of refuse destroyed at the two destructors was 55,508 tons, and the amount of cluker obtained was about 36 per cent., or a total of 19,330 tens. The quantity of material obtained from the Abbot's Leigh quarry during the twelve months was 32,376 tons, and the value of the material delivered at the waterside depots was £7,799. The number of cattle troughs in the city is twenty, and the consumption of water in the year amounted to 3.370,003 gallons.

Russia. according to the Paper-Maker. will be the world's timber-yard of the future. for no less than two-fifths of the empire is forest land. In European Russia the forests extend over an area of about 345,000,000 acres, of which 214,000,000 acres belong to the State. 58,000,000 acres to individuals, 26,000,000 ecres to peasants, and 11,000,000 acres to the Crown, leaving 6,000,000 acres under diverse ownerships. In Asiatic Russia most of the forest land belongs to the State. A conservative estimate puts it at 636,000,000 acres. a low figure when it is remembered that much of the land is as yet unexplored. Thus vast reaches of the timber belt in the Yakutsk Pro-Thus vast vince, bordering on the Arctic, which have never known the foot of civilised man, are roughly reckoned at 90,000,000 acres. The same is true of the vast forest areas in Eastern Siberia. It is safe to say that two-thirds of the timber land in the Russian Empire lies between the Urals and the Pacific. Of the total 636,000,000 acres owned by the State, 239,500,000 acres are being worked directly by the Government, with a yield of about 3 NOTICE cubic feet of timber, producing gress receipts of \$2,100,000.

To iscilitate the widening of Water Lane. the Old Mill House of the Society of Apothe-caries is about to be demolished. In anticipacaries is about to be demolished. In anticipa-tion of the change, the Society has already caused a building to be erected at the rear, and the contents of the doomed structure have been transferred. The Old Mill House is one been transferred. The Old Mill House is one of several buildings which, though belonging to the Society, and adjacent to the Holl, are not part of the Holl itself. Its removal, we are glad to learn from the City Press, will in no way inman the quaint beauty of Apothe caries' Holl. On the ground floor of the Old Mill House were to be seen until a few weeks ago three large mills for the grinding of behalf of the subscribers.

drugs, and they were worked by cogged wheels, such as were used before the era of steam power. Many of the windows contain the or ginal crown glass, with bull's eves; and the well from which the mill was supplied remains. The work of the Society in the preparation and manufacture of pure, reliable drugs will in no way be hindered by the de molition, for the transfer to the new factory is already complete, and it is really a case of pulling down a detelict building.

Wednesbury Town Council have been placed in an awkward predicament by the retusal of the Local Government Board to sanc tion a loan for the election of twenty-four workmen's dwellings, as proposed in a housthe election of twenty-four ing scheme adopted by the Corporation. Prior to the decision of the department having been received the work had been placed in hand. and an alternative application was accordingly made for the department to permit the Council to purchase eight houses which have been everted by the contractors. They have, however, now received a reply which is to the effect that the Board regret that, owing to the prevailing conditions, they are unable to sanc tion the application.

Many of our readers are beneficially familiar with the Handbook of Patent Law. by W. P. Thompson, F.C.S. M. F.M. E. (London: Stevens and Sons, Ltd., 113. Chancery Lane), of which a sixteenth edition is now issued. The author, who is the head of the well-known firm of patent agents of London, Liverpool, and Bradford. has had a wide and lengthy experience, and it is well utilised in this volume, which is it is well utilised in this volume, which is really a new book, and not a mere revision of former editions. It covers nearly 250 pages, and deads exhaustively with all a patentee should know, and the ignorance of which often sends him blindfold to the Patent Office, or leaves him in the hands of some of the inequalified and unchartered patent agents, and the result is an invalid or incomplete patent, or the missing of opportunities abroad which might have increased his returns a hundredfold. Many readers who are not inventors will do well to buy this book, especially manufacturers and others likely to have business dealings with inven-They not infrequently do as much as or more than the inventor to render the fruit of his brain and their help remunerative, and it is as much to their interest as his to know what a patent really is, and how its advantages may be best secured and

It has been decided to recruit a further 200 men for Imperial Service only in the 1st London (City of London) Sanitary Company. R.A.M.C., which belongs to the Territorial R.A.M.C. This company has recruited over 800 Force. men since the commencement of the war. Most of them are now on active service with the various Expeditionary Forces, and, according to Major Fremlin, have earned the approval of all who know their work. Applications for enlistment are invited from sanitary inspectors, surveyors, chemists, builders. carpenters, and plumbers, and others interested in sanitation, and should be made to the Commanding Officer, Room B 6, Duke of York's Headquarters, Chelsea, up to four o'clock in the afternoon, except on Saturdays, when the latest hour is one o'clock. Candidates should be between 19 and 38 years

The Trustees of the National Gailery have accepted for the nation the gift of M. Egide Rombany's great statue, the "Premier Rombaux's great statue, the "Premier Matin," offered by a body of subscribers This masterpiece, which is still on view at the Royal Academy, won general praise, and we expressed our hopes that it would remain in England. A committee was formed, with Sh W. Goscombe John, R.A., Mr. P. Y. Cameron, A.R.A., and Mr. H. Hughes-Stanton, A.R.A., as the executive, and an appeal was made to the public who speedily contributed the semigrodes of the semi-

In organising this year's Liverpool Angum, the same Exhibition of pictures, to be opened on October 9. Mr. Pibdin and his staff have had to make up six weeks' leaway consequent up on the delay arising through the Art Committee's original decision to abandon the exhibition, and the revival of the scheme under work is now well in hand. The response to invitations for important pictures has been good, and uninvited applications are as numerous as ever. A feature of special interest, in view of the war, will be the Belgian philanthropic auspices. section, representative of some of the best Flemish art of the nineteenth and twentieth centuries. The Art Union will again identify centuries. itself with the exhibition, and on this occasion the Board of Trade have agreed to the Umer giving 10 per cent. of the net proceeds to the Red Cross Fund, to which, in accordance with the offer made to the Corporation, the proceeds from admissions to the exhibition will also be devoted.

At the Newcastle Lit, and rum, and Monday night, Professor Louis W. Sambon, M.D., F.Z.S., of the London School of delivered a lecture out Tropical Medicine, delivered a lecture of "The part played by animals in the dissemination of epidemics." Professor Samhor semination of epidemics." Professor Sambon said if we compared the sanitary conditions of our time with those of the Mid-Be Age: we should find that the general death rate had declined considerably in many of our large towns, notwithstanding the great increas of the urban population. But this striking picture must not blind us to the fact that our sanitation is still very imperfect, and, as a rule, unpardonably neglected. Our sanitation was far behind that of the wonderful ancients. By references to classical authorities, the lecturer showed that most of the discoveries of modern times were anticipated by the ancients. The greatest anticipated by the ancients. The greatest advance ever achieved in medicine was the establishment of the parasitic theory of diseases. We know now that diseases are caused, either directly or indirectly, by living organisms that prey upon our tissues and disorganism them. That theory was surmised by the ancients. Professor Sumbon dwelt in detail on the terrible part the black rat plays in the dissemination of disease. He confessed that it was practically impossible to exterminate the rat, but he sug gested various measures by which the effect. of its mischievous activities might he avoided.

# PROFESSIONAL AND TRADE SOCIETIES.

BRITISH ARCH.EOLOGICAL ASSO. CIATHON.—After sixty years the British Archæologial Association will hold their annual congress in the Isle of Wight. It will extend over four days, from the 18th to the 21st inst., inclusive. On the Wednesday evening there will be a reception by the Mayor of Ryde, and the President. Mr. Charles E. Keyser, will deliver his presidential ARCH.EOLOGICAL Keyser, will deliver his presidential ress. On the following day the Associa-E. Keyser, will deriver his production will hold a joint meeting with the Hampshire Field Club and Archeological Society, and visit Carisbrooke Castle and Church, and at Newport the Grammar School and St. Thomas's Church, in the last of which Princes Fligalisth daughter of Charles I., is cess Elizabeth, daughter of Charles I., is buried. Friday will be spent first in visiting Brading Church and inspecting the Roman villa near by, and in motoring to different points of interest in the island; while on the last day the visits will include Quarr Abbey, Arreton Church, and Manor Heuse, and the church at Newchurch, portions of which date back to the twelith century.

KENT ARCHÆOLOGICAL SOCIETY.-There have been no excursions this year, but after the annual business meeting at Canterbury on July 29 the members, about fifty in number, adjourned to St. Angustine's College, where the Rev. R. U. Pouts explained the recent discoveries. They had found, he the recent discoveries. They had found, he made were removed to the recent discoveries. They had found, he said, the north aisle or portions of the original church which Ethelbert and St. Augustine built. This was the portions of St. Gregory, and presumably there was on the other side, beneath a building which served as the wash house of the Kent and Canterbury Hospital. Builders, of a mobil farm. The report was Corporation, whose service he paned in 1-95

or works needs to give particular heed to instructions; for the whole building and occupants when complete constitute in truth a kind of machine, whereof the workers are the motile organs and the structure the framing wherein motion takes place. He should either very carefully study the particular methods of work or manufacture, or listen very attentively to the instructions of his clients. In work of this nature the planner is naturally very much under direct dictation by men having the special business "at their finger Rightly, workers are under careful protection of the State, and, consequently. special Acts greatly affect planning. The

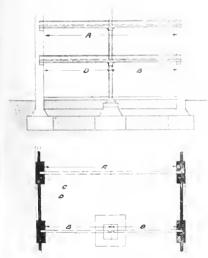

FIG. 1.

whole proposition in factory planning is commercial; generally the greatest floor area for the least money. It is not so much what will look well, architecturally, but what will work well, facilitating maximum will work well, facilitating maximum.

VARIOUS SYSTEMS OF FACTORY BUILDING.

The architect about to plan a factory or works needs to give narticular heed to plan a factory able difference in the cost of steelwork, in studied by building brick walls on the cost of steelwork, in studied by building brick walls on the cost of steelwork. the case of heavily loaded floors. As a viding steel roof trusses. The alcant rule, in factory planning, with multiple of reinforced concrete constructs it is an a floors to carry heavy loads, increase of total apparent in buildings of several states support area, within reason, reduces costs. since large spans involve great increase of method of factory structure is that weight of metal in girders. Moreover, we should, if engaged on work immediately to steel roofs and enclosure of sheet galvibe carried out, remember the trying times mised iron, such as has been often used in which we now live. The building trade for power houses and for miscellane is is depressed, business firms are, especially where engaged with constructional steelwork, operating under great difficulties, inpart owing to the enormous demand for steel for war purposes. Planily, we cannot bridge a great yord with any kind of chance girler, but we may, where spans are moderate, and well within the outside size of stock rolled joists, find it possible to get some quite suitable section other than that we might in preference select. Thus, by a judicious reduction of span, considerably a judicious reduction of span, considerably economising in first cost of the building, we not only save engineers' work at a time of extreme stress and pressure, but may get delivery of sections where others may be practically unobtainable. The designer of a building requiring mach steel must at the present time keep quite an open mind as to the sections he will use. Bearing, too, on this question, is the matter of type of support, for while cast columns need patterns, since we can seldem hope to find anything of this nature suitable in stock, stanchion construction permits of cutting from stock lengths; and here, again, we may, in what is practically a famine time for steelwork, find, if not exactly the sec tion preferred, something that will well answer the purpose. In architects' work at the present time the brightest field is perhaps factory and works construction and addition, so that it may be useful to point out how a little revision of details of proposed construction may facilitate progress

with the work.

The choice of general type of building

The cheapest and most quickly elected light steel sections for vertico posts. The industries, and this type is suitable where there is some argency but not great enough to demand temporary wood framing. Various inciproof substitutes have of late years been produced as sur-stitutes for galvanised iron which, under the best conditions, is very short ived. Steel joists for posts spaced in bir each

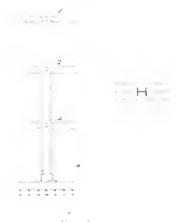

Fig. 2.

roof truss, with a fs f so farth lighted, and with suitable a f so the gard walling enel street ffer the cost and cheapest method where despated in a first cheapest method. tion is important.

Taking the relinary substitute is steen

but what will work well, facilitating maximum production at least cost, after duly satisfying all demands of central and local authorities and by-laws.

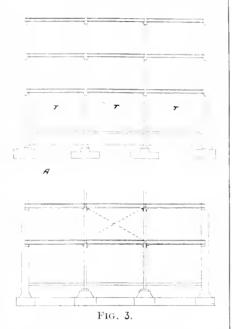

The factory planning which is demanded of the architect is a maximum of works accommodation for money outlaid; the greatest area for practical work with the least obstruction; but the cutting down of total area of supports is not always in harmony with economy in first cost. Large spans add to expense of construction. To economise we need moderate spans and more supports, so that although the general demand is for as much unobstructed floor space as possible, unless it is considered worth while to secure floor-area free from obstructing pillars, the centre supports must be provided in harmony with basic

tem of onlying that gives a "tree. T, not present in the case of mixed construction. An i it cannot be said that ferro-concrete is a suitable for very many storys, if there are many pasts, for the deduction from fl : dreas at the lower storys be-c nos a scrious matter. It is not yet shown that ferr concrete is a nostrum - a remove for all shortcomings in older leading construction methods. The truth seems to be that for ferre-concrete the work regumes to be suitable. For certain special constructions, as for certain in derate-steried factories, where no d ubt nothing is more satisfactory; and it seems certain that a plain shell of reinforced concrete may be put up in the neighbourhood of 4d, per cubic foot, even lower figures having been suggested. What the immediate future of in block ferro-concrete for works, factories, and wareh uses may be is not easy to forecast. all is self in that an innovation, apparently superseding all types, actually does so, but it takes its fitting place, competitive and older methods surviving. Neither the ancient bricks and-mortar method, nor the modern steel structure, has been yet swept away. Rushed-up jobs and factories are often required in a fever of haste, and for such ferro-concrete is not suitable, for its ultimate strength s a matter of time, whereas we may load up girlers and steel joists as soon as they are bolted in position and all ready below for taking up the load. There is always this obvious benefit in pure steel construction. Again, it should in fairness be noted that to compare the area required by a reinforced concrete pillar with a rolled steel stanchion of. say. If section, the area taken up by this latter is not the net metal or its cross section in square inches, but the rectangle cf its flange by web and flange depth. Viewing matters in this light, the solid steel column is the greatest saver of valuable floor area.

For the attachment of brackets carrying power shafting, undoubted advantages and great convenience attend genuine steel-frame building. Where the factory is heavily equipped with machines and new ones frequently added the girders and stanchious may be anywhere drilled for new brackets. In the immediate future there would appear opportunity for all varieties of factory construction. Although we may not adopt ferro-concrete en bloc. yet the roofs, bressnmmers, stairs, and landings are often most suitably made of concrete, reinforced, and the success of the system of reinforcing has stimulated ingenuity in detail, and a stratum of steel netting, or a few steel rods, is now good practice where not long since we should have put an array of relatively heavy steel joisting. For fire-resisting warehouse and factory construction, simple steel reinforced concrete is highly suitable.

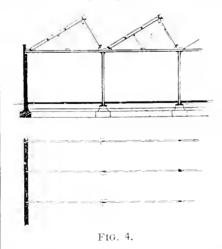

In London, the substantial building is an affair of brick-and-mortar exteriors and steel interiors, steel struc-ture preferably being used as isolated peints of support. In this class of work economy results from careful repetition, planning in equal bays, and equal spans, the work of construction required in the shops, and the work of the erection on the job being the roby considerably simplified; again, as tending to reduce the first cost of fatery building, by using as many equal-sizel equal-section, similarly connected structions and joists as possible thois securing expeditions machining and drilling one reterection. Further, in the matter of standhion design, the use of a single setting such as a 10 in, by 6 in, R > J = esistently from the upper floor downways with extra rivetel plates to

give increased power as the load increases in the lower floors, as in Fig. 2, simplifies lesign and tends to keep down costs. At the present time, it may be that this prac-tice, which has often been carried from basement through many stories, may not be so conveniently practical as some diversity in sizes and sections. We had best take what we can get. Timber is dear, and steel-construction is hindered by the war. Those having immediate concern with works and factory buildings might

do worse than first carefully ascertain how the war has affected steel constructional engineering, and find how, before designing and calculating, what are the most available sections.

The work of the designer of factory or warehouse for heavy loads, to be construct-1 with all regard to first cost, whether in concrete, steel, or of ordinary building construction, commences, or early nocessitates, calculations for stresses and loads. The simplest procedure is to start

from the roof and work downwards, bringing out the net weight of superimposed mass at the several points of support, as 1, 2, 3 m Fig. 2, at each floor level, finding the ultimate stress on the lowest stanchions (at 4), piers or columns, and so the pressure upon foundations at 5. In genuine steel framing tied throughout and having all independent of brick and stone walling, the total load is the sum of that upon each lowermost stanchion, and for calculations such construction is the simplest. The whole load is the construction itself plus the legally imposed, or the "superimposed" load—as so many cwt

per super. foot-all as detailed in the Building Acts, where is allotted a certain ratio of slenderness for steel stanchions. Economy is promoted by getting evenly-distribatel loads upon stanchions and pillars. Very manderably more metal is required in steel props, not having balanced loading, or, in other words, not having equal stresses all round the axis of the prop. Not many architects to able themselves with the details of steelwork in these days of close specialisation; but there accrues a certain advantage in making a careful estimate of loads and stresses whilst plans are in embryo; for, if such plans be made finished drawings, the sizes of girders, joists, and stanchions or pillars will be e creetly drawn from the first, and in the dispatch and urgency with which such buildings will be erected, the draughtscreetly drawn from the first, and in the man's work will be facilitated.

The weight calculations when brought to ground level give the load on brick piers or on stanchion base-plates (4, Fig. 2) and knowing, or assuming, the nature of the soil and its nower to sustain weight, the area of concrete or grillage foundations (as Fig. 2) can be determined. Unless, therefore, we start away and determine all stresses from the time when the plans are settled and right for completion, we cannot do more than hazard suitable foundation design. In genuine steel-framed buildings a special importance attaches to stanchion foundations. The whole stability of such structures is based on unyielding points of support. If any point sinks, a series of eccentric stressing occurs which may be disastrous. The whole theory of homogeneous steel building construction is based on efficient "tie." We, and our is based on efficient "tie." We, and our forefathers, have so long in ordinary building construction completely ignored this that we may be apt to miss its importance where a great array of joists and stanchions is concerned.

If we have drawn out a works plan with sections, showing all accessory features, and have decided the thickness of walls in error lance with by-laws, the work of making these calculations may be commenced. and this needs reference to the controlling building Acts. The correct time for mak these calculations is when the general plans are wholly approved by the client.

>000< HYDRATED LIME AND ORDINARY LIME.

By E. W. LAZELL, Ph.D.\*

Everyone is familiar with the fact that when quicklime is treated with water a violent action takes place, the lumps of lime break up, heat is generated, steam is given off, and after the action is completed a paste or putty remains—the ordinary lime putty used for mortar. The fact that quicklime has changed its form from dry lumps to a wet paste and that heat has been generated prove that a chemical reaction has taken place, or that quicklime has combined chemically with that quicklime has combined chemical, water. It is a scientific fact that when any chemical change or reaction occurs exact arounds of the material are involved. In the chemical change which takes place when lime is quenched with water definite amounts of lime and water are involved; in slaking lime an exact amount of lime unites with an exact quantity of water, forming an exact amount of hydrated lime, and it differs from the original quicklime, and if water is present to satisfy the calcium oxide (lime), then a dry powder will remain. This powder is hydrated lime, and it differs from the original quicklime and from pulverised lime in its behaviour towards water. When water is added to hydrated lime no heat is generated, nor does When water is added to the material slake, thus indicating that water has no further chemical action on the hydrate.

What is Hydrated Lime?-Hydrated lime of commerce is the dry powder resulting from \* Chemical Engineer, Portland, Ore. From Concrete-Cement Age.

and Water. - In the foregoing, emphasis has been laid upon the fact that precise amounts of lime and water react chemically. In other words, 1 lb. of lime requires a certain definite amount of water to form a perfect hydrate If too little water is used in quenching the lime in the process of manufacture, the lime will be burned in slaking, and free lime, or lime which is not combined with water, will the present in the hydrate, rendering the material unsound. Plaster made from such hydrated lime will later pop and pit, due to the gradual slaking of the free lime; the mortar made from such unsound hydrate generally works tough and non-plastic. The free, uncombined lime when present to any considerable extent will dry out the mortar, rapidly decreasing its strength and causing it to crumble. Free lime in hydrated lime is a dangerous ingredient, and one which will always give trouble.

If too much water is used in the preparation of hydrate the material will be damp and wet, rendering it difficult to handle.

Obsolete Methods of Manufacture.-In the past three methods were used to produce

hydrated lime :-

(1) Small pieces of lime were placed in a basket and immersed in water for a few minutes, until slaking began, when they were withdrawn and placed in a heap in order to conserve the heat and prevent the vapour; the material swelled, cracked, and became reduced to a dry powder.

(2) Lumps of lime were placed in a heap and wetted at intervals until the mass was equally moistened throughout. The slaking

proceeded as in the first instance.

(3) Small pieces of lime were exposed to the air for a number of months, and the lime absorbed both water and carbon dioxide from the atmosphere, falling to a dry powder. powder consisted of dry sub-carbonate of lime containing about 10 per cent, to 11 per cent of water.

These three methods of dry-slaking lime were crude, and unless the greatest care was exercised the resulting product contained particles of unslaked lime. The hydrate pro-duced by these methods was generally short and possessed poor sand-carrying capacity; in fact, hydrated lime made by any of the above methods was suitable for use in agriculture only, and such hydrate should not be confounded with hydrated lime manufactured by modern methods.

Modern Methods of Manufacture.-The modern method of manufacturing hydrate de pends upon the addition of a definite amount of water to a predetermined amount of lime By no other method is it possible to produce hydrate which will contain sufficient combined water to satisfy the demands of the calcium oxide (lime) present. It is of the utmost importance that all the calcium oxide be in combination with water, otherwise the hydrate will be unsound and unsuitable for building uses. That all the lime be satisfied with water will be insisted upon in any specification which may be drawn for hydrated line to be used in the building trade, and it vital for each manufacturer to recognise that the formation of hydrated lime involves a chemical change requiring the presence of exact amounts of lime and water. Since the process is chemical, it requires the same careful supervision as any other chemical process -such as the manufacture of Portland cement. The production and use of hydrated lime have been more retarded by the manufacture of only partly hydrated lime than from all other causes. Any method of manufacturing hydrated lime continually to produce a perfect product must be based upon weighing the lime used and measuring the

amount of water added.

Advantages of Hydrated Lime from the Standpoint of the Manufacturer. One of the great difficulties in connection with the manufacture of lime is the perishable quality of the Lump lime cannot be stored for any length of time without deteriorations, thus making the operation of the plant dependent upon the season and the whims of direct their energies of g this line.

the treatment of lime with sufficient water to satisfy the chemical requirements of all the calcium oxide.

Necessity for Exact Proportions of Lame

The uneventues of operation results in a high unit cost. Since hydrated line can be stored in bins in a mainer similar to cement, it is possible to anke the operation of the plant more nearly continuous, thereby introducing economies in the manufacture and reducing the cost. The manufacture of hydrate also means a more extended market, as hydrated lime can be used for a number of purposes for which quicklime is not suitable.

Advantages to the Dealer. Three principal advantages to the dealer are the case handling, less deterioration of the product and the freedom from hire risk. These three facts alone should convince the dealer that it is more economical to handle hydrated lime.

Use of Hydrated Lime In general it may be stated that hydrated lime is suitable for any use in the building trade to which lump lime can be put, and it would appear that as soon as the material comes into general use, its advantages will be found to far out weigh any disadvantages. The use of hydrated lime does away with the necessity of slaking lime to a paste, thus saying the space required for the slaking bed as well as the labour of slakmg. By the use of hydrate it is possible to proportion the mortar so as to have exact quantities present, since this form of lime comes into the market in convenient packages of known weight. This point is always appreciated by the architect and engineer, as is a well-known fact when lump lime is used as much sand as possible is added, with the result that the mortar is lean and possesses little strength.

Mortar Made from Hydrate Stronger than that Made from Slaked Lime.-In June, 1910 the writer presented the results obtained from an extended series of tests on mortars made from both hydrated lime and lump lime to the American Society for Testing Materials. One of the most important conclusions drawn from these investigations was that the mortar produced from hydrated lime was stronger than that produced from the corresponding lump lime slaked to a paste. This conclusion was to be expected, since it is possible to manufacture hydrated lime by mechanical means under good chemical control which is more thoroughly slaked than it is possible to slake lump lime on the job.

Practically all those who have investigated the strength of lime mortars have recom-mended the use of hydrated lime in place of hmp line In Bulletin No. 50 of the U.S. Bureau of Standards the following statement "The proportion of impurities in s made: hydrated lime is generally less than in the lime from which it is made. In building operations hydrated lime may be used for any purpose in place of lump lime, with precisely purpose in place of rump time, with precisely similar results. The consumer must pay the freight on a large amount of water, but the time and labour required for the slaking are eliminated, and there is no danger of spoiling it with the labour requirement of spoiling it either by burning or incomplete slaking For all building purposes hydrated lime is to be preferred to lump lime. By its use the time and labour involved in slaking may be saved, and the experience of the labourer is eliminated as a factor in the problem.

If the use of hydrated lime in the building trade is to be increased, this can be broug'st about only by the manufacturers of hydrate preparing and marketing only such material a is sound and contains no free lime. an increasing demand for hydrate for use v concrete to render the material more plastic and dense. Hydrated lime can be advantage only used in all cement plaster and stuce to make them work smoothly and give a mericle plaster and stuces. pleasing colour. In all these uses the sound pleasing corour. In an these uses the sound-ness of the hydrate is the paramount require-ment. No one would think of using unsound-cement—why, then, should they expect to use unseuml hydrate?

The market for hydrated lime is present, and a concerted action in the part of the lime manufacturers to exercise the care necessary manufacturers to exercise the care necessary to make a flor newly hydrated lime will re-sult in a more extended use of the material lit is to be laped that the manufacturers will

The materials used varied a good deal. For mst once, the Innerval II tells of wood plastered on the outside, with some portions of brick, the ar latesture being in Renais-

sai e style. The Department of Agriculture and Commerce is the same style and finish, in three steries, but is of brick covered with plaster. The Tokyo Prefectural Building is of brick faced with stone. The Bank of Japan, one of the finest buildings in Tokyo, is all of granite, the style being Italian Renaissance. The Tokyo Engineering Codege is in Gothic style and constructed of brick with grey stone facings. These two buildings are regarded as masterpieces of Japanese architecture during the Meiji cra.

The third period of foreign architecture in Japan may be said to extend from the year 1895 to the year 1905. During this period there was a marked development of skill among native architects, with a tendency to independence and originality.  $-\Theta_{\Pi\Theta}$  et most typical buildings of this time is the Mitsui Bank, which was planned by Dr. Yokokawa in 1902, and the Imperial Crown Prince's Palace at Akasaka by Dr. Katayama The Mitsui Bank building is of in 1807. The Mitsui Bank building is of yellow brick on a steel frame, the first steel frame in Japan, Dr. Yokokawa being one of the first Japanese architects to go and make a study of steel in architecture.
It is in Renaissance style. The Akasaka
Palace is in the style of Lonis XIV., with steel frame, filled with brick, and stone outside. The design was t famous palace at Versailles. taken from the

From the year 1905 onwards a new period be said to have begun in Japanese use Western architecture. From this time our native architects began to display some degree of self-consciousness. They had by this time taken in and dirested the achievements of the great architects of the world, and telt a freedom that enabled them to go on without restraint to produce something of their own. They were no longer beholden The development of resources to models. for building materials also had something to do with the improvement in architectura designs, especially the employment of reinforced concrete in wall construction. Most of the new buildings of this period are frames filled with reinforced concrete. There seems to be no special thought given to new styles or designs, the weight of consideration being confined to new materials of construc-Styles of architecture in this period are marked by Austrian and German influence, mixed with Japanese ideas. The new gate in front of the Imperial University, which was completed in 1912, marks this period of conflicting ideals. It is a mixture of iron, stone and brick; foreign materials worked up into Japanese style, the design being by a Japanese architect named Yama guchi, the suggestion coming from Baron guchi, the suggestion contained the institution. It will long stand as a monument to those who made desperate efforts to depart from established models. The Metropolitan Police Burean, built after plans drawn by Drs. Tatsuna and Fuknoka in 1911, as well as the Red Cross Society building by Dr. Tsumaki in 1912, not to mention the beautiful Mitsun building by Dr. Yokogawa in 1911, are all representative of the fourth period of Western architecture in Japan.

The Metropolitan Police Bureau is a modified Renaissance style, revealing many native ideas. It is 270 it, by 258 ft., with a central dome and tower rising 100 ft. The Red Cross Society's building near Shiba Park is in German Renaissance style, of brown brick faced with stone, the frame being steel. The new Mitsni building is also in Renaissance style with steel frame, but the design shows American influence. It is a six-storied office building, the first one after the American manner.

It will be inferred from what has been said that the Meiji era was one of initation and study of Western architecture; while the Ta sho era promises to be a period of originality and remarkable development, combining the best in various western comprises with designs of purely Japanese evolution. Every year sees large new buildings being erected in Tokyo for business purposes, their forests of steel, with men like mites of above over them, reminding one of what is distantly seen in any progressive Western cuty. Jopan Magazine

## LENGTH OF PORTLAND CEMENT KHINS

Edison Paient 802.631 Held Void.

A report of an appeal to the U.S. Carcuit Court of Appeals from the District Court of the United States for the Southern District of New York is reported in the Optical carcitic of the United States Patent Office of August 5. It is of some interest this side, as dealing with what is or what is not novel in the construction of Portland cement kilns. The action was brought by Edison et al. against the American Portland Cement Works. The following is the text of the pudgment delivered by Judge Coxe, the Circuit Judge:

At the time application was filed, December 5, 1902, Portland cement was produced by burning a mixture of cement, rock, and linestone in long rotary kilns lined with firebrick and maintained at a slight angle, the heat being produced by the combustion of pulverised coal. A stack was connected at the upper end of the kiln to permit the escape of smoke. These kilns for some years prior to 1902 had been of the standard length of about sixty feet with an internal diameter of about five feet. The patentee admits that longer kilns had been suggested for the dry process, but he asserts:—

"I am not aware that such kilns have been practically utilised or any advantages discovered therewith over the standard sixtyfoot kilns"

The specification contains seven pages of description, but it is thought that the only important improvement suggested or claimed is the lengthening of the kiln without proportionately increasing its diameter. This is the idea which is constantly asserting itself in the specification and the claims.

Claim 2 will sufficiently describe the allege I

nvention. It is as follows :-

"A cement burning apparatus for dry material, comprising a tubular kiln, upward of one hundred feet in length and more than twelve times the internal diameter thereof, means for rotating the same, means for creating a combustion zone within the kiln near its lower end, and means for introducing cement material into the kiln at its upper and substantially as set footh."

end, substantially as set forth."

The kiln must be upwards of one hundred feet in length, and, as Judge Holt points out, a kiln half an inch more than one hundred feet would infringe and a kiln half an inch less than one hundred feet would not infringe. The record shows kilns in the prior art over one hundred feet in length, and, as before stated, the patentee admits that kilns over sixty feet have been suggested, though he is "not aware that such kilns have been practically utilised."

There is a dispute on the facts regarding these prior kilns, and therefore we find it immecessary to discuss them, for, in the view we take of the situation, it may be conceded that Edison was the first to make a kiln over one hundred feet in length. The question s. Did it require an exercise of the inventive faculties to do this? Was it not rather an n provement due to the natural evolution of the art? It was not an improvement which a poor man could attempt. The experiments and the structures necessary to make the experiments successfully would involve a considerable outlay of money which would make t impossible for him to test his theories, no matter how implicitly he might believe in them. The skilled mechanic, with years of experience and unlimited resources at his command, could make the experiments and ularge the kiln to meet the increasing de nand for Portland cement.

The great demand for this product in recent years, which has steadily increased, rented the necessity for larger kilns. As this demand grew, the kilns were increased in length from fifteen feet by progressive additions until at the date of the patent here were many kilns sixty feet in length No one pretended that it required invention to do this. It was a mere matter of construction. In the same way the stone-crushers were made larger as the demand for good roads became insistent, the oil-tanks increased in size with the increase of petroleum,

and elevator-bins bins grew larger with the increased traffic in corn and wheat. We are not at all convinced that any better or different result is reached by the long kiln than by the short kiln. They both produce equally good cement, and the only real difference is the one whileh occurs as a matter of courseviz., that a large machine will produce more product than a small one. But it did not require invention to make the machine longer or larger so long as the only result is to produce a larger output. As pointed ont by the trial judge, if mere elongation be patentable. then each builder as he added an additional foot to the original fifteen-foot machine would have been entitled to a patent. But it is argued that a better result is obtained by the patented kiln because the increased from the upper end of the kiln down to the point of the combustion enabled the mixture in the calcining zone to be subjected to a longer application of heat, thus driving out the carbon dioxid before the combustion zone is reached. We agree with Judge Holt in thinking that the relative operation of these zones depends largely upon the method adopted by the operator. Judge Holt says :-

"The evidence satisfies me that in kilns of all sizes whether the action in the calcining zone overlaps the action in the combustion zone depends very largely upon the operation of the kiln. The operator can introduce at will a longer or shorter blast; he can revolve the kiln more slowly or more rapidly; he can feed into the kiln a larger or smaller amount of cement material; and it depends largely upon the manner in which the kiln is operated whether the calcining process is substantially completed before the material is subjected to the heat in the combustion zone, and the best results obtained

nerally."

It is true that Edison made a longer step than any one person before him, but others were bound to reach the advanced position, although more time might have elapsed before

that consummation was reached.

In short, we are convinced that the enlargement of the kiln was sure to come sooner or later, as the growth of the business demanded. With the increase in length would come the proper increase in diameter and the other necessary changes which any skilled mechanic would know how to make. We find it unnecessary to add further to the opinion of the district judge.

The decree is affirmed with costs.

# THE LONGEST RACK-RAILROAD IN THE WORLD.

A prime favourite among American tourists this year is the ascent of Pike's Peak, in Colorado. One train leaves the lower terminus late in the afternoon and reaches the summit in time to witness the gorgeous spectacle of the setting sun, and, spending the night at the Summit Hotel, one is able to view the equally enthralling dawn of another day. One of the most popular trips is the Sunrise Excursion, which, leaving the lower terminus at midnight, lands the travellers at the crest in time to see the sun creep over the eastern horizon. This special service has developed to such a degree that the entire equipment of the railway has to be impressed to cope with the crowds.

The road is only opened early in June, and its continuous depends on the severe snows which set in early in the fall. On the upper five miles there is frequently snow falling in July, and the road is occasionally blocked, as the snow packs very hard in the upper exposed regions. Clearing out the snow is a difficult operation, as there is no mechanical uppliance which can cope with the frozen layers of snow and ice. Trenches are cut in the solid mass and blocks about nine feet square are transferred to a flat car. The train with a load of blocks runs back along the line until a ravine is reached. The blocks are then slid off the car and sent tumbling down the mountain side.

The rack-rail system in use comprises a rack made of Bessemer steel, with the teeth cut from the solid mass of metal. It is built up in lengths of 80 inches. The rack-track comprises two of these rails laid side by side

centrally between the outer metals, and set about 12 inches apart. The rack-rails are so laid that the joints of each length do not come in line, while the teeth of one is brought opposite the space between two teeth of the other. This secures an even bearing at all times, and is conducive to smooth travelling.

The railway measures a little over 30 miles in length, and the gradient is 844.8 feet per mile, the highest grade being 25 in 100. The sharpest curves are 16 degrees, that is, of a radius of 358 feet. A large portion of the rails and rack are anchored to the solid rock; 146 of these anchors are used throughout its entire length. The highest point on the mountain is 14,147 feet above sea level. The railroad is the longest rack-railroad in the -

### JAPANESE OAK.

Considerable projudice seems to exist in some quarters against Japanese oak on the alleged ground that it shrinks and swells when exposed to rain and sun. The matter has occupied considerable space recently in the Timber Trades Journal. One writer in the last issue says the prejudice is produced not by consumers but by timber mer chants who do not hold stocks of the wood However that may be, we do not know, but the opinion expressed in the columns of our contemporary by Professor Percy Groom. M.A., D.Sc., B.Sc., F.L.S., of the Imperial College of Science and Technology, is probably that which will carry most weight, and we therefore reproduce it. Prof. Groom says :- "Being engaged on an investigation concerning the structure and swelling or shrinkage of timbers, I was interested in the allegation, quoted by your correspondent 'Quercus,' in reference to Japanese oak, that, 'owing to its porous character, it is very liable to swell and shrink when exposed to rain and sun.' On the Continent the view largely prevails that increased porosity decreases swelling and shrinkage. This view is not justified when applied to utterly different kinds of woods, but is generally, if not always, correct when applied to different samples of the same kind. It would, therefore, be of interest to know of any case what soever in opposition to this last statement. It is to be presumed that the idea promulgated in the letter of 'Quercus' is that the numerous pores allow the easy entrance and exit of water, and thus readily lead to considerable changes of volume. Such an assumption would be entirely premature, as the 'nores' (vessels) of the only heart would (vessels) of the oak heart wood pores are plugged with obstructive bodies, which oppose powerful resistance to the pa-sage of water through the wood. Quite another matter is the tacit assumption that Japanese oak has greater porosity than other commer-cial oaks. This character is gauged by the dry weight of the wood, and in the absence of numerous weighings I can only express a doubt as to whether the average porosity of Japanese exceeds that of other commercial

The last "News Sheet" of the Bribery and The last "News Sheet" of the Bribery and Secret Commissions Prevention Lengue, Incorporated, obtainable at 9, Queen Street Place, E.C., contains, among other interesting matter, a report of the recent Military Court of Inquiry into the conduct of the British Empire Committee and its relations with Mr. Devereux and his Hutting Contract.

Devereux and his Hutting Contract.

The Public Health Committee reported to the last meeting of the Aberdeen Town Council that they had before them a letter from the Local Government Board in regard to the erection of a tuberculosis sanatorium, stating that if the local authority had not already acquired a site, they should postpone proceedings for that purpose. If the local authority had acquired a site, but had not accepted any contract for the erection of the buildings on the site, they should not enter into any undertaking that would commit them to further capital expenditure, and should postpone building operations. Where, however, contracts had been entered into for the whole or part of the work, the above restrictions would not apply. work, the above restrictions would not apply. It was stated that the council had not made any arrangements for acquiring a site or erecting a sanatorium.

### ZOITAHZAES DEPRECALED,

Discretion at the annual general meet of the North Eastern Centre of the Sandar. Inspectors Association, in Leeds last Saturday, revealed a wide divergence of opinion day, revealed a wide divergence of opinion day to the atomic of the Local Government Floard, which emphisised the necessity for account.

economy.

Mr. Anderson, Muldleshrough expressed the open on that in the immediate raturathere would not be much progress in the stamping out of tracerculosis. For one thing, he said, the flower of our manhood was away at the front, whist another disadvantage was that the Government had talen all the sanatoria they could by their hands upon for the use of wounded soldiers, and those who required treatment in such institutions were Laving to go back to the dark hovels and in

santary areas.

Then, too, there was a wave of economy with country, "We are told, passing over the country, "We are told, said the speaker, "to do nothing but what is absolutely necessary; not to repair dilapi as absorately necessary; but to repair duaph dated property, nor to put the owners to this and that expense. The Local Government Board tell you that perhaps not in so many words, but local committées de not neglect

to impress that upon you.

Mr. Cass, of Hull, deprecated the Local Government Board supporting that idea. "I dread to think." he said, "what the result will be when our men, strained in nerve and muscle, come back from the front to insani tary homes.

Some of the speakers expressed surprise Some of the speakers expressed so page that the Local Government Board circular should have been interpreted in this way. Mr. Hailstones, of Birstall, declared that the Board stated distinctly that in the matter

of musances and for purposes of health ex-

penditure should go on.

Mr. J. C. Dawes (chief sanitary inspector at Keighley), who read a paper on the inflat ence of applied sanitary science on the incredence of tuberculosis, remarked that what ever else might be said about the Germans they knew how to treat the class of people who were balatually dirty and a danger to the community. These people were sen-tenced to do servenging work for a short period, and the scavenging badge was the hadge of disgrace. As it was a German method, there might be some difficulty in obtaining its establishment in this country. but he thought it might be adopted, perhaps some modified form, with advantage. Mr. T. Pridgin Teale, of Leeds, who pre-

solid over the meeting, was re-elected presi-dent of the Centre --

The Vienna Town Council has decided to

The Vienna Town Council has decided to employ women as city scavengers. About three fourths of the men employed on this work have been drafted into the ranks, and a further depletion of their ranks is impending. The foundation work has been started for the new theatre which the St. Denis Theatre Co., Limited, are going to erect on St. Denis Street, Montreal, at a cost of 300,000 dols. The archivests at Mesrs, Barett, Blackader, red Wichster, of Montreal, and the contractors Mesrs. Necross Bros. Co., Limited, Montreal. The building is to be 205 ft, by 110 ft. in dimensions, of brick and steel construction. At the last meeting of the Uppingham

In dimensions, of brick and steel construction.

At the last meeting of the Uppingham Rural District Council it was reported that notices served from 1912 to the end of 1914 in respect to improvements being made to some sixty properties under the Housing Act had not been complied with. Several of the houses were alsolutely past repair, and there were in signs whatever that the owners would, whether in a position to do so or not, carry out the extensive alterations or reconstruction of these cost uses.

The Damharton Building Society intend to

### PROFESSIONAL AND TRADE SOCIETIES.

EAST RIDING ANTIQUARIAN SOCIETY The second excursion of the sammer session of the East Riding Antiquation Society was held on Tuesday week. Landesborough Londesborough was first visited. The Rev Arthur A R Gill, addressing the members, said he did not intend to enter into the opestion whether Londesborough was the ancient Delgovitia, but certainly a portion of a Roman road was visible at the bottom of the lake in Londesborough Park when the cater was drained off some twenty years ago. This was probably part of the road from Malton to the Humber. Londesborough may also have been the site of the summer palace of the Kings of Northumbria and the scene the preaching of St. Paulinus to King win in the beginning of the 7th century. Lendesborough came into the possess on of the Clifford family by the marriage of Margaret Bromflete, the daughter and hencess of Lord Vesey, to Lord Clifford, generally known as "Butcher Clifford." to have slain the Duke of Rutland after the battle of Wakefield in 1460. The interesting brass to this Lady Margaret Clifford, who after the death of her first hushand married Sir Lancelot Threlkeld, and was buried in Londesborough Church, shown. She was the mother of the Shepherd Earl, though it is not known where he is buried, but his wanderings had given us per-haps the finest lyric that Wordsworth ever Londesborough remained in the Clifford family till the failure of the male line by the death of Henry, fifth Earl of Cumberland, in 1645, when it passed to the second Earl of Cork and first of Burlington by the marriage of a daughter. From the Boyles it passed by the marriage of a daughter in 1748 to the Cavendishes, till it was sold by the sixth Duke of Devonshire to George Hudson, the railway king, and was finally purchased by Lord Londesborough. The park was laid out by Richard Boyle, the third Earl of Burlington, the patron and friend of Pope. The old Hall was pulled down in 1819, and only some vaults remain. The two lower stages of the western tower of the church are Early English. On the whole the church may be said to be Early English with later additions and alterations The chancel, the burial-place of the Burlingtons, was visited. There are hung four funeral banners of the Burlingtons and two funeral helmets. The very fine Norman south nave door, with its sundial and Saxon cross, was admired. Tea was kindly provided by the rector, the Rev. A. G. and Mrs. Bazshaw, and afterwards Burnby was visited, where Mr. Gill spoke on the history of the par sh and church, in which he said he had in belief that Burnby was the site of the great battle of Brunaburgh. The west door of the church is Norman, and the little bell turnet has apparently some genuine old Norman work recast in modern form. There are three very large and fine sedilia, which are said to have come from the neighbouring Augustinian Priory of Warter. The plain circular Norman font, with its later inscription, was admired. On the floor of the sanctuary is a stone dated 1676, to the memory oi Major Ralph Waterhouse: non potuit mors peremit " Death with his dart took him away

Whom sword nor cannon could once slay. Would any know the reason why? Both one and other all must die."

by a window on the north side of the chancel is a bit of old glass, evidently a crest,

NATIONAL FEDERATION OF BUILD ING TRADE EMPLOYERS -In our report last week, on page 167, it was stupidly stated that the 69th half-yearly report recorded a further decrease in membership. It is some consolation for having to correct this error

to interest them when they made an excur-August 11. Mr. Harry Gill said that the earliest written reference to the church was in the Taxation Roll of Pope Nicholas IV., but there was unmistakable architectural evidence that part of the present work was executed at least 100 years earlier. This evidence was to be found in the lower part of the rubble walling, which was of skerry or water-stone, obtained most probably from the Mapperley hills. Windows indicated 13th Century work or as early even as the reigns of Richard I. or John. During the reign of Edward III. (1327-1377), village churches throughout the land were enlarged or rebuilt to meet the needs of the more elaborate ritual then in vogue. Bridgford Church was not pulled down, but was transformed by the addition of larger windows and the introduction of a rood screen and loft and other internal stone altar, built into the The adornments. eastern wall and destroyed at the Reforma tion, was replaced in Elizabeth's reign by an oak Communion table. This was still in use in the side chapel, and the church also possessed a paten bearing the hall mark of 1564 5. The crudeness of the figures on the screen set up about 1380 suggested that the work was that of the village carpenter or This was what made the church mason. particularly interesting-that it was not built under monastic influence or by a trained band of itinerant craftsmen, but by village workmen under the direction of the squire. Speaking of the effigy known as the "stone man," which has now found a resting-place in the new morning chapel, Mr. Gill said that beyond the fact that at the close of the 18th century the figure was set upright to mark the boundary of the manor, near the junction of Melton Road and Loughborough Road, its history was unknown. There was strong presumptive evidence that it was intended to represent Sir Robert Luterell. lord of the manor early in the 14th century whose widow was known to have presented an acolyte to the rectory in 1315. Exter-nally, the charm of the old church was now somewhat overshadowed, but interest might still be aroused by the tracery of the eastern windows, the grotesque gargoyles, the carved ctone in the south face of the tower, and a collection of 18th-century headstones in the graveyard, obtained from the Swithland slate quarries in Leicestershire. After tea the company proceeded to St. Peter's Church, where Mr. Robert Evans, F.R.I.B.A., said it was disappointing to find no mention of the building in Domesday Book, foundation deed of Lenton Priory was the first record we had, in 1100. The south arcade was the oldest portion, and was a fine example of the Early English period, probably about 1100. bably about 1180. There were no signs Norman work, and in the various phases of restoration no Norman remains had been The original stone staircase to the found. old rood loft was one of the most interest-ing features. The north arcade was a much mutilated example of Early English work— probably about the end of the 14th century. The chief damage was caused to it by the erection of galleries, which were removed in 1887. Touching upon the work of restoration, for the completion of which funds are much needed, Mr. Evans remarked that five cenexposure to rain and sun had left its mark upon the tower and spire, but fortunately the men who selected the stone of which it was built did so wisely, and if succeeding generations were alive to their trust we might expect it to remain a landmark for many years to come. Originally the spire was crocketed, but ninety years ago the crockets were sawn off by a mason named Philip Wooten. The apex of the last week, on page 167, it was stupidly stated that the 69th half-yearly report recorded a further decrease in membership. It is some consolation for having to correct this error that in spite of our had times the membership of the Federation is still increasing, as well as the beneficial scope of its activities. NOTTINGHAM AND DERBY ARCHITECTURAL SOCIETY.—The Thorotom is silly at the top of his ladders, including heating a drum and drinking a bottle of alc in the sight of thousands of people on an I Derby Architectural Society, found much in the elder part of the parish church.

In 1825 the cock fell on to the nave roof, K.C., M.A.

the stonework having perished. The presentworks of repair and renewal were long over-due. There was no mortar in the joints of the spire masonry within two inches of the face, and a great many of the joints without any mortar, the rain driving through, with the result that the joints had become very wide through the perishing of the stone. The stonework at the apex, which was cracked and badly weathered, had now been entirely removed and rebuilt in Derbyshire stone of a colour and com-position more closely resembling the original The walls of the tower were about stone. 35 ft. thick at the ringing chamber level, and stones as large as 3 ft. 8 ins. long were used in their construction. The four pinnacles crowning the four angles of the tower evibecame badly decayed a long time ago and were restored, but these in turn became daugerous, and the remains were taken down and placed in the churchyard. The pinnacles that had now been placed in position followed the lines of the and were  $7\frac{1}{2}$  ft. in height. In the tower there was a well-constructed groined ceiling, In the tower and in the centre was a covering on which were depicted the emblems of St. Peter.

ROYAL PHOTOGRAPHIC SOCIETY.-The sixtieth annual exhibition of this society will be held at the Gallery of the Royal Society of British Artists, Suffolk Street, Haymarket, from Monday next, the 23rd inst., till October 2. The exhibition, which is international in character, will be open duly from II a.m. till 6 p.m., and on Tuesdays, Thursdays, and Saturdays till 10 p.m. As in former years, an attractive programme of lantern lectures is arranged to be given Tuesdays, Thursdays, and Saturdays, at 8.30 p.m., as follows:-

Tuesday, August 24.—"Romanesque and othic Doorways," by C. H. Dedman. Chair-

Gothic Doorways," by C. H. Dedman. Chairman—A. Herbett Lisett.
Thursday, August 26.—"A Ramble Round Hampstead, with Historical Notes on the Old Town," illustrated by Paget colour slides, by H. Hardwick. Chairman—F. Martin-Duncan, EDMS

F.R.M.S.
Saturday, August 28.—"A Northern Cathedral." by E. W. Harvey Piper, Hon.M.S.A. Chairman—G. Lamley, F.R.G.S.
Tuesday, August 31.—"How Animals Express Their Feelings," by F. B. Kirkman, Chairman—F. F. Renwick, A.C.G.I., F.C.S.
Thur-day, September 2.—"The Attractions of the London Suburbs," by A. H. Blake, M.A. (All the slides for this lecture will be supplied by the School of London Photography.) Chairman—F. F. Renwick, A.C.G.I., F.C.S.
Saturday, September 4.—"The Romance of

man—F. F. Renwick, A.C.G.I., F.C.S.
Saturday, September 4.—"The Romance of High-speed Photography," by Lieutenant Adolphe Abrahums, R.A.M.C. (Fellowl, B.A., M.D., B.C., M.R.C.S., M.R.C.P. Chairman—W. L. F. Wastell.
Tuesday, September 7.—"Some Ground-nesting Birds." by E. J. Bedford. Chairman—Chas. H. Oakden, F.R.S.A.I.
Thursday, September 9.—"Canterbury Cathedral," by R. P. Howgrave Graham. Chairman—Alvin Langdon Coburn.
Saturday, September 11.—"Huns of the Insect World." by F. Martin-Duncan, F.R.M.S. Chairman—A. Herbert Lisett.

F.R.M.S. Ca.

Insect World." by F. Martin-Duncan, F.R.M.S. Chairman—A. Herbert Lisett. Tuesday, September 14.—"Through the Dolemites to Venice." by Chas. H. E. West. F.S. I. Chairman—Ernest Marriage.
Thursday. September 16.—"Bird-watching with Field Glass and Camera," by Oliver G. Pike, F.Z.S. Chairman—W. L. F. Wastell. Saturday September 18.—"A Loon in London." by W. L. F. Wastell. Chairman—F. T.

by W. L. F. Wastell, Chairman-F. Hollver.

Tuesday, September 21.—"An Hour with the Microscope," by Dr. Geo. H. Rodman, Chair-

man—Alvin Langdon Coburn.

Thursday, Sentember 23.—"Notes from my Indian Diary," by Miss H. R. Levy. Chairman

—D. Cumeron Swan, F.S.A. Scot.
—Saturday, September 25.—"Some Village
Homes and Cots" illustrated with Colour Slides,
by Arthur E. Moyten, Chairman—H. Essenlish Coole, F.B.B.S.

### Calamo. Unrrente

A somewhat curious situation, remailed Irish Builder, has arisen in connection wat the advertisement of the Kingstown Urb Council to architects inviting them to submit their names for appointment in connection with a scheme of working-class dwellings. The temuneration offered was 21 per cent, upon the outlay, no payment whatever to be made in the event of the work being abandoned. The Royal Institute of Architects asked the Council to receive a deputation, who laid their views before the Housing Committee. The Urban Council subsequently revised their terms, offering 5 per cent, upon the first house of a scheme and only 2 per cent, upon the remainder, and promising very vaguely to consider a claim for money expended by the architect, should the scheme be abandoned. The Institute thereupon asked its members not to apply for the position, or if application had already been made to withdraw it. Nevertheless, at the last meeting of the Council it was announced that eleven Irish and eight English applications had been received. At the meeting it was argued that there had been a technical error in connection with the matter by reason of the terms having been decided by the committee and not by the Council. It was therefore decided to adjourn the appointment. It is extremely regrettable that the Council of Kingstown should go out of then way to cut down architects' modest remuneration to such an extent as to debar qualified members of the Institute from submitting their names. It can hardly be supposed that this is likely ultimately to be to the advantage of the ratepayers.

We are now able to confirm the statement we published last week with regard to the acquisition of the Star and Garter Hotel as a permanent home for disabled soldiers and sailors. The Queen has accepted the offer of the Auctioneers' and Estate Agents' Institute, and proposes to hand the gift over to the Red Cross Society if the committee of that society will equip and maintain the building. The property, which cost over £80,000, is being purchased for £21,500. The hotel at present contains about 100 bedrooms and magnificent reception rooms. A feature of the estate is its beautiful terraces, gardens and grounds, facing south-west, and the building is eminently suitable for a permanent home for paralysed and totally disabled soldiers and sailors. The moneys collected will be devoted to the purchase of the property. The necessary alterations, equipment and maintenance, on the handing over of the building by the Queen, will be under taken by the British Red Cross Society, and any sum received in excess of the purchasemoney required will be given to the British Red Cross Society for the above purposes. The annexe will be opened in about three months, but extensive alterations are neces sary to the main building.

The ground floor will accommodate about 135 beds, and it is proposed that these beds (and these beds alone) should be occupied by the absolutely helpless. The reasons for this arrangement are obvious. By means of a series of special exits all the beds can be moved rapidly into the open in the event of fire. Each bed will be provided with large wheels on ball-bearing joints so that a nurse. single-handed, can with ease draw a bed out of the building. By a like arrangement the beds can be taken into the garden over the Thames so that on every suitable occasion the patient can spend some hours in the open The first floor will be given up to dis-

the copy of proceedings of the conflict of the object of the type of orner from a distance their visits will of ne essity be short, unless they seek lodgings in the town. It is proposed that each mai shad have the privilege of neviting a relative r trief. I to stay with him for a week end or | c | | Refer | | C | a | 11 for two or three days. The garden, as s well known, is superbly placed on the steep crest of Petersham Common. It is proposed to make here a Garden City for paralysed so diers. There will be a little street with cottages and bungalows, each with one good room capable of accommodating some four heds. The houses will be warmed and will be occupied by patients the whole year through. The Soldiers' Garden City will accommodate some fifty patients, so that the total number of helpless men who can find a home, either in their hotel or in their village will be about 155. Gifts in money or kind are solicited. The latter, for sale within the London area, may be forwarded direct to Knightsbridge Hall, No. 217, Knightsbridge, which Mr. J. Charlton Humphreys has lent to the Institute for the purpose of warehousing and selling such. Notice of despatch should also be sent to the secretary of the Institute at 34. Russell Square, W.C.

The announcement of the removal of Toynbee Hall from Whitechapel to Poplar is followed by the news that the Passmore Ed ords Settlement in Northern Bloomsbury has become a women's institution. Mrs. Humphrey Ward, the hon, secretary, who an nounces the change, explains that it is due to the urgent demand for the whole-time help if educated women in many social fields. The settlement was a product of the social for es of the early 'nineties, and in the purpose of its founders stood as a concrete symbol of enthusiasm for humanity independent of the support and sanction of orthodoxy. The building was given by our Chair man, the late Mr. J. Passmore Edwards, and was opened in 1897. It stands in Tavistock Place, and the playground covers part of the garden of Tavistock House, the last London residence of Charles Dickens. It was illustrated by us in our issues of August 9, 1895, July 3, 1896, and October 19, 1900, and the architects were Messrs. A. Dunbar Smith and Cecil Brewer, whose designs were selected by Mr. R. Norman Shaw. There Mrs. Ward started her vacation schools for the children of the neighbourhood, which, with the classes for defective children and the play evenings, may be regarded as one of the distinctive contributions made by this the benefit of the artism class settlement to the common stock of the common stock of the artism class service.

## Gur Illustrations.

CHURCH OF ST BARNABAS, NORTH FINCHLEY.

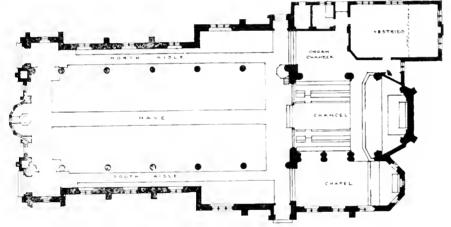

This new church consists of a nave, 94 ft ng and 57 ft, wide; aisles, partly 12 ft are the same corrects of a nave, 94 ft. ag and 37 ft. wide; aisles, partly 12 ft. ale and foartly be ft wide, and of same length of the tive, chancel, of apsulal form at east ad, 43 ft. long and 26 ft. wide; morning hap, 1 40 ft. long and 16 ft. wide; organ see, as a clergy and choir vestries, with adding setest between, so that the two can be made into one large room, for parish meetings, etc. The nave and chancel are of lotty proportions, with tracened elerestory win dow's and open timbered and panelled roofs of archol term, and there are handsome areades with stone preis and richly moulded arches dividing the nave and chancel from the is es and morning chapel. A projecting bartistery and angle turrets, with lorty tracerred windows between, and gabled porches, form the principal features at the west end of church, facing Holden Road. The aisles are more than usually lofty, the wide portions being covered with leaded roots, carried by arched timber principals. The general style of the church follows that known as the "Decorated" period of Mediaval work. The windows and other dressings externally are of Welsian stone, and the walls generally. These dwellings have been erected on are faced with red brick, relieved by stone an island site in Rodney Road, Walbands and gable copangs, and the roofs, where worth, S.E., for persons of the working

Son, contractors, of Dulwich, from the designs of Mr. W. H. Wood, F.R.I.B.A., successor to the late Mr. C. Hodgson Fowler, SA, of Durham and Newcastle-on-Tyne. The plan shows the general lay-out of the building.

### "SEFTON," WEYBRIDGE.

The perspective by Mr. B. A. Poulter shows this house which has recently been erected for W. Shakspeare at Weybridge. building is finished with rough-cast, and the roofs are of dark tiles made by Mr. Warner, of Twyford The external woodwork is of oak. On the west front there is a large balcony and verandah with a fine view over the flat country near Chobham. The windows have iron casements and are filled with leaded lights. Internally the work is very simply treated, the best rooms having stone fireplaces and beamed ceilings. A little decorated plaster work has been introduced. which was executed by Mr. G. P. Bankart. The house is heated throughout by radiators, in addition to fires. The work, including the gardens, has been carried out by Mr. W. G. Tarrant, of Byfleet. Messrs, Tubbs, Messer, and Poulter, of Charing Cross House, Craig Court, Whitehall, S.W., are the architects.

## PEABODY BUILDINGS, RODNEY ROAD, WALWORTH.

CHURCH OF ST. BARNABAS NORTH FINCHLEY. Mr. J. S. ALDER, Architect.

not of lead, are covered with rough red handmade tiles. The inside stonework is of Bath stone. The accommodation provides for 750 persons. The cost has been about £3,600. The architect is Mr. J. S. Alder, of 1, Arundel Street, Strand: and the builders are Messrs. Street, Strand: and the builders are Messrs John Bentley and Sons, of Waltham Abbey We have chosen two photographs of the building showing the interior, and one of these we reproduce to-day. A series of similar views of the church were taken by Mr. Richard Moreland con amore, and as the work of an accomplished amateur photographer his prints are of unusual interest, particularly as no attempt has been made by the artist to tamper with the limitations of the camera, depending instead upon the legitimate 1150 unton hed photography and to the ability of selecting well-composed pictures in the points of view of each particular subject. This pudgment is of the greatest importance, and Mr. Moreland, as a water-colour painter, is singularly successful in this respect, in striking contlast with more pretentions work of the professional photographer.

## ST BARNABAS VICARAGE, DUEWICH

The Lord Bishop of Southwark conducted the office for the benediction of this house, just completed. The building is of red sand faced bricks, with red hand-made tiles on the reof. The doors, window frames, and large boards are of oak. The vicarage is connected to the church by a cloister formed f oak framing filled in with concrete panels of coal, portable washing copper, and gas in I with flat asphalte roof. The work has cooking stove. The living-rooms have the teer arried out by Messrs. Mitchell and latest pattern portable ranges and hot water

The dwellings consist of ten blocks. and are five stories in height. The blocks at the rear of the site are similar in their arrangements to those forming frontage group, as shown on the plan below the view on our double-page plate. The elevations are built of red sand-faced bricks with Luton brick base, artificial stone diessings, and slated roofs. The gates and railings are of wrought iron. Accommodation has been provided for 179 self-contained one-, two-, three-, and four-roomed tenements, each tenement having in addition its own entrance lobby, scullery, and w.c. There has been lobby, scullery, and w.c. There has been provided, free of charge, for the use of the tenants, a detached building, comprising a steam-heated laundry, bath-house, and shelter, occupying the centre of the site. Coal stores are also provided in this detached building where tenants can obtain coal from the Fund at a low rate all the year round. The charge of 1d per week is made for the sheds. All the staircases, w.c.'s, bath-house, and laundry have the walls tiled. Each living from has a dresser and venti-lated meat larder and cupboard as a com-bined fitting, and all the bedrooms have a wardrobe cupbeard. The one-room tenements the provided with both these fittings. Hangspace is provided in addition in a recess ie entrance lobby. In each scullery there in the entrance lobby. is a deep white glazed fireclay sink with teak draining board, coal bunker to take 3 cwt. of coal, portable washing copper, and gas cooking stove. The living rooms have the

supply to scullery sink. The tenants can obtain a constant supply of hot water from a tap arranged in a convenient position in the courtyard. There is store and workshop accommodation for the use of the superin accommonation for the use of the superintendent and porters for doing any small immediate repairs. The buildings are of fire-resisting construction throughout. The lighting is by gas supplied to the tenants through the part of the construction of lighting is by gas supplied to the cenarics through slot meters. Cas is also used for the courtyard lighting. The buildings were designed by Mr. Victor Wilkins, surveyor to the Peabody Donation Fund. The general the Peabody Donation Fund The genera contractors were Messes, W. Cubut and Co 258, Gray's Inn Road, W.C.

## ---OBITUARY

Mr. Frank Bramley, R.A., died on Tuesday, at Hope House, Chalford Hill, aged fifty eight. He was one of the best-known members of the group of artists known as "the Newlyn School." Born near Boston, "the Newtyn School. Born hear boston, he studied at Lincoln and in Antwerp, and began exhibiting at the Academy in 1884. It was four years later that he produced "A Hopeless Dawn," his first popular success. The canvas was bought under the terms of the Chantrey Bequest, and now hangs in the Tate Gallery. From 1885 to 1895 Mr. Bramley worked at Newlyn, near Penzance. In 1900 he settled at Grasmere. Among his best known pictures were "For of Such is the Kingdom of Heaven" (1891) and "While there is Life there is Hope" (1896). He was there is Life there is Hope" elected an Associate of the Royal Academy in 1894 and R.A. in 1911. He was a gold medallist of the French Salon, where he frequently exhibited.

Alfred Usher Soord, the well-known portrait painter, died at his residence, "Cranmere, New Bushey, Herts, on the 10th inst., following an attack of pneumonia.
Born at Sunderland in 1868, Mr. Soord received his early training at the York Institute School of Art, and later studied under Sir H. V. Herkomer at Bushey. He exhibited Academy, the Paris Salon, and in the provinces. The Lost Sheep, perhaps his most popular work, has been reproduced in thousands, both in this country and in America. The reredos in the private chapel at Oxford House, Bethnal Green, was also the work of Mr. Soord.

The Sanitary Inspectors Association will hold its next meeting at Lichfield on Saturday, August 28.

-

Renovations are being carried out at the Presbyterian Church, Ballyclare, under Messrs. Watt, Tulloch, and Fitzsimons, architects, Belfast. The church is to be reopened on Septemfast. ber 5.

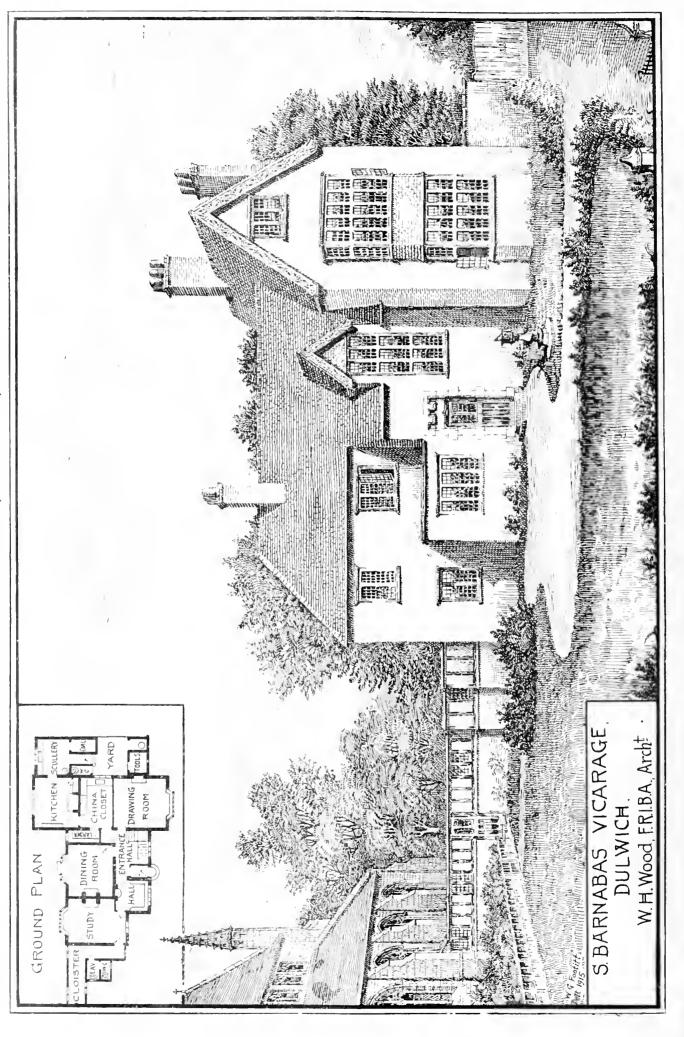

The death is announced of Mr. T. Ellott, borough surveyor of Enniskillen, at the advanced age of eighty-two. Mr. Elliott had been many years connected with Enniskillen. He was a member of the Architectural Association of Ireland since its revival, and was its oldest member.

By request of Coonel Cradock, now at the front, brother to the late Admiral Sir Christopher Cradock, friends and relatives of those who went down with him on H.M.S. "Good who went down with him on H.M.S. "Good Hope" in the battle off Coronel, Chile, are myited to inspect the memorial tablet, designed by Mr. W.S. Weatherby, F.R.I.B.A., which is to be exceeded in the family parish church, in Vorkshire, at 74, Baker Street, W.

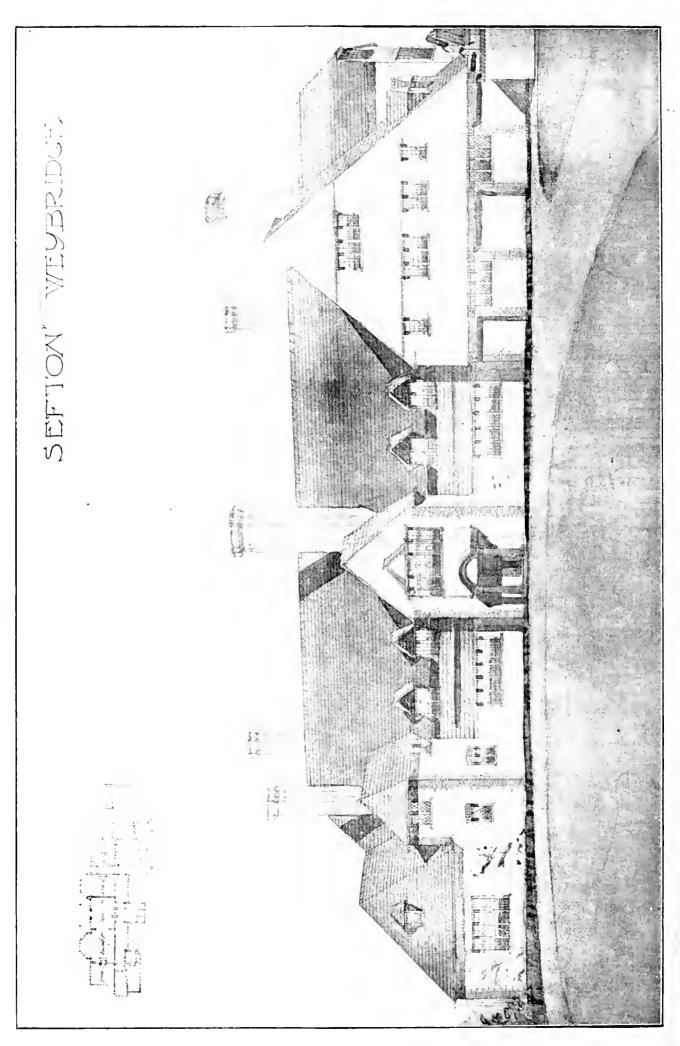

The British Fire Prevention Committee has issued a special Farmers' Fire "Warning," pointing out certain precautions that should be taken by farmers or estate owners, more pointing out certain precautions that should be taken by farmers or estate owners, more narrienlarly in the matter of nicks and stacks. The "Fire Warning" has been published as a small free poster, and may be obtained on written application (with large-size stamped and addressed envelope enclosed) from the Registrar, the British Fire Prevention Committee, 8, Waterloo Place, Pall Mall, London.

mittee, 8. Waterloo Place, Pall Mall. London. The Lord Mayor, aldermen, and catizens of Manchester were fined £3 last Wednesday, on a charge of "neglecting to comply with an order made upon them on September 13, 1899, to abate a nuisance caused by the emission of black smoke from a chimney on their premises," the chimney referred to being at the Mayfield Baths. Store Street. The proceedings were taken by the Sanitary Department of the Corporation.

THE COMMERCIAL UNION ASSURANCE COMPANY, PILGRIM STREET, 3RANCH OFFICE. NEWCASTLE-ON-TYNE.-Messrs. Marshall and Tweedy, Architects.

CO., LTD.'S NEW BRANCH, PIL-GRIM STREET, NEWCASTLE-ON TYNE.

The new branch office for the Commercial nion Assurance Company, which is in course f erection in Pilgrim Street, Newcastle, has een designed by Messrs. Marshall and weedy, architects, 17, Eldon Square, Newastle. The elevation to Pilgrim Street will e Darnley Quarry stone; the base up to round floor sills will be of Aberdeen red ranite. The whole of the facings in areas nd basement are of Lumley white glazed est quality bricks, the rear walls and bles being of white unglazed bricks. The hole of the floors will be of ferro-concrete, nd the surface of same covered with Jarrah ood blocks, the corridors and staircases with arble and terrazzo. An express passenger it, installed by Messrs Waygood, Otis and o., communicates with each floor. The Comercial Union will occupy part of the ground | £100 to £150 a year.

OMMERCIAL UNION ASSURANCE ! floce, and they will have a separate entrance from the street. Their offices will be fitted with oak panelling and handsomely decorated fibrous ceilings. The staff lavatories and cloak rooms are in the basement; owing to the slope of the site from front to back these will be entirely out of the ground, thus avoiding areas. The contract for the foundations has been carried out by Mr. Thos. Lumsden, Jarrow, and the superstructure is now being proceeded with by Mr. Alex. Pringle, of Gates. head. All contracts for steel windows and all interior fittings have been placed. The clerk of works is Mr. Bourn.

> At a meeting of the Downham Urban District Council on Thesday week, it was decided after much discussion to raise the salary of the surveyor (Mr. J. M. Jackson) from £50 to £65 per annum.

PEABODY TRUST BLOCK BUILDINGS, RODNE

## Our Office Table.

Poynter ed M. E Edward er last Thursday Egide Rombaux's tin," to the trustees formally presented M. Estatue. "Le Premier Matin, formally presented at. Egicle combana's statue, "Le Premier Matin," to the trustees of the National Gallery on behalf of the subscribers to the fund in the Sculpture Gallery of the Royal Academy. The gift was accepted on behalf of the trustees of the National Gallery by Lord Plymouth, who announced that it is to be placed in the Tate Gallery M. Rombany was mable to be Gallery. M. Rombanx was unable to be present as he is in Brussels. Sir Edward Poynter said that £865 5s, had been collected for the purchase of the statue in three weeks from 265 subscribers, of whom 150 were artists, and the remainder art lovers and writers on art subjects of all shades of opinion. M. Rombaux had put on his splendid work the modest price of £800, and the remainder of the money subscribed would be given to the fund for the relief of distressed Belgian artists. Sir Edward paid a high tribute to the Belgian school of sculpture and Rombaux in particular. Of "Lee to M. Rombaux in particular. Of "Le Premier Matin" he said:—"It is a work magnificent not only in design and expression, but in that profound and masterly knowledge of the human figure and its capabilities beauty, which is the characteristic of the great masters of the great schools of Greece and Italy; and these qualities it displays in the highest degree, the sense of form being as refined as it is colossal in conception." M. Paul Lambotte, the Belgian Director of Fine Arts, said the gift assumed the character of a symbolic act of homage paid by British artists to Belgian art.

In the spring of 1917 a "Palace of Induswill be opened in which to hold two fares, every spring and autumn, in which will be exhibited the main industries of the Empire. The site chosen is Willesden Green. Forty-four acres of land have been taken, and the buildings will be three times the size of Olympia. There will also be extensive pleasure grounds attached. Only wholesale manufacturers and their agents will be allowed to show their products, and admission to see them will be limited to traders and other possible customers by ticket. Each "Industries of the Empire Fair" will be run on the same lines and for the same object the pushing of trade—as the Leipzig Fair. It will last three weeks, and invitations to visit it will be sent broadcast throughout the Allied and neutral countries. In the summer months it is proposed to hold a show of a more popular kind illustrating the scenery and natural advantages of all the countries in the Empire.

The principal Bavarian Art Societies have issued a joint appeal to the public to sacrifice nartistic copper, brass, and nickel objects for the Fatherland. The circular says: "Intelthe Fatherland. The circular says: interigent public bodies can doubtless find monunents unworthy of the personage or event commemorated, which would yield great quantities of metal which the Army now so reatly needs; and further, cemeteries might acrifice a large number of monuments to uch a sacred purpose." We could very well pare a few here for similar use!

Mr. H. T. Chapman, the county surveyor of Kent, has just published his annual report, rom which it appears that the total length f main roads in Kent under the direct constitution of the control rol of the county council is just over 600 niles. The actual cost of maintenance, tarainting, and improvement work carried out uring the year ended May 31 last. Mr. hapman says, was £158,202 13s. 11d., an in rease in outlay on the previous twelve tonths of £248 8s. Towards this exenditure £38,756 was received in the count year from the Road Board. A total f £54,636 17s. 10d. was expended upon tar ainting, widenings, kerbing, channelling, aving and drainage works, and represented aving and drainage works, and represented 1.0 per mile. The total cost of tar-painting carriageways amounted to £27,053 s. 11d., 942,480 gallons of tar being used, the area treated being approximately 53 milens uperficial yards. There was also 20,224 lilons of tar peed in the receiping of feet. be area treated being approximately  $5\frac{3}{2}$  millons of tar used in the repairing of fooths. The payments for tar alone represented £11,365 7s. 11d., the average price

paid per gallon being 2.7d. The total quanpand per ganon being 2.10. The Boar quantity of material used upon the roads under direct control was 143,404 tons or yards. The direct control was 145,404 tons or yards. The average price per ton for granite macadam, exclusive of haulage, was 11s, 5,47d., as compared with 10s, 11.54d. in the previous year, being an increase of 6.13d. Of the material used 50,962 tons consisted of granite macadam and 26,766 tons of Kentish rag tarred macadam. The cost of supervision, in cluding county surveyor's and clerks salaries, and maintenance of motor cars, was £3,499 13s. 11d., being equal to 2.3 per cent, upon the expenditure of £149,413 4s. 6d. Expenditure on improvements during the year amounted to £27,583 10s, 11d. The total Road Board grants received during the year amounted to £51,316. Mr. Chapman refers to the damage caused to macadam roads by the constant watering carried out by urban authorities, which is most destructive and seriously increases the cost of main-

The Daily Telegraph comments pertinently on some of the complaints about false economy it is receiving. The effect of the war on the building trade is the subject of one correspondent's letter. He recalls the recommendations of the Par liamentary War Savings Committee, mentions in particular the recommendation that "No one should build a house to reside in for himself or herself," "Inferentially," he comments, "it may be assumed that it is quite right to build a house for your friend's occupation, but not for yourself. Be that as it may, the folly of putting forward any suggestion tending to discourage the general public from investing in house-building, when fully appreciated, cannot be too strongly condemned. The building trade employs as many hands as any other trade in the country. Seventy-five per cent. of the money spent on a house is paid for labour. It cannot be suggested that money so spent goes out of the country, and the increased production of dwelling-houses is admittedly one of the great needs of the present day. It is added that if the economy doctrines no doctrines now being inculcated are carried out in their entirety, the result in the building trade will be that "all over the country numbers of men who have been in regular employment for many years will be suddenly thrown out of work."

In their fifth annual report, the Road Board state that during the year ended March 31 last applications were made for £2,001,264, of which £1.541,684, or 77 per cent., was for improvements of road crusts, and £208.190, or 10.4 per cent., for widendiversions, and improvement gradients, curves, and corners. The decrease of £592,541 in the amount applied for was probably due to an intimation given to the highway authorities that the Board were not prepared to continue making grants during the war to the same extent or on the same basis of distribution as in previous years. The receipts credited to the Road Improve-Fund during the year amounted £1.620,974, and the net payments after deducting £93.266 for loans repaid were £1.386.173. Grants amounting to £1.698.884 and loans amounting to £482,418 were made. After the outbreak of war the Board under took at the request of the Army Council to arrange for the construction at the cost of the Council of certain new roads, and to arrange with highway authorities for im provements in public roads, mainly at the cost of the Council, which were required for military purposes. The total estimated cost last-mentioned works was £475,669. of the to which the Army Council contributed £385,070, the Highway Authorities £30.591. and the Road Board £62,008

As one of the useful series of pamphlets entitled "Indication of Houses of Historical Interest in London" the County Council have published a handbook relating to Holywell Priory and the site of the Theatre in Shoreditch, and giving the results of careful in

present

The London County Con, it is partially issued, at 5s net, through Messas P 8 King and Son, Ltd., Vol. 1 of Comparative Municipal Statistics, for 1912-15, giving full particulars regarding the municipal life of sixteen great toxics in the United Kingdom during the years dear tray? The resident of London, Birmingham Liver pool, Manchester, Sheffield, Leeds, Bristo, Newcastle, Cardiff, Swansen, Glagger, Rolfant, or Newcastle, Cardiff, Swansea, Glasger Edinburgh, Dundee, Aberdeen, Belfast, or Dublin can find out just how his city stand-in relation to the others, in the matter of area, population, occupations of the people pamperism, drainage, wages, reta, process paid by the working classes, paras crime education, transvays, gas, water and electricity supplies. An illuminating introduction is contributed by Sir Laurence Gomme tion is contributed by Sir Laurence Gommetill recently elerk to the council. Taking the year under survey, London had to pay 66s, 11.9d, per head for her general municipal services. The six next greatest English towns escaped with an average of about 47s, each. Education cost 8s, 6d, a head more in London that the average for the other six towns: police done by the other six towns: London that the average for the other six towns; police about 4s, 6d, 4 head more. It is shown that there is a slight general increase in the cost of any given service per head as the size of the town increases. There is a tendency for the cost of nearly all services to reach a inimmum in towns of about 90,000 population, though the cost of gas and water services tends to decrease as population increases even above that figure. The cost per head in towns of 250,000 and over considerably exceeds that in towns of fewer than 250,000. The increase of the cost of administration, owing to the size of the towns, is found to be affected by the question of site values

It is stated that the action of the Birker head Corporation in serving notices on the owners and occupiers of Oxton and Caughter respecting a town planning scheme for those areas is not in any way a breach of the policy of "municipal economy during the war. The serving of the notices involved crost of only about £5, but the process served the put pose of preventing a pre-war expenditure cosme £200 being rendered useless. The effect of what has been done is to avoid the possbility of any part of the districts being spoiled by the whim of individual owners pending the making of the contemplated order question at the forthcoming Local Government Board inquiry will be whether or not the Board will allow the Corporation to prepare a scheme of town planning, and no further expense is likely to be incurred until long after the end of the war.

In consequence of the restriction of building th consequence of the restriction of building work by public bodies and the refusal of loans for housing purposes by the Public Works Loans Board, a statistical report has been issued by the National Associated Building Trades Council showing, approximately, the number of men of military and non-military age still likely to be affected by any general stoppage of employment in the building trade. Men nineteen years and overtotal 1,148,869, of whom there are eligible by age for service 865,098. Not eligible by by age for service 865,098, age, 283,771.

The hearing of the charge of mandaighter against Mr. Alexander Montagn Pykemanaging director of the Cambudge Cr. Kinematograph Theatre, Ltd., Chacket Cros-Road, and Mr. Lionel Grant, the backet gineer, was concluded last Friday, at Morborough Street. The charge are so at of fire at the theatre in which a workman named James Powley was burnt to death. It was stated that there was stored at the theatre a ton of old films which had been obtained by Mr. Grant and Mr. Pyke, who were going to supply them to Pathé Frères. At the pre

\_ ven as to the hans to Urant for Los to. Mr Frampt is submitted evidence to justify Mr., d for trial. The Mags state of the first the case is the general against Grant than such that the case is the general against Fyke was a general allowing the film to state. He thought there was a doubt, discipling inder the direction of a judge a\_mst Pa and a joy more the direction or a judge soluble is to whether negligent stering was sufficient to an out-to-ministaughter. Be foodules, the reserved their defence, were committed in  $\tau$  to all bail being allowed as

heigh. before.

P offer of the war has been felt at the R yell Acceptage, as chewhere, but the at tendatices at the summer exhibition, which closed on Saturday night, have, it is said.

A expectations. The customary the customary excessed expectations. The customary I moved adars since, which in normal times mark the opening of the exhibition, were these year abundanced, and the only public function has been the formal presentation to the trustees of the National Gallery of M. Rombany's statue, "Premier Main," for the the trustees of the National Gamery of M. Rombaux's statue, "Prenner Matin," for the nation, which took place on Thursday last in the scrapture gailery. In all 1,926 pictures have been on view this year, compared with rather more than 2,000 last summer. No decision has at present being arrived at as to

se holding at a winter exhibition. The tower of Woolworth Building, New Mak, the highest "sky-scraper" in exist ence, is now seen by night as well as by day in exist An installation of electric projectors renders every architectural detail visible from the roof of the main building to the crow's nest, or lantern, which forms the sixtieth storey. For this purpose 600 lamps, each of 250 watts similar to those used on motor-cars, are used They are of the new gas-filled type, and while some throw their rays upwards from the cables of the roof on to the sides of the tower, others shine down from the tower top itself, these being hidden by an ingenious system of screens. The surmounting lantern system of screens. ontains twenty large lamps giving together 45,000 cand, r power, and by means of diffusing glass and an automatic dimmer, the intensity is constantly varied from a dazzling brilliance to deep red glow.

The all st bel, in the diocese of Liverpool is said by the Liverpeal Daily Post to hang in Roby Couch. The bell is the tenor in Roby Clarch. The bell is the tenor of the old ray of four in Huyton Church, and when the Huyton peal was increased to six, as the bell in question was money with the new hells, the vicar and monise with the new bells." the vicar and churchwardens presented it to Roby, where a tower was built for its accommodation. This was in 1846. The present church dates from 1875. The hell is believed to be the only pro-Refermation bell in the diocese. There is a local tradition that it is affected. There is a lead tradition that it is of Spanish maturia tay but this is erroneous, for it is certainly of Nottingham make, probably by Richard Selvoke. It is 40 in in diameter. It hears the inscription: "See-Bedicte. I S.P., A.D. 1512." The lettering is Gothic, but the numerals are Arabic, a very early use of such there is a realist a very early use of such there is on bells, only two earlier being known to exist in England. The 5 in the date is in the shape of the letter the This form of the numeral was first used by Caxt : in 1480, or thirty-two years before the hell was cast at Nottingham. The 5 induction a number of archaic taste, for the present form of the numeral came into general .- in 1500, and has been commonly employed ever since

In corns to swith a factory building which has just been elected at Windsor, Out., the has jist the discrete at Windsor, Out, the method of floor construction is of more than passing atterest. The walls of the structure are of his at while the floor is of concrete, the fo melata water and the gravel strinkled with it. The height was rused in this manner 1 ft, over the entire area of the hillding, and the opera gravel a very hard fill was secured. On top of this is a covering of maple flooring fastened to sleepers embedded in the concrete.

The suggestion has often been made that steer should be painted before being embedded an concrete, with the idea of protecting the metal from corresion. An investigation this proposal has been conducted by H. A. Gardner, of the Institution of I H. A. Gardner, of the Institution of Indus-trial Research at Washington. One of the resu'ts brought out was the statement that painting may have a distinctly prejudical effect. One serious objection to the use of paint in reinforced-concrete is its interference with the natural adhesion bond between the steel and the concrete. It is true that painted surfaces may be improved by being coated with crushed quartz or fine sand, but even then the presence of the paint is objection able because it is interposed between two materials capable of entering into chemical combination, resulting in the formation of a rust resisting compound which adds very greatly in the efficiency of the hond,

A process of rust-proofing steel and iron is being promoted by Henry C. Baines, engineer and metallurgical chemist of Baines' Metallurgical-Chemical Laboratories, 411, gineer and metallurgical chemist of Baines' Metallurgical-Chemical Laboratories, 411, First Street, Jackson, Mich, The process was developed in 1903, and several English factories were equipped for treating metal parts by it. The treatment consists of boiling the parts to be rust-proofed in a combination of chemicals for from fifty combination of chemicals for from fifty minutes to two hours, depending on the depth of rust-proof coating required and the size and bulk of the articles to be treated. The equipment required consists of an iron tank of a size necessary to accommodate products to be treated, and a few utensils. The tank may be heated by steam or by any other heat. The cost of the treatment, inother heat. The cost of the feeting cluding chemicals, heat and labour, is less than one cent a pound for small articles. averaging five to the pound, and the cost decreases in proportion to the increase of weight and bulk of the material treated. is claimed that iron and steel, both wrought and cast, can be rendered permanently rust resisting. and that it imparts a black matt finish to the metal, thus providing an attractive colouring and rust-proofing in one protive colouring and rust-proofing in one pro-cess. The treatment is well suited for articles to be painted, as it furnishes a ground im-pervious to rust and chemical action, and effectually prevents peeling of paint due to these causes -

The restoration of the North Luffenham parish church tower is entrusted to Mr. S. F. Halliday, of Stamford, and the summit of the spite has been removed preparatory to relauding. building

At the quarterly meeting of the Hants County Conneil, held at Winchester, it was reported by the Education Committee that only five out of thirty-two recommendations for school repairs would be carried out owing to the war, whilst the contracts on painting and re-decorating the schools had been cut down from £3.500 to £1.700. It was, however, decided to build a school for girls and infants in Station fload, Sholing, at an estimated cost of £9.540. £9,540

At Avonmouth the dockers' canteen which has been erected close to the dock gates was opened on Saturday by Lord d'Abernon. The premises, which have cost £5,000 to bui'd, are ramework supporting the walls light steel framework supporting the walls light steel work is fixed, and this is clothed with cement. Work is fixed, and this is couned with semena. The lower part of the wall is covered with steel plates, painted green, to form a dado, waile the upper part and the ceiling are white. The floor is of concrete, and electric light is provided for artificial illumination. The canteen eas been put up in four weeks by Messrs. Perry and Co., Ltd., of Bow, E.

While engaged in making an opening in the wall of Abbotsdene, adjoining Old Friars, Richmond Green, which has been used as a Red mond Green, which has been used as a Red Cross hospital for some mouths, the workmen discovered an old plaster wall, which appears to be part of the interior wall of the Convent to be part of the interior wall of the Convent to be part of the interior wall of the Convent of Observant Friars, which was built in 1499, and this area was flooded with the gravel strinkled with it. The trained in this manner 1 ft. over a repeated until the desired 5.tt. mpl.s ed. The point is made to the freedom of the freedom preservation. A section of the freedom submitted to experts by the local librarian, Mr. Barkas. The convent which was occupied by the Franciscus of the Grey Friars, covered a large are cadicining the old phase, on the site of which Maid of Honour Row and other residences now stand

# Building Intelligence.

BELFAST.- Operations have been commenced in connection with the demolition of the Theatre Royal, the site of which is to be utilised for the erection of a picture house on a large scale. Messrs. Warden, Ltd., the owners of the Theatre Royal, intend to erect a building which will bear comparison with any other structure of the kind in the United Kingdom. The plans have been pre-pared by Mr. Crewe, who designed the Royal Hippodrome, and the contract has been let to Messrs. II. and J. Martin, Ltd., of Belfast. The whole of the ground floor will be devoted to stalls, with upholstered chairs, and there will be a large and well-equipped circle. Accommodation will be provided for an audience of about 1.500. It is expected that the building will be ready about Christmas.

DUBLIN.—Artisans' dwellings for the corporation of Dublin on the Church Street and Beresford Street area are shortly to be commenced by the contractors, Messrs. commenced by the contractors, Messrs. Fraser and Co., Gloucester Street, This scheme involves the clearing away of nearly four acres of slums, which portion of the work has just been finished by the corporation them-The total number of houses to be erected on this area is I46, made up as follows :-24 four-roomed, 94 three-roomed, and 28 two-roomed, the respective frontages being 15 ft., 14 ft. 4 in., and 15 ft. All the streets bounding this scheme are to be considerably widened, and provision has been made for the laying out of a playground, an ornamental shrubbery with fountain in front of the church, sand pits, seats, etc.

GIANTS' CAUSEWAY.—New schools were opened on the 4th inst. at Giants' Cause-The building was designed by Mr. Cluff Williams Ellis, of London. The body of the hall can be divided into two sections, and the gallery can be utilised for social functions. The exterior is enhanced by a spire with a bell, and in the entrance there a marble tablet, and in front of the gallery a bust of the late Lord Macnaghten. The building contract was carried out by Mr. John Carson, Ballymena, and the heating by Messrs. J. McCandless. Ltd., Coleraine,

PLATT BRIDGE,-The new Moss Lane Council School is opened to-day. The arrangement of the schools is on the pavilion principle, the central hall being placed in the centre, with the classrooms radiating therefrom. No classroom has direct access to the central hall. The exterior has been kept severely plain, as, apart from the site suggesting a plain structure, it was considered wise by the committee, in place of useless external ornament, to have an up-to-date interior, with the latest and best sanitary and other fittings. The buildings are faced with "grey" bricks, relieved with red quoins, "grey" bricks, relieved with rea quoing string courses, and bases. The roofs are covered with slates, and the stonework hall is a lofty and well-proportioned room 40 ft. long and 22 ft. 6 in. wide. The school is divided into two departments-mixed and The mixed department provides acinfants. commodation for 250 children, and contains five classrooms—one for 60, three for 50, and one for 40 children. The infants' department provides accommodation for 200 children. The department contains four classrooms one for 60, two for 50, and one for 40 children. In addition, there are head teachers' rooms on the ground floor, and on the upper floor two assistant teachers' rooms. store rooms, and lavatory accommodation. Messrs, Massey Bros., of Enfield Street, Wigan, were the contractors, their sub-contractors were the contractors, their sub-contractors for the work being:—Masonry, Mr. E. Orrell; plumbing, Mr. E. Poppleston; plastering, Messrs, W. and I. Moorby; decorating, Messrs, Dawber and Cheetham, Mr. A. Platt, of Hindley, acted as clerk of works. The schools, the builder's contract for which amounted to £6.050, have been erected from plans and quantities prepared by Mr. Herbert Wade, of Birley Street Blackpool, who, a few years ago, designed the Argyle Street Schools for the council.

COMPETITIONS.

ROYALROYAL SOCIETY OF ARTS.—Mr. Reginald Le Neve Foster has presented the society with a donation of £140 for the pur-ARTS.—Vir pose of founding a prize in commemoration of his father. Mr. Peter Le Neve Foster, who was secretary of the society from 1853 to 1879. The Council have determined to offer the prize for a paper on "Zinc, its Production and Industrial Applications." The prize will The prize will consist of a sun of £10 and the society's silver medal. The paper for which the prizis awarded will be read at one of the ordinary meetings of the society. It is expected that some account will be given of the history of the metal, the sources of its supply, its metal-Inrgy, and the various uses to which it has been, or may be, applied. Intending com-petitors should send in their papers not later than December 31, 1915, to the secretary of the Royal Society of Arts, Adelphi, London, W.C. The paper must be type-written. It may be sent in under the author's name, or under a motto, accompanied by a sealed envelope enclosing the name, as preferred. The judges will be appointed by the Council. The Council reserve the right of withholding the prize or of awarding a smaller prize or smaller prizes, if in the opinion of the judges nothing deserving the full award is sent in.

SCHENLEY PARK, PITTSBURGH. The competition held by the City of Pittsburgh, Pennsylvania, for a design snitable for an entrance to Schenley Park has Leen decided. The first prize (\$500) was awarded decided. The first prize (\$500) was awarded to Messrs. Horace Wells Sellers and H. Bartol Register, architects, Philadelphia; the second prize (\$500), to Mr. Raymond M. Hood, architect, New York; and the third prize (\$100) to Mr. A. F. Brinckerhoff, land-scape architect, New York. There were forty-five separate competitors. The jury of award, was composed as follows. We award was composed as follows:—Mr. Henry Hornbostel, architect; Mr. George S. Davison, civil engineer: and Mr. and Mr. itect. The Berthold Frosch, landscape architect. The jury in their report stated that they regarded the results of this competition as eminently satisfactory, and that the execution of any of the premiated designs would add an artistic civic monument to the deadd an artistic civic monument to the development of Pittsburgh. The submitted designs were generally of two types—one being the more formal, or "plaza" scheme, the other being informal.

WELSH NATIONAL EISTEDDFOD In the competition arranged by the Welsh Eisteddfod for plans for a garden city on a Welsh site for 5,000 inhabitants, with facand railway communications. Henry T. Hare, the assessor, gave first place to Mr. George M'Lean, of Portmadoc. For a design for a chimney-piece, the first place was given to Mr. D. Wynne Thomas, of Bolton.

## WATER SUPPLY AND SANITARY MATTERS.

MATTERS.

MIDSOMER NORTON.—At the last meeting of the Midsomer Norton Rural District Council the Welton Sewage Disposal Works Committee reported that the sewage disposal works at Bath, Warmley, Frome, and Shepton Mallet had been inspected, and after full consideration they recommended that as the site of the recommended that as the site of the recommended. of the present works at Welton was too limited for extension, too near the town, and not readily accessible, the surveyor be instructed readily accessible, the surveyor be instructed to prepare the necessary plans and specifications for a new sewage disposal scheme on the septic system proposed to be constructed on the irrigation land at Old Welton, providing for a population of 6,000 (this being an increase of 50 per cent. of the population now drained to the present works); also to carry out inexpensive appropriate in Glyntian and to obtain pensive experiments in filtration, and to obtain all such particulars and analyses as may required when the period arrives for an application for a loan to be made to the Local Government Board for carrying out the con-struction of the scheme. The report was adopted.

## TRADE NOTES.

The "Boyle" system of ventilation, embracing Boyle's latest patent "air-pump" ventilator and air inlets, has been applied to the Scaorth Palladium Picture Palace, Seaforth, iear Liverpool

### CHIPS.

M. Henry H.  $(x, y) + \lambda = (V_1, y)$  Oxford Road, Bourtenen in a contraction of Germanian Harding, modden and contractors, who and on May 15.  $(x, y) + \lambda = 110_{h}$ 

The death is a nace yord, on the 11th instruct 115. Wallowed Rock, Leytonstone, of M: Wildiam Dawson, WICE, agod seventy live, for turry years engaged to the Leyton Urgan District Council

Active progress is being made with the wick of restoring the massive tower of Northeor Parish Church, Fintune. The tower dates back to 1571, and it is estimated that the restoration will east £1,500

The Sewage Committee of the Bradford Corporation recommend the leasing et 2,000 squaryards of land at Frizinghad for five years to a company specially formed to carry out was contracts. It is pulposed to error temporary buildings on the site.

Messrs, Parker, Thomas, and Ree, architects, of Union Triso Binding, Bastimory, are completing plans for the rew eighteen story Gas Company building to be greefed at the corner of Lexington and Liverty Streets, Pastimore, at a cost of about \$15 (1990).

At the last meeting of the urban distriction of Margam the surveyor reported on the proposed new waterworks at Cilygovid, Duffryn Valley, and it was diedded that before prove dury with the scheme the clerk should communicate with the Margam Estate, with a view of ascertaining if a lease of the site and water rights could be obtained.

Lieut, Arthur Wallace May, of the 2nd Bat-Lieut, Arthur Wallace May, of the 2nd Battalion Durham Light Infantry, and only son of Mr. and Mrs. F. Morley May, recently of Brendon, Westonsuper-Mare, but now of 4, Arlington Mansions, Clefton, has been killed in action. Mr. May, who was only twenty-one years of age, was a member of the firm of May and Hassell, Ltd., timber merchants, Bristol, and was a well-known amateur golfer.

Mr. J. E. Rowlands, assistant architect in Air, J. r., Kowianes, assistant arenited in the Liverpeol city surveyor's office, has de-signed and executed a "roll of honour" on which are the names of the members of the surveyor's staff now serving with the colours. At the top is a Union Jack, and in the centre, as a motive, is the city's coat-of-arms, with a liver at the base. There is an ornamental border of oak leaves.

border of oak brayes.

The late Mrs. Milne, wife of Dr. Thomas Milne, Aberdeen, has bequeathed the following pictures and panels to the Aberdeen Art Gallery, the bequest being subject to the lifers in of Dr. Mi'ne:—"La Serenata," oil painting, by Dauglis Strachan: St. Mark's," oil painting, by Charles Mackie: Angels in Adoration," two gesso panels, by P. Anning Bell; St. John the Baptist," reprediction in sone, after Donatello; an amount wooden panel of the Arms of Aberdeen, from the East Church.

the Arms of Aberdeen, from the East Church.

A stained-glass window has been placed in the west front of St. Mary's Church, Hu'me, by a bequest of the late Mr. William Powell, collector, of Manchester. The theme of the window, which is one of five lights, is based into a very old treatment of the descent of Jesus Christ from Jesse, of which, perhaps, the finest example is that of the east window in Curlis's Cuthedral. There was another in Selbs Abbey before the late disastens fire, and a third example, though nost of the work is modern, is to be found in the east window of Bristol Cathedral. The window at St. Mary's Hulme, has been carried out by Messrs. Warr and Hughes, of London from lengths of M. Thom's Curtis.

At Ram-gite on Samiday Lord Google

Thomas Curtis.

At Ram-gate on Sannday Lord George Hamilton opened the new war hespath. It wounded soldiers. It is situated at Net is Court, and is compaced utily of Net is Court House, and partly of an entire view building, which comprises the main ward, san tary block, opening the transfer singery, and offices. The two building is reasonable with a two building are connected by means of covered passages. The main ward is 120 ft. in length, and add in nature two side wards, each of 35 ft. to whole accommodating fifty beds. Other words accommodating fifty beds. Other words accommodating fifty beds of the convalences. If the stransfer daing is timber framed in linear englishers is with asbestes coment.

A memorial stone has been placed in Hawarden Churchyard on the grave of the late Licent. W. G. Gladstone, Lord Licentension of Flintshire, and M.P. for Kilmarnock Boroughs, who was killed in action in April last. The inscription consists of a scriptural text and the following quotation from the last letter Licent, Gladstone wrote to his mother, the Hon, Mrs. W. H. Gladstone:—"It is not the length of existence that counts, but what is achieved during that existence, however short."

## FACTORY CONSTRUCTION. — LOADS ON STANCHIONS AND GIRDERS.

Part IV. of the London County Council (General Powers) Act, 1909,\* contains regulations controlling the structural design of framed steelwork, such as required in modern factory and workshop construction. The Act enforces roofs and floors of certain minimum strength. So-styled "superimposed" loads must be provided for: thus the total load is that of the structural parts them-selves plus the superimposed loads, as in the case of a warehouse type floor of, say, 2,500 superficial feet, divided by girders into 10 ft. bays. The superimposed load allowance is here 2 cwt. per foot super., so that 5,000 cwt. is to be provided for in addition to the actual weight of flooring itself, which, if it weight 3 cwt. per foot super., adds 1,875 cwt.; or dead and super-imposed load = 6,875 cwt. These rules obviously do not affect ground or one-story buildings which have directly earthborne loads on floor. Load calculations are most conveniently commenced from the roof. The pressures being accumulative, floor below floor, this is the natural way to perform the operation of estimating the stresses put upon and sections necessary for girders, joists, and stanchions.

For roofs, those of greater inclination than 20 degrees with the horizontal are required to be suitable for a superimposed load. "which for this purpose shall be deemed to include wind pressure" of 28 lb. per foot super, measured over the sloping surface, while flat roofs come under the low-pitched rule of 56 lb. per square foot "measured over a horizontal plane."

Roof calculations are thus simple for straightforward plans. Our assumed building of 100 ft. × 25 ft. must allow for dead load-the roof structure itself-and 56 lb. per super, foot. Assuming the roof to weigh the same as a floor, the total load to be carried by the roof girders is 56 + 84 lb., or 140 lb. per foot super. and on each intermediate bay  $\frac{140 \times 2,500}{10}$ 

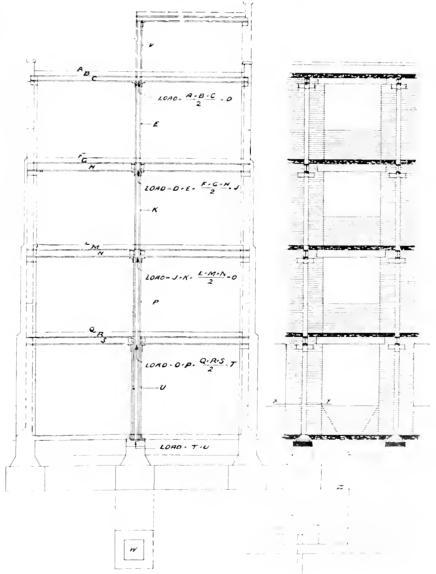

10 =over 312 cwt., say 15½ tons, which is a great deal less than a warehouse type floor load; and on this account the uppermost stanchions in all steel-framed buildings require, by comparison with the appermost floor stanchion, a very light steel section. For practical convenience

We have had in mind a construction free of stanchions, the girders spanning maximum stresses allowed by the by-laws the void of 25 ft. This is a very simple it becomes obvious that the window areas

the scantlings of timber roof trusses, a

larger section than satisfies theory may be

piers. The pressure of numerous ware-house type floors soon accumulates, so that to provide a suitable area of cross section of brick pier to be within the maximum stresses allowed by the by-laws

in making attachment, as in the case of \*Readers will hear in mind, of course, that the new regulations of the London County Council with regard to Reinforced Concrete were passed by the Council on July 6 last and that the Local Government Board is about to fix a date for their coming into operation. They affect nothing stated in this article, but should be carefully studied by all interested. They have been given in our issues of July 14, 21, 28, and August 4.

proposition, for if all doors carry equal on ground floor level must be in some loads the sizes of beauty and their weights part cuitailed, unless we arrange piers per foot ran are similar. So far, thereper root ran are same. On the different sections are required, one for roof and one for all floors. The accumulation of pressures is in the brick wall-

buttress fashion, which might not be con-

se i brokwirk of the piers, etc. or den a case without span-As we have them a case without spans-diving a starche has, the whole load at intermed to have no, where end walls in not a part of the lead is concentrated to the piers, and the stress in the power with a grant will be greatest at the even of the grant flow will be greatest at the even of the grant flow wills, as at X-Y in the diagram. Below this the sitess of the brickwork naturally decreases, as indicated, if there is solid walling to tween the piers, but if, as shown with 9 inch screen walls, the practical method would be to consider the stress decreases only below floor-line. In any case, it is easy to distribute lead on fundations at Z, with economy in con-crete. The Act quoted regulates these pressures as five, eight, and twelve tons er sq. f. t respectively on ordinary, on hard, and on blue brick, all in cement in ctar. Having arranged the wall to be in due accord with regulations as to thick ness in 4,-inch multiples, for height and length, we must cut out the window space, leaving sufficient area to meet the requiremeros : the Act As there are few buildings in which window area is not important, the indications here are plainly for the auxiliary steel stanchions and genuine framed steelwork through-In some cases it might be a fine matter between, say, blue brick and steel, and we need to weigh pros and cons. The "tie of consistent steel construction would appear an attraction in favour of such method of building. There may be something more of mere sentiment often in this than of hard matter of fact. The supplete steel framing is plainly first in respect to tie, but as we endea first in respect to the, but as we emically used to point out in our diagram B. Lig. 5. In our article on "Various Methods of Factory Building," where there are, ranging axially with pier control, two or more stanchious properly v nuected to girders, the tie here is good still, and the auto-stability, as it might be termed. I sound, solid vertical brick walls satisfies all demands merely by providing it carrying dead weight, i.e., omitting, as superfluous, "tie" as it is I by the steel framer; but there understa is obviously a point where we must revert to complete steel designing, basing our reason in the argument that, without such, sky-scripers would be impossible. In other words, where large window area is demanded below, a point is reached in lofty baillings where integral steelwork, with a injecte tie by plate, rivet, and Fin\_, is a necessity.

In the case assumed, and considering

int me is to have where crosswalling describing affects with the calculations. tal of 1,390 tons brings, say, 1330 say 70 tons on each 2 so, begin it. f brickwork to 12'

that a stot wing ways. I need press 3 ft. wide, allowing 7 ft. wind way ds. which, for our assumed ssame a case of four flows four stry warehouse type building, sug The total pressures gosts blue brick as satisfactory, with no pures are hare (1) special call for external small countries. 2) the terst, second, and third Let us double the height. We may then a to the girders, and (3) the use 2 ft. 7, in, piers of total length not seed backwork of the piers, etc. less than one-quirter the length of wall. We may, for these approximations, call the load at level of ground floor sill-line (VV) double our former figure, or 140 tons on each pier, neglecting girders. we are compelled to make at least 25 ft. of pier in 100 ft. walls, we get an area of 2 ft. 75 ms. x 2 ft. 6 ins., which will be unsuffered for 2.10 ft. be insufficient for 140 tons, which needs 140 cm, say, 12 super, ft. We shall need, in blue brick, some 5 ft, in length of pier on ground story, which leaves 5 ft. winlows, suggesting that for so many stories steel will allow much better lighting of the ground floor premises. Light is the girr by use of steel, and it is plainly all important in factory planning. Light too, may be gained by the not generally economical recourse of increasing the bay dimension. It appears demonstrated that, in modern practice, any such many storied warehouse-type floored building would, so far as the important point of light on lower floors is concerned, be more advantageously constructed of homogeneons steelwork with complete tie.

We will take one bay of a building, as in the diagram on previous page, and consider the loads in part carried by an intermediate stanchion dividing the span from back to front walls into two. load upon the stanchion, E, is plainly one-half that of the sum of the dead and superimposed roof loads plus the joist carrying the concrete; while the load upon each third floor pier head is this latter amount halved. The load is transmitted by the stanchion and piers to the third floor level. We add to the load on the stanchion its own weight. When we say that the load is on the stanchion, it is well to explain that the prop has to be arranged to carry such load, with a suitable factor of safety; for the load,  $\Lambda$ , in diagram, is the legal "superimposed" load of 56 lbs. per foot super., and is nonexistent, excepting when, as in a heavy fall of snow, some portion of the potential load is placed actually on the root. The stanchion, E, however, must be of such strength as is suited to withstand the whole load, as stipulated, together with the fabric of the roof. In the same way the "superimposed" floor loads, F. L. and Q. togother with the "dead" loads. must be adequately sustained by the series of stanchions. To arrive, finally, at the pressure upon the template under the lowermost stanchion, we take into account the loading as set out on the diagram. It is plainly the sum of onehalf the total weight of dead and super imposed floor and roof loads, and of stanchions of an intermediate bay. The result is a structure suited to carry the full superimpised floor loads of 2 cwt. per square feet which is required for buildings of the wirehouse class. In buildings not of this class, where of more than two stories in height, certain reductions may

the bard, poer. In practice one would be set of the bard, poer. In practice one would be set of channel and flange plate. certain pressures upon certain earths, and this is a point which in reality needs a knowledge of the site and subsoil before any decision can be made. The scheduled list allows, per square foot, one ton on soft clay or wet, loose sand, two tons on natural clay or confined sand, and four tons on compact gravel, blue clay, or chalk. According to the Act, therefore, from one to four tons per square foot may be placed upon earth, according to its nature as judged, if need be, by the authorities. If we were building on the poorest soil, the best recourse is a raftlike steel-and-concrete grillage; on a thoroughly sound bottom, ordinary cement concrete. In the former case our foundation must spread to an area in feet equivalent to the tons of pressure—the load, or fifty-five tons above estimated; and even the two-ton basis needs a considerable spread of concrete, or 271 saper. ft., and the footings must swell out in number in suitable accord, in practice say, 5 ft. 6 ins. square of concrete of a suitable depth.

It should be noted that there is a further advantage in reducing span, because less load coming on the external girderends, the area of the piers may be reduced. From this results easy gain in window space. Our calculations and estimates have been exceedingly rough and approximate, but the general trend shows the kind of work required by the designer of quite plain many-storied warehouses and factories. And it cannot be said to be anything but simple and elementary until complicated and irregular plans are encountered with irregular stressing of steel stauchions and unbalanced loads. In the simple illustration given we have a balanced loading of the stanchions. If we introduce stanchions into walls, or as V. in the diagram, all such are unequally loaded, and under such conditions the strength of the stanchion must be increased from two to two and a-half times that required for balanced leading. it is plain that stanchions well pinned into solid brick walls receive support from such walls. Stanchions in exterior walls are placed with their plane of maximum radius of gyration across the wall in simple English, the flanges are parallel with the wall. Hence the steel prop is strengthened in the direction of its greatest weakness.

Unless we are building in a country of potential earthquake shocks there is no reason for hastily deciding to provide a complete steel framing even for comparatively large buildings. Given sound, adequate walling, a design embracing central or interior framing tied with rivet, bolt, and plate, with exterior girder-ends on felt and stone templates, would even seem to present certain advantages. It is a real saving in cost where, whether steel wall-stanchion or not, a wall of certain specified thickness relative to height and length has to be provided. Interior girders, joists, and stanchions, if, as said, more than two in line, form with cleats and plates ample tie, such that allowing in imagination the exterior girders to project unsupported—except as cantilevers all conditions of equilibrium are met by rearing plumb walls to catch up the ends of the beams. They give a practically direct downward thrust by virtue of the elastic packing above the templates. There is no irrogalar stressing. This is not the case where the girders are secured to exterior free-standing stanchions, which are then the subject of unbalanced forces. With scientific steel design interiorly, such a

tied structure of twenty-five years back, with its east-iron columns and joists and girders on brackets bolted, in country blacksmith's fashion, with one or two inefficient bolts. The argument assumes sound, plumb walls upon enduring foundations. If we miss this, then, when a length of walling subsides, irregular stresses are communicated throughout the series of tied stanchions and girders of the interior construction.

## CONTEMPORARY ARCHITECTURE IN INDIA.

(WITH ILLUSTRATIONS.)

The Agricultural College Students' Hostel at Poona, erected from the designs of Mr. G. Wittet, consulting architect to the Government of Bombay, accommodates 120 inmates connected with the college with which it is associated. The main building contains the students' rooms, while the dining-rooms, cook rooms, bathrooms, and the like form detached blocks at the rear. The work was carried out in local grey trap and the roof covered with red Mangalore tiles, The total cost was Rs. 1,60,181, giving a rate of annas 5.92 per cubic foot.

The Science Institute Gujrat College, Ahmedabad, comprises on the ground floor the physics and natural history de-partments, while the upper floor is occu-pied by chemistry. Two well-equipped lecture theatres are located at the back. Local red brick is used for the walling, with dressings of white Hemnagar stone, Mangalore tiles being employed for the roof covering. Adjoining this block of buildings is the Sir George Clarke Library, since undertaken, as well as a new bungalow for the principal of the college in the same compound. Mr. G. Wittet is the architect of the institute.

The Civil Courthouse, Jubbulpore, in brick and stone, has a carriage porch leading to a cloistered verandah on the front side, the treatment of its arcade being similar to that shown in the photograph here given of the back view. The treatment is very English in style, with the mullioned windows. Mr. Henry A. Crouch, F.R.I.B.A., Consulting Architect to the Government of Bengal, is the architect.

The Post Office, Agra, is also completed, and its designer, the Architect-in-Chief to the Indian Government, Mr. John Begg, reports his satisfaction with the way in which the building work has been carried out from his designs. It is his opinion that in general appearance the building realises his intentions as being "successful in grouping and mass and in scale of detail." Some modifications in the lower part of the central dome have been carried out with good results prior to its final finishing.

We have also to-day chosen the photograph of another of Mr. John Begg's works in order to illustrate the stairca-e in the hall of the Mount Abn Residency. We have, however, no particulars of the building, which certainly serves to illustrate the versatility of the architect.

These undertakings figure among some thirty-two plates, chiefly reproduced from photographs, and forming the illustra-tions of the official annual report issued by the Office of Public Works in India for the year ending with 1914. The letterpress is written mainly by Mr. Begg, as architect to the Indian Government. Our choice of subjects is to be taken as fairly representative of the type of architectural adoption now in vogue in India under his supervision, aided by the provincial architects at the present time. Certainly these samples are among the best in point of design produced during the twelve months covered by the limits of this architectural review of the year's doings. The average ment of the majority of these Indian buildings is comparable with similar enterprises at home. They are certain y diversified, and this quality, of course, is largely due to the particular purposes for which the designs were made. The collection does not include any big undertakings of outstanding interest. We look, however, in vain for an evidence of any concerted scheme for the evolution of modern building on fresh lines under local conditions following upon historic traditions or as marking the employment of new or

mere and a Characay Post only . perhaps in a be said some tack fundy of idea and imperiability of lesson is she win by the burning. The mem real church at Maymyo, by the life II. Seaten Merris, F.R.I B A . is represented by an interior having semi-circular are es in a brick areade, with piers to may it and bold cushic inshiped cappings. Thus yendine of an official architectimes essastical building is marked by solliness and a brealth of macron expressed in a mod rately suitable and modern way on envil-bunding lines. The extener pe haps is less in accord with a place of waship as

MOUNT ABU RESIDENCY STAIRCASE IN HALL. Mr. J. BEGG, F.R.I.B.A., Architect.

from long distances may account for the likeness of character seen in not a few of these public buildings, in which the architect employed appears to be able to Europeanise most things, though now and again we remark in table exceptions to this tendency. For instance, Mr. John Begg has made a good attempt in the Agra Post Office to illustrate a combination of Eastern forms with European precedents, the whole purpose being con-trolled by a determination to meet con-

lecal materials, in different districts, Possibly such an ideal is not now possible, and facility of transporting building materials from long distances may account for the England, built largely for the Council. in India. He favoure the reconstruction style in a manner familiar to the reconstruction. member his constitutable into the state of this kind as Probar West Land during a long period of years. The new Law College, Allahabad, also from his hand, is large and imposing, and Sir Swint in Jacob des gued temporary requirements in a practical and the King Edward Memorial, Vimer. The architectural manner. This also is observe Gwaiior Residency, if hardly conceived on the same precedents, exhibits an attempt to assimilate types of that combine, and successfully scores in making an advance on the contemplated adaptation line towards developments. This last-named londing differs essentially from ideals worked for by the younger generation of architects. We do not say which is preferable, and a comparison would be invitious. In our personal judgment, a dead style can never be brought into line with living aspirations and as a provision in the future. Mr. John Begg has done much in that direction, and much more remains to be accomplished.

# THE ROYAL PHOTOGRAPHIC SOUTHTY'S EXHIBITION.

The sixtieth annual exhibition of the Royal Photographic Society, which opened on Monday at the Suffolk Street Galleries, Pall Mall, suffers from the absence of Continental work, but is a representative display of British camera art of the present day. The collection is arranged in sections embracing pictorial, scientific, technical, colour, professional, and trade work, the last class having found re-admittance, possibly owing to the stress of war conditions, after an absence extending over several years.

As usual, the largest room, the lecture hall, is devoted to the pictorial section, numbering over 170 exhibits, and here the latest impressionist efforts are hung side by side with untouched work. Yos 1 and 2, bromoils by George Brown, have both been taken in Durham City, the first being a view in Framwellgate Street, with the central tower of the cathedral peering d wn upon the pantiled roofs and yellow, rough-cast walls of the low cottages in the left, and the second shows the Abbey Mill on the wooded bank of the River Wear, with the south-west tower if the cathedral above. Two admirable, straightforward representations of Rheims Cathedral before its bombardment are contributed by the veteran artist, Frederick H. Evans. No. 5 depicts the richly carved west portals surmounted by the huge rose window, and No. 8 is an interior view, the point selected being athwart the nave and south aisle, so as to emphasise the deep band of figure carving in the capital of the arcade sup-port. No. 11. Through the Centuries, a bromide by R. H. Lawton, is a peep into the south-west transept of Ely Cathedral. Close by is a fine bromoil by RPerkins. Old Amsterdam," a view along Perkins. Old Amsterdam," a view along a canal to a signed church. Studies in which the problem of introducing the nude trans into idyllic landscape is solved with fair success are submitted by H. Y Summons (No. 19 to 24); one of the best of these is the first.

Amortion, showing a male figure reaching to a wreath just beyond his 2000 Northern His 2028) No 29, "A Northern Height," by k. W. Jackson, is a elever selection of a point where dark fir trees and a sandy rathway combine in an effective and well-contrasted landscape. In  $N \in 32$ . Evening on Derwentwater," by F. Humpherson, on the other hand, the charge of seen on this beautiful lake might easily have been bettered by the inclusion of one of the islands, or some of the bolder mountains. The time and labour expended in deciding upon the happest or most characteristic viewpoint are well utilised by the pictorial artist Of a very different character to the last is "Hamilton, Bermuda, by Moonlight, by Karl Strauss, No. 40, where the dark waters of the harbour throw up the bril-

"The Knife Grinder," by H. W. Fincham.

Among the eccentric studies of still life, demonstrating the catholicity of the hanging committee which accepted them, must be noted Nos. 48, 49, and 50 mere collections of cellos, warning pans, and other miscellaneous and incompatible odds and ends, devoid of arrangement or selection. No. 99, looking across the nave of "S. Pierre, Chartres." is a noteworthy photogravure, and of another type but equally attractive is a forest scene in bromide, No. 103, by A. G. Buckham. Whitby always yields picturesque bits to the camerist, and in No. 104, a bromide, G. B. Clifton has scored by going down to the river's brink at low tide overhung by steep tiers of fishermen's cottages. Two bromides, interiors of St. Bartholomew the Great, attract attention, Nos. 112 and 148, by William II, Collins and R. II. Lawton respectively; the former taken in the ambulatory, and giving a fine effect of shadow and sunlight, is the better picture. II. Essenhigh Corke has this year forsaken his flowers in natural colours, and gives two crowded London scenes in Nos. 123 and 124, "Lower Thames Street" and "Covent Garden," One always looks for the bold and impressionist work of Alvin L. Coburn, and this year he has Alvin L. Coburn, and this year he has three brilliant portraits, an interior of "Munition Works," No. 131, and large prints entitled "Peace"—sheep under cumula clouds—and "War." a battle-ship half-obscured by smoke. Dr. E Stevens gives us in No. 133, "Santa Maria Della Pace, Lago di Como." characteristic scene on that beautiful lake; and near by are two other North Italian scenes, also in oil pigment, John II Gear, Nos. 137 and 138. Fred Judge is not so felicitous as usual in his selection of aspect in his bromoil transfer. "Peterborough," No. 144, showing the north-west tower and pinnacles from the entrance to the Deanery. An attractive bromide is No. 164, "A Westmorland Landscape," by W. L. Shand, and this section is brought to an excellent close with the platinotype "Sunlight on with the platinotype "Sunlight on Lincoln Minster," No. 172, by Victor E. Morris.

Few exhibitions are complete without a view of the unfinished fourteenth century church tower of Dordrecht, as seen across the harbour, and this item, well portrayed, is supplied in G. B. Chiton's contribution, No. 136. Among the portraits the best is the only exhibit by Furley Lewis, No. 165, "A Polish Patriot," a striking and sympathetically treated character study of Ignace Paderewski, in platinotype. Among the transparencies in other rooms in Sections H. and HI. are some fine exhibits, notably No. 411, are some fine exhibits, notably No. 411, are some fine exhibits, notably No. 411, B. Smith; some dexterous copies of water-colour drawings by W. L. F. Wastell, Nos. 490 and 491; and the autochrome slide, No. 502, "The River in Autumn," for which the medal has been awarded by the council to J. Walton Lee, of Dilston-on-Tyne

## TRAINING IN THE METHODS OF TEACHING BUILDING SUBJECTS

inclusion of one of the islands, or some of the bolder mountains. The time and labour expended in deciding upon the happaest or most characteristic viewpoints are well utilised by the pictorial artist. Of a very different character to the last is 'Hamult in Bermuda, by Moonlight,' by Kul Straiss, No. 40, where the dark waters of the harbour throw up the brillant': I glited houses beyond and the trees as aftenettes against a murky sky, A. 2. I character study is the bromide,

were enrolled and completed the course, these gentlemen being selected from a list of applicants from all parts of the country.

Until recent years, isolated class instruc-tion in any selected subject was common, with the result that students did not have time or opportunity to obtain a sufficient time or opportunity to obtain a sufficient grounding in scientific principles to enable them to bring their knowledge to bear directly on problems arising in their advanced studies. The method of grouping classes in recent years has partially overcome this difficulty by enabling teachers to frame "courses" of instruction specially method to the modes of variously groups of suited to the needs of particular groups of students, one of the more important of these being the "building trades group." Accepting the principle of grouped courses as fundamentalty good, the present need is to make these courses efficient in the selection of subject matter, the treatment of such matter to bear directly on the main subject of the group without diminishing the prospect of obtaining fundamental knowledge, and to correlate the work of grouped classes intimately with each other, and with the processes, practice, and professional work of the industry.

The method of dividing the grouped course instruction for convenience of handling and of approaching the problems selected for consideration at this special course may prove interesting

To ensure thoroughness of treatment in the short time available, it was decided to restrict the series of lectures and demonstrations in this case, to work suitable for a student of building entering upon a first-year course of study in a technical school, or the assumption that his preparatory education was sufficient to equip him for the work. This preparatory education for evening students has for some time been receiving cireful attention throughout the country, and in the near future should cease to hamper the introduction of this particular technical

The subject matter of the course was conveniently treated under three heads, viz.:—Building Construction and Drawing, Building Mathematics and Geometry, and Building Science. Particular emphasis was placed throughout on the necessity for and opportunities of correlating these sections. In addition, the careful planning of the course at this stage was thoroughly considered, in order to prepare the student for more advanced work at a later stage.

Generally, the assumption was made that the subject-matter of the course lectures was known to the teachers in attendance, and it was thus possible to deal with the selection and arrangement of class examples and with the problems of class instruction presenting themselves constantly to the teacher.

In considering building construction and drawing the lecturer impressed the necessity for most careful training in draughtsmanship in the early stages, for an acknowledgment of drawing as the best means of communication between the designer and the craftsman or construction, for the elimination of the false from constructional detail, and a consideration of design in order to avoid the ugly or undestrable. He showed the need for a study of the properties of materials, and of the principles of mechanics, in order to appreciate, as the work developed, the principles involved in the selection of materials and in truthful construction.

The lecturer on mathematics and geometry of building attacked the problem of providing a really suitable course of work for building students erected on a sound basis, yet treating the subject in an atmosphere of its own. The lectures were developed from this point of view, and the treatment of the combined subjects everywhere bearing closely upon practical builders' problems was much appreciated. Free use was made of numerous demonstration models, many of which were quite original, and thus, by appeal to the eve, the common difficulties due to the more abstract methods of approach were largely overcome.

In building science the lecturer in charge had considerable difficulties to face, because experienced teachers are only beginning to realise the possibilities and importance of his branch of study. The general impression felt by all concerned was that an excel lent start had been effected in the development of a real "science of building." While the chief concern at this stage was the preparation of a student for work in later years, a close connection between elementary science and the builders' problems was noticeably maintained throughout the course, and much interesting experimental work was accom-

It is felt that this course—the first of its kind-has been a distinct success; the enthusiasm of the student teachers was obvious and it is hoped that the measure of success of this experiment in providing training for building teachers will be continued and deve-loped in future years. It would appear to foreshadow the reorganisation and improvement of technical teaching in this branch of work, and should go far to prove the value of and necessity for special training in order to produce a body of capable men, ready and able to attack the problems of builders' edu-cation thoroughly and scientifically.

The conduct of the course was supervised by Mr. Hugh Davies, H.M. Inspector of

Building Subjects.

The lecturers in charge of the three divisions of the subject were:—Building Construction and Drawing: Mr. W. R. Jaggard, F.R.I.B.A., lecturer in building and architecture at the Northern Polytechnic Insti-Geometry: Mr. F. E. Drury, F.I.S.E.,
M.C.I., head of the Department of Building and Civil Engineering, Royal Technical
Institute, Salford, Building Science: Mr. J. Leask Manson, B.Sc.Eng.(Lond.), M.R.S.L., A.M.C.I., head of the Building Trades Department, Municipal Technical School. Leicester. Mr. W. Munn Rankin, M.Sc., headmaster of the Department of Science and Technology at the Municipal College, Bournemouth, acted as local secretary for the ·course.

## THE EFFICIENT CONTROL OF REIN FORCED CONCRETE CONSTRUCTION.\*

A number of casualties have attended construction in concrete. A sudden collapse of a portion of a reinforced concrete building in a large city, attended with loss of life of workmen, generates in the public mind a fear of concrete construction; and a prospective builder is likely to resort to a less per-manent and less fitting style of building because of the uncertainty. He knows that a concrete building is serviceable and permanent after the cement has set, but he fears the risk arising during construction.

Structural engineers, on the other hand, know that the percentage of failures is small, and the accidents to be avoidable.

Dangerous conditions in reinforced concrete construction arise from (1) inadequate dessigns; (2) defective materials, and (3) unfavourable weather conditions and lack of care under those conditions.

All of these elements may be, and are, controlled in the larger cities by building codes and active inspection. For instance, in the city of Chicago, which has an unusually efficient and watchful building department, there have been no serious failures of reinforced concrete buildings under construction. In this city designs are checked over very carefully to see that they conform with the conservative practice established by the building code of that city.

It is in the smaller cities, that are not large enough to demand permanent buildings, but without building codes, that the most dan-

gerous conditions obtain.

The building codes are thought to be too conservative by some designing engineers of companies interested in the sale of materials. For instance, while these codes generally permit 16,000 lb. stress per sq. in. upon ordinary reinforcing steel, some designers will increase this to 20,000 lb. where the code does not prevent, and under circumstances where the sale of the material depends upon a low total

Many buildings have been erected under designs that are not conservative and yet have given good service. Their construction has been under taxourable conditions with reference to coment, sand, weather condi-tions, and shill of workmen; and the lack of factor of safety in design has been counterbalanced by the increased factor of safety in

Codes, however, must recognise average conditions. The architect or structural engineer or commercial firm supplying material who has drawn upon the factor of safety in design, and then has met unexpected conditions in the materials weather conditions,

etc., and has a follore on his hands, is cer-tainly in a weak position.

The larger number of failures of concrete buildings occur during the late tall when the low temperature and wet weather prevent the cement from hardening properly, At this time, too, the owner is anxious to get into the building. Every one is in haste; forms are struck before the concrete is hard enough to support the floor, above; the roof, which is often the weakest part of the design, is being covered with conders into which the rain seeps. Instead of weighing 45 lb per cubic ft., the weight of these cinders may run up to 100 lb. per cubic ft. Then, too, the plumber may seriously overload a portion of the floor with piles of pipes, may even remove a form support. Under these conditions it is no wonder that failures occur. In the presence of these unfortunate failures a designe" who has furmshed a conservative de sign is in a strong position.

The writer has investigated and made reports upon several failures in which it has been necessary to criticise the design. some of these cases the architect has originally made a conservative design with sufficient materials and proper connections. The sales engineer of a company supplying steel has afterwards prevailed upon the architect and owner to allow a substitute design, latter is shaved down to the lowest limit, inyolving high stress in steel, short laps bond, and defective continuity. While the substitute design will save in the cost of steel, the per cent. saved on the cost of the entire building is usually small, and will not justify the risk of the entire structure.

While recognising the fact that methods of construction and dimensions of structures proceed partly upon experience and the desire for economy, the writer urges that, in the case of reinforced concrete, designs should follow building codes and the report of the conservative practice as fixed by the joint committee on concrete and reinforced concrete which has recently been adopted by the American Society of Civil Engineers and the American Society for Testing Materials.

The standard designs of some of the constructing companies are also reliable and conservative.  $\Lambda$  special mention might be conservative. A special mention might be given to the Kahn standards of the Trussed Concrete Steel Co., Detroit, and those of the Corrugated Bar Co., Buffalo, for the dimensions of beams and girders of ordinary floors and roofs.

The codes, however, are naturally behindhand in respect to the newer forms of con-struction, such as the so-called "flat slab" design.

In construction with new materials the tendency is to follow forms that have been developed for old materials. Thus the first reinforced concrete building used the old wooden construction of girders, floor beams, and slabs between the latter.

In another line the first railway coaches were patterned after stage coaches.

Reinforced concrete, however, is continuous, like the old constructions.

The flat slah designs ount girders and floor beams. There is a continuous slab over the entire floor, and it rests upon and is monolithic with the expanded heads of the

columns. The steel is disposed in either a four way

dem or a two-way system.

These constructions are usually patented. Advantages are: (1) the better lighting of the room, (2) the increased head room, (3) decreased story height, (4) more simple stallation of surinkling systems, (5) simpler form work, and (6) a construction more keeping with the material.

columns passes up to 24 ft. loads and lider spacing. V than for larger When the panel becomes rectangular instead of square, the long side should not exceed the short side more than 3 part

The depth or slab should be at least 1 30

The depart of the expanded lead of the column needs attention. It should be stiff, The steel is in the bottom of the slab at the

centre of the panel, and passes up to the top of the slab near the quarter point of the span.

The steel that passes from one panel another should ap well over into the rext span at least 60 diameters beyond the edge of the column cap. And where both bars are counted upon as reinforcing over the column, they should keep well up in the top of the slab over the column, and run 60 diameters heyond the quarter point of the span.

The amount of steel should be about the

same in the various patented arrangements

for given loads and spans.

Over the column head, the amount of steel should be sufficient to resist an external bending moment equal to 1.15 W.L. f.r. a-terior square panel); where W. total load, live and dead, on panel; L. spin centre to centre of column along direct line.

## ---TOWN PLANNING IN SOUTH AUSTRALIA.

Considerable attention has in recent years heen given to the question of town planning. both by the Government and municipal authorities in South Australia. The opening up of all parts of the State for agriculture has had the effect of stimulating secondary in dustries in and around the metropolis, with the consequent development of the areas; and the need for the systematic arrangement of the suburbs, with the provision of open spaces, has become in reasingly pressing. Definite steps have previously been taken by the Government, and a conference of representatives of suburban corporations and district councils was convened to consider the subject. This resulted in the forma-tion of a committee for the purpose of having some co-ordination in the action to be take: by the municipalities.

Besides the proposal to submit a fill in the coming session of Parliament, the Government have purchased a 300-acre block of land. so that a scheme for the formation of a model settlement may be carried out as an example to those concerned. The area secured is about four miles from Adelaide, and can be served by an extension of the existing railway It is at present being used by the Common

wealth Defence Department.

The Attorney-General 'the Hon. J. H. Vanghan), who is also Minister for Pleasure Resorts, made the following statement in regard to the matter :---

"Careful consideration will be given to the basis of allotment, and we shall endeavour to adopt the system of tenants' co partnership. which has proved so successful in England In the past it has been the practice to throw In the past it has been the practice to throw a reserve into the centre of a community, and say that a town has been planned. Thus, only those whose residences abut on the reserve enjoy its benefits. That will not be done in the case of the new model. Areas will be set apart in different localities, so if it the number who will derive it are in the number who will derive it are I having their homes on the borders of receives will be greatly increased. I have will be greatly increased. I had so to 2 a practical demonstration of sold down a plan which differs from that upon which our suburbs have been begind a fixed a monetory of straight to do not 2 to another at right angles. I have to 3 to 3 it is possible to introduce converse in level which will lend beauty to the restaurching come my of space. It y will aim, not simply to attract one less of results of the straight and simply to attract one less of results. aim, not simply to attract one dent, for we hope to see hope as a few hundred pounds alongside the exhibit run into four figures. At present the military authorities are in possession of the land, and they will be some they will, of course, remain until they have no further use for it. In the meantime surveys will be made; but until the Defence Department is no longer in need of the area, The construction is generally considered nothing further can be done in connection more suitable in leads up to 500 lbs., and with the scheme of settlement."

# DEVELOPMENTS IN THE MANUFACULTER AND USE OF BRICK.

By W. D. Alsip,\*

In the very early ages of mankind, burned cary has use vered and was used to house and serve man. It is attended to go into the history of the development of the craft of the K making. We will take burned clay wate that we find on the present market for construction purposes, and see if we can eradicate some of the abuses and create a center apprehension of some of the causes and effects that tend to curtail the use of this best of all fireproof material.

Under the heading "Brick" w

we have a great variety, which I will divide as follows: First, common building brick; second, face bries; third, paving brick; fourth, fire brick.

Common brick are made by several pro cesses. Viz., (a) slop or water-slipped soft mud brick: (b) sand mould, soft mud brick; (c "Auger," plunger machine," wi or st.ft mud brick; (d) dry pressed " plunger machine," ware cut,

(c) hammer machine, semi-dry day brick, a. Slop or water-slipped brick are only manufactured in a small way, and therefore

acred not be considered.

(b Sand mould brick are manufactured by hand, either by a striker or monlder. The clay is prepared (tempered with plenty of water) and delivered on a table. The striker cuts a wedge-shaped slice off, large enough to fill a little more than the mould, and casts it into the mould with force enough to fill the corners and edges. The clay must strike the bottom of the mould first, then spread and n'll from bottom to top to avoid wiping off the sand which has been deposited on mould before coming to the striker, otherwise it will not be possible to get the brick out of the mould, which usually holds six bricks. After the moulds have been filled, the caps or clauds are struck off with a strike-stick, which is taken from a water trough and thrown back to be added to the next mould or brick. The sand mould brick are also manufactured "by hand" a monlder This process is used when clay is fat or sticky and does not leave the mould The moulder cuts off enough clay to equal about a brick and a half, and rolls it in sand forming a pointed claud, which is cast the same as described above, except that the cups are cut off by a wire bow. Sand mould brick to-day are nearly all ma hine-made, and they are an improvement on the hand-made product. Clay used is usually taken from the surface deposits. The brick when burned weigh from 4 to 4½ lb., and are of a more or less porous nature. Canadian standard brick weigh less than most of the American manufacture, owing to the parel or trog which is moulded into the flat or bottom side of the brick. Sewer face, common and fire brick are manufac tured by this process.

(c. Auger machine or wire-cut brick are manufactured from plastic clay with just enough moisture to cause the clay to work into shape. Some machines mould the clay stiff enough to pack or pile eight high with out losing their shape. Shales and surface lay are used. The far clays take much less power. The brick are very dense, and weigh from 5 to 6 lb. Paving, sewer, face and common building brick are manufactured

by this process.

d Dry pressed by a are made of surface and stale clays. The clay must usually be worked and dried and then ground into a fine state. This ground clay or dust contains about seven comes of water per brick. and is fed into the machine, where it is subperted to enormous pressure. In some dis-tricts common banding bro, are manufa-1: this process. Hammer made have brick are made by a

e Hammer mastene ones are made by a mastene the tamps the clay into the mound, in near the same manner as a quartz stamp mill. These machines are only used, I be I even in the St. Leuis, Moor, district, and doubtless they will soon, disappear.

## THE USES OF BRICK.

We have some to the uses of brick. Most uses of ir a have sufficient strength to correctly each required of them in ordinately.

Plestient As I Br. & Tile and Lumber Company.

nary bunding. Your local engineer will letermine and pass on all questions of this Your local engineer will There is little room to doubt the strength of a brick which has been built into a twelve or lifteen story skyscraper, and found not wanting. Such a brick will or should be accepted for stores, warehouses. dwellings and structures requiring less pres where concentrated loads are to be carried on piers, or at enus of steel beams, clinker brick or paving brick should be used. Brick laid up in lime mortar make a good wall, but when laid in mortar cement, a wall is produced that is nearly indestructable and will stand for generations. In cold climates, such as prevail in Western Canada. the architect and builder must keep in mind the power of the various kinds of brick to resist cold. A porous body will absorb and conduct much less cold or heat than a solid or dense body; therefore in selecting brick for building a wall for a dwe for a dwelling where the walls are only 9 in, and 13 in, thick a porons brick will make a much warmer house. The same applies to blocks, stores and apartments, where steel or remforced concrete are used. The curtain walls are light, and therefore must be built with brick that will be as nearly non-conductive as possible. The old-fashioned stone house, the new concrete house, and the wall built of vitrified street pavers are all the best old conductors it is possible to select, and if these materials must be adopted, then the best backing or lining should be used to ensure a warm building. A stone or con-A stone or concrete wall should be lined on the inside with porous hollow brick, to which at least 25 per ent, sawdust has been added, and burned out, producing a fireproof body much like The cork. plastering may be directly on these brick, and no bad effects will be produced in the coldest weather Walls finished with water-coloured kalsomine have stood season after season in kitchens and laundries when this method of construction has been adopted.

The old method of furring or strapping the walls and lath and plastering is not as effective, as it is found nearly impossible to keep the air in the room from coming into contact with the wall and forming frost or dampness, which in turn forms mould or must, which, when dried out, forms dust, which permeates the rooms and is the cause Many cases of hay fever, of much sickness. tuberculosis, rheumatism, and kindred ailments can be traced to damp houses. Damp, cold houses are not caused—as many believe—by the moisture passing through the walls. by the walls becoming cold or hot, and then having hot or cold air coming in contact with them, causing the moisture in the air to condense and deposit drops of water, unch as a glass pitcher will do when filled with cold water on a humid day. In building a block, warehouse, or home, as much and more care should be exercised in selecting the brick for the different parts of the work as is used in selecting material for any other part of the building.

A freight depôt or warehouse might require vitrified paying brick to stand the hard knocks, and keep clean of soot and dirt in a down town district. A stable would have to be built better and with more care—as to the ability of the structure to keep drythan perhaps any other building. The large amount of moisture thrown off by a stable full or horses, just in from heavy work, will condense on the walls of a concrete, stone or solid brick wall, but when lined up with porous, hollow brick or tile this is almost it not entirely—overcome. For a dwelling he use a faced brick, more or less porous, that will keep clean and ripen in appearance by age, is preferable to a more dense or water-proof brack, and when backed up with a potous hollow brack or block it will produce a dry, warm house that will save fuel, do away with draughts, and be a joy to the owner all his life. Speaking of draughts, often in a house where windows and doors are arright there is a constant draught in cold weather, caused by the heated air of the room coming in contact with the cold, solid wall. The cool air settles to the floor and is drawn toward. and is drawn towards it, causing a draught

that is very disagreeable and apt to cause colds and ill-health to the occupants.

In conclusion, this slogan should be adopted by all builders: "The best is not too good. -Canadaan Contract Record.

## ---Currente Calamo.

Mr. Tennant, the Under-Secretary for War, is seldom happy in his replies to queries about his department. The instance given by Mr Stanley Peach in his letter on another page is, however, one of the most flagrant. Mr. Tennant recently stated that the offer of the Royal Institute of British Architects to assist the department "was not received until May, 1915, when the greater part of the work of creeting wooden huts for the troops had been finished; hence comparatively little advantage could be gained by the War Department availing itself of the offer." Our own readers have, of course, already concluded that this statement was untrue, knowing, as they do, that the offer was made on September 11, 1914. They have possibly imagined that, maintaining its reputation as a branch of the Circumlocution Office, it forgot or neglected to accept the offer till the need was past. This is not so, as Mr. Peach's letter makes clear. On September 23, 1914, a letter was received from the War Office acknowledging the receipt of the letter and stating that "the Army Council much appreciates the patriotism which has prompted the offer, which has been noted for future use." Why was the offer not utilised? Will somebody ask Mr. Tennant that when Parliament reassembles, if only to elicit another of his informative replies?

Mr. Ernest Newton, P.R.I.B.A., emphasises in a letter to the Times the disastrous' idiotey of the Parliamentary War Savings Committee's recommendation that "No one should build a house for himself at this time,' and that "Decorations and enlargements should be cut down as much as possible." he points out :--

he points out:—

"To stop all but absolutely necessary building would no doubt keep money in the pockets of those able perhaps to antord a modest and prudent expenditure in house building, decorating, and furnishing, but it would entirely deprive of all means of livelihood a very large number of people beyond military age and with no aptitude for munition making or other definite war work, even if it could be tound for them. These men must inevitably become a burden on the community, and, consequently, what is saved in one direction is lost in another. Almost everyone connected, directly or indirectly, with building work already finds his income greatly reduced; mdeed, in some cases the vanishing point is almost in sight, and it work of this nature excess entirely complete rum is mevitable."

That matters little, possibly, to well-salaried

That matters little, possibly, to well-salaried placemen who seem to have little to do but indite these fatuous recommendations to "economy" which is no economy, but really penny-wise and pound-foolish blindness. Nocalling has sent more men to the colours than that of architecture proportionately to its numbers, and no great group of industries adds more remuneratively to the solid wealth of the nation than those connected with building. On all sides the need for our work is urgent-more so than for many years pastand to stop it and turn hundreds of thousands of willing workers into panpers, and thus increase the heavy burdens borne by the rest of the community, is egregious folly. Even half bankrupt Austria—so a Vienna telegram stated not many days since—is raising money to keep architects and sculptors at work on the public buildings and monuments of the capital, while our own "economists" are doing their best to penalise an industry which at the beginning of the war it was distinctly promised should be encouraged wherever possible.

Most of the disputes in the building trade-1 - 1 and those fought out with the greatest new local bity have alls non-the question as to that work should be executed by men in branches to the of affiliated intons, such as the bricklayers plot of and carper ters and joiners, and work by mer the in ontside branches, including the plumbers that the land plasterers. For a considerable period Halling to the land plasterers. efforts have been made by the National Collins efforts have been made by the National variable ciliation. Board to frame regulations which seeking shall be mutually acceptable to building that have shall be mutually acceptable to building that have some trade innered building. employers and to the various trade unicity settling the lites of demonstration between the settling the lines of demonstron between the particle of the solutions, which have the particle of the National Country of the Support of the Support of the National Country of the Support crowned with success that the dualt proposals the proposals of the second to the condition of the workers and the unions for their consideration. It they are mutually agreed upon they will be brought to the present place to take the proof of the present place. The authorities to the present place to take the proof of the present place the proof of the present place to take the proof of the present place the proof of the proof of the proof of the present place the proof of the pro of the proposed regulations has appeared in some of the daily papers this week, but it is incomplete, and, without its context, buildly provided. These double being not nature of tree, 5d.—It incomplete, and, without its context, hardly comprehensible. For the present, and probably till after October 11, the full details are not likely to be published at any rate. authoritatively.

A case of some interest to the lon dang trades, which in many ways seem the scapegoats of law and order just now, has just oeen decided in the Court of Crim nal Appeal The appellant, a bricklayer, was sentenced as the Middlesex Sessions to nine months' hard labour for having, as was alleged, housebreaking implements in his possess in at night. He was, it seems, found in possession of a large chisel and a screw-driver, and he complained on appeal that the onus was thrown on him at the trial not only to prove that he was in lawful possession of the tools. but that he did not intend to use them un lawfully. The Court quashed the conviction: holding that the onus could not and should not have been thrown on the appellant. Mr Justice Bailhache very sensibly remarked that if a bricklayer going home late at night with his tools could be called upon to are out for his possession of them, the tride was one to be avoided, for every bricklayer in such a position was liable to be locked up.

While discouraging work at home, the Gov ernment, moreover, seems to be sending a good deal abroad. The Canadian Contract Record, in its issue of August 4, says the report is that the British Government has been negotiating for the purchase of all kinds of portable structures to be taken to Northern France and Belgium to replace temporarily the dwellings, churches and schools which have been laid low in that ravaged territory A large Brooklyn firm has been ment oned in connection with one of the most important contracts which are to be awarded; but the requirements are on such a huge scale that Canada cannot fail to receive a share of the business and a considerably greater share of subsequent orders of the kind. It is said that the contracts now pending include one for the construction of 20,000 portable houses -the largest single contract ever given for buildings of this type. Entire cities and towns are being created from them to house the refugees made homeless by the high tide of the German advance into France. The buildings are to be so constructed that they can be set up quickly upon their arrival in France. Shipment is to begin early in the lines. Market if the contract goes through. fall it the contract goes through.

P 10 to as the background. Under these conditions the sale of it to courts would go down at hist a turnover of £120,000,000. It is suggested Exchequer, which - more than the amount received by the State before the war, and that the balance £42,000,000 per year go to a National and Municipal Development Fund tor the following purposes. People's pulaces should ultimately take the place of the present public houses, and should be built and mountimed out of the profits of the higher triffic. In these a special reature should be heverages. Ample to evis on should be made for recreation and issument and instruction, with lecture half, withter garden, reading and writing from, reference library, and rooms for friendly and other societies and private par tres. Music should be provided, and all sorts of games rateral for, both under cover and in the open or. The people's palaces should be maniged by a committee composed of memhers of the local authorities, with one third co-opted from trade union and other organisations. Under the heading of amusements, the author advocates that all theatres, musichalls, and emenatographs should be national used, and curried on by the State to meet in terest and sinking fund therges, and not to make a profit. He tay ours also hosp tals, in firmaties, and convalescent homes hemz taken over by the State, as well as institutions for the hore the blind, deaf and damb, cripples, and for hor.

## DUNBLANE CATHEDRAL, PERTH SHIRE, SCOTLAND, MEASURED DRAWING OF THE W. FRONT.

Our last illustrations, in our issue of De-ember 1c. 1914, of this famous Scotch (at ledia), comprising double and single page hatographic plates, were of the new and mater oak stalls, "altar" screen and ornate wak stalls, "altar" screen and organ case, carried out from the designs of Sir Robert Lorimer, A.R.S.A. Our earliest grawings of the church, specially worth reference, appeared on May 20 and in October, 187c, from the masterly pen of the late Edward Francis C. Clarke, showing the west grade and produced at the characteristic of the late of the produced at the characteristic of the late. mate link tagade and south aisle, recording the work as a then stood in comparative run. Mr. J. 8 G/bson, F.R.I.B.A., also lent us a view from his sketch-book representing the interior of the nave of Dunblane looking west, in the BUILDING NEWS for July 24, 1885, which, of ourse, was long prior also to the restoration, course, was long prior also to the restoration. Mr. William Ferguson, of Glasgow, published in oar pages an exterior view of the west front on December 13, 1878. Sir R Rowand Anderson, LL.D., re-roofed the nave and testored the cathedall about twenty years since, and furnished us with a most interest. mg account of the history and description of the building when we devoted a double page to the accurate plan which the architect had to the accurate plan which the architect had made and a general view of the church as tenistated by him see Building News for December I. 1893). The Mural Memorial erected to the Stirlings of Keir on the east wall of the north aisle of the nave was designed by the same vectorial Science has been declared. signed by the same veteran Scottish architect in 1912, when we reproduced a photograph of the work on March 22 that year. To-day we are able to give a double page of measured drawings of the elegant frontispicce of Dimblane Cathedral delineated by Mr. Scott Lawson, of the Royal College of Arts Daublane Cathedral occupies the site which Durblane Cathedral occupies the site which is a timately associated with the introduction of Christianity into Scotland when Blaan visited the North of Great Britain from Iroland at the end of the sixth or beginning of the seventh century. The monastery of the the seventh entury. The monastery of the Caldees was founded by him, and he became their abbot and bishop. Four centuries later Bishop Clement has left a record of the sadly decayed condition of this very early Scotch church at Danblane, which had then for some while suffered in competition with the Culdee's newer mourstic foundation at Muthill and thus the ancient mother church stor verger on the brink of rum. Clement was a Dominican, and in 1233 he became Bishop of the Diocese, and from that time the turn-only point in the history of Dumblane was reached. It is his building which still is more or less preserved for the edification of all stadents of architecture. The see had all stadents of architecture. The see had much to contend with in those days; at last the church authorities acknowledged the Earls of Stratherne and their feudal claims, into its records testify to many phases of political trouble and also neglect of the atloded, while contests raged now and again tetween the rival factions of Ecclesias. then order, and then came Protestant inroads, though the Popish roof "remained on the walls of the choir. The nave for ages was walls of the choir. The nave for ages was left open to the weather and the sky, having the roof whatever. The church, as we have the building consists of a choir, 80 ft. ong lev 23 ft in declinating on the north wide of a long, as lelike apartment of two flours, the loner one being vanited, and a same the corth and a large the corth of south aisless, 129 ft, long by 55 ft broad, and divided into eight bays. A tower rises on the south side opposite the fifth tower rises on the south side apposite the fifth bar, coincired from the west, 22 ft. square and 27 ft. 1/2h. surmounted by a slate spire over 2) ft soil. The hulding is, with the except of a tracker two thirds of the tower. and 97 ft. Fight, surmounted by a slate spire over 2.1 ft. full. The hulding is, with the except of the Unit worther is if the tower discrete of the term chancel, implying a screened-in place or sanctuary. The ciborium or half discrete full and is the structure creeted darbin generally met with in the churches by Brokep Comert, who ruled over the Discrete full to the full formal in such the sanctuary. The ciborium or half darbin generally met with in the churches of Italy over altars, and having richly embroadered langings suspended either as doson to the fact to add ton. It may belong to the sanctuary of the sanctuary. The sanctuary of the reservation of the sacrament. The Jubb at Distingle ranked among the most remarkable of its kind and was exception.

no relation to any part of the cathedral, and no structural indications exist to show what position it occupied relatively to the early building of which it formed a part. The top part of the tower belongs to the end of the fifteenth century The west end has always been greatly admired. The vesica window in the apex has been made famous by a poetical, but most in-accurate, description of it by Ruskin, in his accurate, description of it by Ruskin, if his Edinburgh lecture. There being no vaulting to the aisles, there is no triforaum. The clerestory comes immediately above the nave arches. There is a passage in the thickness of the wall, and the inside face consists of a series of moulded arches two to each bay of the nave areade and richly moulded, but only about half of the series being filled with aroun nam of the series being filled with tracery. The outside or west window face corresponds with the internal treatment of the design, but the mullions and tracery are quite plant. The aisle windows are all alike scept the end ones and the east, which are divided into four lights, the others having five. There can be no doubt that every care was taken by Dr. Rowand Anderson to carefully repair and retain all that could be preserved of the old fabric, and his restoration has most certainly saved the cathedral from becoming a heap of ruins, for it might well have collapsed at any moment, owing to its neglected state when he took up the repairs Lawson sends us the following notes as to the subject of his excellent drawing, which, of course, shows one of the finest parts of the cathedral: On the ground floor the western doorway is deeply recessed with a series of shafts and arch mouldings of the first pointed period of design flanked by an first pointed period of design flanked by an acutely pointed blind arch on each side with trefoiled head within it. This lower stage is surmounted by three lofty, pointed windows all of equal height, and each divided with two lights by a central mullion, and having the arched head filled in this central window by a cinquefoil, the side lights being finished with quatrefoils. These windows are enclosed with a label moulding having carved terminals, which have weathered badly. jambs and arches have plain triple splays and the opening in the arched heads are cut out like the windows of the clerestory. A passage similar to the clerestory one runs round at the west end with an inner areade of clustered shafts and mouldings all corresponding. In the internal areade the three gable is occupied by an elegant vesica piscis to which Ruskin directs particular attention m the reprint of his Edinburgh lectures.

## JUBE, DIXMUDE, BELGIUM. (DEVOLISHED BY THE GERMANS

This exquisite and highly ornate 15th Century screen, one of the most beautiful in Belgium among Flemish masterpieces of applied design and Gothic workmanship, has been destroyed by the German vandals during their wanton devastation in Flanders. We are indebted to the Rev. Ernest Geldart of Dorking, for the loan of the accompanying photographic illustration now reproduced. Much less open in its design than our Eng-hsh Rood screens, and in this respect also differing from examples of the more usual Jubé, such as that in Limoges Cathedral, it has rather more the character of the Greek Iconostasis so familiar in Eastern churches. The custom of drawing a veil round Christian altars crystallised during the Middle Ages into the very general practice of setting up structural screens, built of stom or timber, while in Spain, particularly, wrought iron and metal formed the material largely employed. This Jubé at Dixmude in righty employed. This affice at Prixinois is not without Spanish influence, judging by its elaborate Pateresque character and mannerism. The use of enclosures and screens in churches naturally led to grand the property of the property and imposing erections, and from them arose

ally rich in its detail. The rood, however, had for a long time been absent. The central figure in the screen itself represents the Majesty of the Godhead of the Risen Lord, majesty of the Gomean of the Risen Lord, who is depicted in the midst supported by adoring angels. The choir organ, which was added later, rose, as the photograph shows, above the Jube, and it had a wooden gallery of still later date, extending right and left of the organ. The word Jubé and left of the organ. primarily meant a pulpit or ambon or a reading desk or place, more commonly designated the rood loft, in some instances taking the form of a narrow gallery, positioned for the greater part in the usually accepted situation between the nave and the choir. France the term became to be applied in this wider sense from the first words uttered by the Gospeller, be he abbot, bishop, or merely the celebrating priest—"Jubé Domine bene-ducere." The reason why the Gospel was read from so elevated a position was definitely given by Pope Innocent III: it is that the ministers who proclaim the Evangel of the Gospels should go up on high, as said the prophet Isaiah, "Super montem excelsum ascende tu, qui Evangelizas Sion, exalta in fortitudine vocem tuam." The screen when complete, therefore, had a platform usually about 6 or 8 ft. wide, from whence the laity were addressed, and for the most part it was here the Gospel was recited, at least on Festivals during the celebration of the High Mass, this signification being participated in Mass, this signification being participated in and understood by the entire congregation worshipping in the nave. "The Lenten veil," suspended on the Western face of chancel screens, shut off the choir of the building for a different purpose when the veil separated the priests from the people thus temporarily. The Anglo-Saxon pontife the procedure of the choir of the choir of the separated the priests from the people thus temporarily. thus temporarily. The Anglo-Saxon ponti-fical provided for this, and in their small churches in those days a curtain was stretched across the commonly quite narrow chancel, and so the draperies were easily there exists the adjusted. At Salisbury there exists the remains of a winch, used to haul up a much bigger veil, which indicates the position adopted in that fine 13th Century cathedral. and we fancy there is also a similar record. existing in Durham Cathedral. This Jube at Dixmude stood, till the Germans smashed it up, in a perfect condition, unaltered since its erection in the time of the Spanish occupation of the Low Countries, except that the organ had taken the place of the Rood itself, and this accounts really for the absence of that usually essential feature as mentioned in the earlier paragraph of these few descriptive notes.

While exervations were being made on the With exercitors were being hade on the north side of the Abbey Churchyard at Dunfermline there has been discovered the foundations of an old wall, about 2 ft. in depth and of equal thickness, faced with hewn stones, about 50 ft. in length.

# Our Office Table.

Professional men who have practical experi ence in various branches and grades of the engineering trades and are anxious at the present time to place their services at the disposal of the Government are invited by the Board of Trade to consider the possibility of undertaking manual work in connection with the production of munitions of war. The great need of the moment, an announce ment issued by the Board states, is for skilled mechanics (turners, fitters, millskilled mechanics (unriers, inters, inters, minimizers, etc.). Men whose training has included engineering workshop experience can now do valuable service by offering to do manual work at the usual rates of payment for such work. They will not displace any skilled workman who is already employed or significant the control of the contr is capable of being employed upon the production of munitions. They will simply increase the army of those who, by work at home, help the Armies abroad. Professional men who wish to offer their services to this end should send full particulars of their qualifica-tions to the "Engineers' War Service Re-gister," Queen Anne's Chambers, West-

The contract for the extension and improvement of Freemasons' Hall, in accordance with the resolution of Grand Lodge of December 3, 1913, was signed with Messrs. John Greenwood, Limited, on April 19, 1915, and the works were started within a few days. Owing greatly, however, to a difficulty with owners of adjoining property over party wall questions and agreements respecting infringements of ancient light rights—two of which, lacanse of delays which the board has striven of ancient to avoid, remain uncompleted—the works have proceeded slowly; but the site has been excavated, the foundations of most of the walls are in, and in parts the walls have been carried up to above ground-floor level, while the necessary works to party walls and under-pinning are in hand, as well as the prepara-tory work for the erection of stanchions Another cause of delay has been the difficulty which exists in obtaining an adequate supply of labour because of the war: but, though this is likely to continue, much more progress is to be anticipated in the immediate uturs

The further works now decided upon will institute the decised had been in clease this figure to nearly 501,006 square feet.

# Correspondence,

### MORE WAR DEPARTMENT INACCURACIES.

To the Editor of the Building News,

Sir, My attention has been called to a reply given by Mr. Tennant, Under-Secretary of State for War, to a question concerning the use which the War Office has made of archi-

Mr. Tennant is reported to have said that "the ofter of service by the Royal Institute of British Architects to assist in any work carried out by the War Department was not received until May, 1915, when the greater part of the work of erecting wooden huts for the troops had been finished, hence comparatively little advantage could be gained by the War Department availing itself of the offer."

As this statement is incorrect, and I find has already given rise to considerable misunderstanding. I beg to make the following statement of the facts:

A complete offer of the services of all members of the Royal Institute of British Architexts and of other members of the architectural profession, was made to His Majesty's Covernment on September 11, 1914, in a letter from the Architects' War Committee addressed Right Hon. J. A. Pease, P.C., M.P. Minister authorised to deal with offers. It was acknowledged by Mr. Pease, on September 14, 1914, and the War Committee was informed that the letter was being forwarded to other Government Departments and that if an opportunity of utilising the help offered arose, a further communication would be sent.

On September 23 a letter was received from the War Office, F.W.4, dated September 23, 1914, in which it is stated that the writer is commanded by the Army Council to acknowledge the receipt of the letter of the 11th contaning the offer of service of members of the Royal Institute of British Architects and other gentlemen of the architectural profession and stating that the Army Council much appreciates the patriotism which has prompted the offer which has been noted for future consideration.

From these letters it is manifest that the offer was in the hands of the Department which Mr. Tennant represents in September. 1914, at a time when the work of the huts had hardly been commenced, and not in May, 1915, when the greater part of the work had been completed as stated by Mr. Tennant.— Yours faithfully,

C. STANLEY PEACH. Honorary Secretary, Architects' War Committee.

9. Conduit Street, W., August 20, 1915.

Mr. W. T. Morgan, who was lately chief assistant surveyor for the Eastern Division of Carmartheoshire, has been appointed divisional county surveyor for the Northern Division of West Suffolk.

--

At Raunds on Friday Mr. F. H. Tulloch, an inspector under the Local Government Board held an inquiry into an application by the urban district council for sanction to horrow £1,500 for providing and laying out the new

The samtary officials in Leeds have lost one of their number in the person of Mr. James Edward Amsworth, assistant sanitary inspector, who has succumbed to dysentery at Alexandria. The late inspector had been connected with the department for about three years. The Board of Trade state that in the trades compulsorily insured against unemployment, namely, building works of construction, engineering, ship building, vehicle making, the percentage of unemployment at August o was 1.03, as compared with 0.96 a month ago and 3.95 a as compared with 0.26 a month ago and 5.95 a vear ago. These figures relate to the whole of the United Kingdom, and include all unemployed workmen in the insured trades. It will be seen that the rate of unemployment in these trades remains less than a third the rate of a year ago.

HASTINGS. — The church at Burton Hastings, near Nuneaton, is to be restored. The educe, which is in the Early English style, acciently belonged to the Monastery of Nuncaton. It is proposed to put all the stonework into good order, to execute repairs to the windows, to strengthen the tower and porch, to take off the present roof of the chancel, and substitute a new barrel roof, and to effect many other necessary alterations and additions. The work will probably cost £921. It is hoped eventually to put the bells in order, to erect a chancel screen and a new pulpit at a cost of £240, thus making the total outlay about £1,160. It is further proposed to reseat the church, either with chairs or with benches.

LLANDUDNO.—The police headquarters at Llandadno were removed on Wednesday to the new Police-building and Petty Sessions House which has been erected in Oxford Road, near the railway station. It contains Road, near the railway station. a charge-room, parade-room, and other ac-commodation for the police, and cells for prisoners, with two courtrooms on the first floor, a large room for petty sessions, and a smaller room for occasional courts. There also a residence for the police inspector. The cost of a little extra land in order to plan the police inspector's house to face Vaughan Street, which some day will be an important thoroughfare, where it would face westwards, would have been about £100. By a majority of one or two the committee refused to sanction this additional expenditure of £100, and so the occupants of the inspector's house, probably for hundreds of years to come, have been condemned to live in sunless rooms with an ugly ontlook.

### -TRADE NOTES.

Messrs. Robert Hammond and Son, 64, Vic toria Street, Westminster, regret to announce the death of their senior partner, Mr. Robert Hammond, on the 5th inst. It is the intention Hammond, on the 5th inst. It is the intention of the firm to carry on the practice under the old name and at the above address. Pending the return to civil life of the junior partner, Captain R. W. Hammond, now on active service, Messrs. Preece, Cardew, Snell and Roder have kindly undertaken to execute, on behalf of the firm, all work now in hand and any future work which may be entrusted to the firm. Messrs. C. Jennings and Co., timber and plywood importers, get eral woodworkers, 952. Pennywell Road, Bristol, draw our attention to the fact that they have boats just arrived with spruce, birch, r.d and white timber. They will be pleased to answer inquiries in regard to timber, plywood, or woodwork of any kind, either manufactured or otherwise.

Boyle's latest patent "air-pump" ventilators have been adopted for the swimming bath at St. Paul's Schools. Hammersmith, London, W.

The roofs and floors at the Faringdon police

station have been given a waterproofed cement treatment. We understand that the result of the Pudloed work was very satisfactory

The death is announced of Mr. John Ritchie,

The death is announced of Mr. John Michae, builder and contractor, Dunblane.

The corporation of Colchester have appointed Mr. A. G. Wheeler as assistant surveyor and Mr. A. G. Andrews to the position of draughtsman and building surveyor.

of draughtsman and building surveyor.

The Bishop of Peterborough has dedicated the Lady Jane Grey memorial window, a new vestry, and other alterations and additions to the parish church of Newtown Linford, near Leicester. The cost of the new window has been borne by Mrs. Grey, and that of the new communion rails, reredos, carved oak panels, and screen at the west end by Mr. T. W. Everard. The vicar raised funds for the restoration of the organ.

At the last meeting of the Clydebank Dean

At the last meeting of the Clydebank Dean of Guild Court, John Brown and Co., Limited shipbuilders and engineers, applied for permission to form a new street off Clyde Street, and also to erect seven tenements in Clyde streets and the new street, at an estimated cost of £12,000. The plans were passed. These tenements form part of a comprehensive scheme of housing which Messrs. Brown have undertaken for the accommodation of their workmen. Eight tenements are at present in course of construction in Clyde Street.

ACTION BETWLEN BUILDER AND SUB-CONTRACTORS. At Newcasse on Tyle County Count, before ats Honour Judge Green well, in Wester day, to easy to reach for an actual emission to a region to the form a sub-Sons, at General to the form the form the analysis of the emission of the form the form the form of the sum of the sub-cover the same of the second to the cover the same of the second to the cover the same of the second to the cover the same of the second to the form of the for of the Stella Coal Company. Plaintiff was sub-contractor to the defendant, and a dispute arcsi contractor to the defendant, and a dispute are shetween them as to putring up in ings and putring in from of the honses. Plaintiff declined to do this work because it was not in the defendant's specifications, on which he had contracted, and as a result of the dispute defendant took the contract out of Greener's hands. Greener now canned £47.7s, 8d, for timber which he left on the defendant's site, and which had been used by limit and also £50 for timber which had been used by limit and also £50 for timber which had been specially prepared for the houses. Defendant's counter-claim alleged that the plaintiff had overpaid £19 bs., that £192 had already been expended toward-the completion of the contract which the plaintiff had not fulfilled; that the sum of £76 was estimated to finish the work, and that £43 had the find not fulfilled; that the sum of £76 was estimated to finish the work, and that £48 had been deducted from the price of the houses because of the plaintiff's failure to comply with the specifications. Defendant also counterbeen dealt test from the price of the houses because of the plaintiff's failure to comply with the specifications. Defendant also counter-claimed for £15, which appeared to be outside the contract in dispute. Greener gave evidence in support of his claim, and declared that any deviation he had made from specifications was made with the consent of Charlton. Mr. Municularly and the defendant was quite willing to pay for whatever timber he had used that was the property of the plaintiff, but defendant had by no means the quantity alleged by the plaintiff. He admitted owing the sum of £29 13s, 6d, on that item. With regard to the material in plaintiff's workshop at appeared to be largely of ensurable measurements for the work, and, in any event, should be the subject of nominal damages only. Mr. Municularly stated that defendant's counter claim are selectance the plaintiff would not complete the contract. Judgment was given for £55 ps. 13d on the claim, and for £51 12s, 2d, on the counter claim. Each side undertook to pay its own costs.

counter claim. Each side undertook to pay its own costs.

AN INSECURELY FASTENED GIRDER. At Nuncaton the North Warwickshire coroner (Dr. C. W. Hiffe) hold an inquest on the 17th irist, on the body of William Carr (30) crestor's labaticer. Lenester who was farally injured on July 10 by a falling girder at a new needle factory in course of erection at Nuncaton. Alfred James Russell said he warm charge of the creetion of ironwork in connection with the factory toof, and deceased was working with him. Some girders had been put in position, and they were apainting them. These girlers were supported by stanchious. In order to do the painting sprays had to be nemoved and afterwards replaced. While deceased was removing a sprag he accadentally pulled the girder from its position with his other hand, and two girders knocked witness and Carr from the platform. Witness was fast beneath the girder, but deceased was not; his injuries, however were such that he could not move without assistance. Watness helicved the accident would have been avoided for the girder had been fastened. The Coroner: Did you work to the plan of the architect. Witness Yes. Eather extra support or the fasten of tagether of the girder, with ish relates would probable a have prevented the accident. The Coroner's and that in the absence of the architect, he was not gode? to say whether he westight or when. These was smoothing left unlone which should have been in their work. staircase is an important feature, as subordinate is the fire-escape stairway. The Building Acts lay down certain rules. The main fireproof stairs are required to be enclosed in fireproof material, all com-munication to the works being by doors opening outwards, with special bolts and fittings. The exterior fire-escape stairs are constructed throughout of iron and steel, and escape doors or special windows are arranged. It may be required, both as to the internal and external stairs, that escape, in emergency, can be made on to the roof. In the internal staircase all communication doors must be so arranged each scheme on its own morts. The that no obstruction is caused in passages architect the eferadors well to submit his and on landings. The ceiling and side enclosures of fire lobbies must be of fireproof material.

In the accompanying drawing are shown the details of a fireproof staircaso suitable for factories, and arranged in accordance with the regulations. The L.C.C. rules recognise (1) (a) internal incombustible staircases and (b) internal fire-resisting staircases; and (2) external iron staircases. The sketches show a staircase of the "incombustible" type, planned on the 3 ft. 6 in. basis. The general requirements for internal factory staircases demand a 3 ft. 6 in. staircase where the stairs are to be used as escape by not more than 200 persons, and 4 ft. 6 in. for more than 200 total, or more than 100 on any one floor. The door openings are required to be of similar width, and this when opened: and being required to be not less than 13 in. thick, and, say, in practice 2 in., the net width between rebates needs to be either 3 ft. 10 in. or 4 ft. 10 in. All door frames are required to be bedded solid against the fire-lobbies, such as are shown in the drawing, with incombustible material in scheme. In some cases two incomposition walls and ceiling, which may therefore be of brick, concrete, or slabs as indicated. The doors open towards the exit, and are required to be fitted with automatic fittings, and must be in hard wood—such as oak, teak, jurrah, karri, and the like. When the doors of a fireproof staircase are to be used as a means of scape from both sides they should swing both ways. and it is suggested in the regulations, and is obviously desirable, that the upper parts of these doors should be glazed with clear glass, at such height as will enable persons to observe others approaching from the opposite direction. The use and purpose of the fire-lobbies is to prevent the open doors from encroaching upon and obstructing stairways and landings. It is required by the regulations that the stairs of the incombistible type staircase and is obviously desirable, that the upper

Whatever the general arrangement, the I mapple is to fairly listribute the stairways about the premises, affording as 2-cat in 14 runnity as possible for all workers in emergency. It is essential in planning to contember that the regu-lations are, in a sense, tentative. Although certain requirements are scheduled and details, as of stairs construction, with the planner's with the planner's wirk is hable to be set aside; hence the wislom of as estaining, at the earliest P saible in ment, whether his plans are

s cusines ry The plea in the minds of the framers of the Act, as to safety against fire in factories, evidently centred about a fireproof stancase. They certainly had in the way as the first consideration, an "inmbustible" staircase. This, therefore, should receive the architect's first consi lerati in. What there may be demanded in addition to this depends chiefly on the individual character of the proposed building and its surraindings. An easy and obvious way of escape on to neighlairing premises is generally viewed by the authorities as a great advantage, and the existence of such greatly modifies the matter of factory staircase provision Nowadays, however, the exterior fire-scape stairs are very generally required If no third staircase is needed, the fac-tive floors will have an escape at either end—by the solid brickwork fireproof stairs and by the exterior iron staircase Where the external fire-escape staircase is used for intercommunication—i.e., in addition to being merely an emergency fitting—the regulations demand non-slipping treads. It may be required that both, and in some cases all, staircases ran up to the roof. We show this arrangement in our sketch, as an example, although in a building having but one upper floor it is not likely that such will be required. Where the plan is needed, a bulkhead of the kind indicated, usually having, for economy's sake, the roof cut away, merely leaving sufficient head room ever the list flight, is general practice. It is shown of fireproof construction, having concrete flat roof with steel remiorces ment. As to this, the regulations set out that standards should have an iron and concrete colling where they are not carried up above the roof, or where, being carried up above the roof, they are hable attack by fire in an adjoining structure. In the sketches there is provided an emergency door (pening out to the flat connected with the main roof over

Such a stainter as our drawings show So his standage as our drawing show the action and first hoor is a structure enforming to regulations. not more than 2-in, perforations, and a close type of riser is required. The iron handhard must be supported by balusters not more than 6 in, apart. Doors off the landings must open outwards, and not, when open, obstruct the stairway. The drawing shows an emergency escape labler from factory roof to adjoining premises, a way of escape from fire to which the authorities attach considerable value when considering proposed arrange-

### LOOPHOLE DOORS

are a necessary feature in many-storied factories and warehouses. They must be lesigned with reference to the most ready manner of hauling and delivering material. Fig. 3 is a sketch plan, elevation and section of a factory with first and second floor loophole doors and a jiberanc. The hinged flaps are 2 in, thick with strong wrought-iron straps and chains, and are hooked back to door frames, which should be strongly attached to walls by wrought-iron straps built in.
I. ag bar handles, bolted to the door
frames afford hold for men supervising the hauling. A wooden cleat is often provided for ropes, and, in the case of many stories, a wood friction-roller to prevent the chain chafing the window head. The doors are hung in two parts, and have a water-bar to the sash-framed portions. The jib-crane is supported and swings in two bearing blocks bolted to the wall, the chain passes through into the building. and the haulage may be by hand or power, hydraulic gear being the most suitable.

### THE A.B.C. OF HERALDRY.

The close connection of Heraldry with architecture has always been evident to the cultured, and no competent architect will fail to acknowledge the debt of his own art to the Noble Science as a means of architectural enrichment. Not always, perhaps, has he used his opportunities wisely, or rightly understood them, as some of the treaks of the Gothic revivalists perpetrated half a century since bear witness; but these extravagances after all were few, and in some cas s due to the fact that the archit et responsible was content to instruct the various art-workmen that such and such a shield was to be placed in this or that position, or that so and so's badge, cognizance, or metto was to be blazoned or carved here or there, when he ought to have known and made clear exactly the Heraldry he wanted displayed. In other cases doubtless he overdid it, utterly ignoring the elder Pugin's caution, "Don't work it to death!" Again some of us were so certain that Heraldry was part and parcel of Gothic architecture that when the Classic revival set in something like a settled conviction that Heraldry was out of place in Classic buildings led to neglect of the Science and its resources. There was surely no justification for that. If Heraldry is really of use—to put it on the lowest ground-to express facts in connection with the art and life of our modern times, it is as safe and wise to use it now as ever, if only we abide by the sound principles of the heralds of the golden age of Heraldry, and ignore the vain conceits of the formalists who during the decadence which lasted from the sixteenth century down to the middle of the nineteenth. There is no lack of good examples left to us, and the architect who will study them and familiarise himself with the alphabet of the Science will find it well worth his while. If he desires to give historic character to his public buildings Heraldry will enable him to associate with his work the benefactors, statesmen, potentates, and

citizens connected therewith. In metal

citizens connected therewith. In metal work, sculpture, glass, decoration, mosaic, and other accessories Heraldry will help all good designs. But it will not excuss the failure of rash or ignorant experiments. We do not care, for instance, to see Heraldry apphed externally in colour by means of encaustic tiles let into a portion of a façade faced with rubbed ashlar. Even internally colour is undesirable unless this can be kept up and balanced in There its many beaks on Heraldry some so recondite that only enthusiasts

A NORTHERN CATHEDRAL

At the exhibition of the Royal Photograp'ac Society, in the gallery of the Royal Society of British Artists, Suffolk Street, Haymarket, S.W., a lantern lecture on "A Northern Cithedral" was given by Mr. E. W. Harvey Piper, Hon.M.S.A., on Saturday evening last, Mr. G. Lamley, F.R.G.S., F.R.P.S., occupied the chair, and in introducing the lecturer remarked that for at least fourteen or fitten years past Mr. Harvey Piper had given them at the Society's Exhibition a discourse on the architectural characteristics and historical characteristics. Society, in the gillery of the Royal Society of on the architectural characteristics and histori

 if needents of some great English cathedral.
The op a ng sentence of the address, which
was illustrated by between eighty and ninety photographic slides, showed that the differ to be described would be Durham. " Beauti ful for stratum the joy of the whole earth, is, the scaturer remarked, the Banedictine Master Church of Christ, the Virgin Mary, and Saint Cuthbert. Its position is unrivalled in England for stern splendour and

magnificence of effect, seated, as it is, on the rising point of a sandstone rock at the apex peninsula formed by the of a narrow ings of the River Wear. The masses of grey masonry are flat and austere in outline, but i crown of three broad and beautifully incerproportioned towers, together with a cluster of steep pinnacles flanking the gables of the wide eastern chapel, impart to the edifice a regal and unmistakably English aspect, Immediately to the north of the cathedral church, but separated by a broad open space, the duge keep and long level line of lofty bastioned parapets of a castle frown npon the rapid and shallow stream beneath, contrasting in their bare severity with the rugged and well-wooded cliffs in the foreground. As we gaze upon the group, a veritable union of Church and State, from the railway line upon the opposite bank of the river we realise that here has been a frontier settlement on an important military position.

As cathodrals go, the history of Durham s a short one, extending over but 920 years, out the cathedral is in the line of succession of a much more ancient and extensive see, arst of Northumbria and then of Bernicia. The present church is the third built on Dunholme, and was begun by Bishop William de St. Carileph in 1095. At his death, six the St. Carrieph in 1099. At his death, six years later, the choir, with its three apses, the transepts and eastern bays of the nave had been built. The choir was completed by 1104, the walls of the nave had been erected by 1128, and five years later the stone are the stone of the nave had been erected by 128. vault had been added to it. Between 1170 and 1175 Bishop Hugh Pudsey, foiled in his attempt to build an eastern Lady-chapel beyond the apses by the occurrence of fissures in the walls and foundations, constructed the unique Galilee chapel between the west front and the cliff verge, and more than sixty years later, between 1242 and 1278, the eastern apses were removed and replaced by the noble eastern transept known as the Chapel of the Nine Altars. The western towers, raised to roof level in the lays of Stephen, were carried to the present height early in Henry the Third's reign, and the central tower was several times recased or reconstructed, the lower story to the ringers gallery having been repaired, if not rebuilt, about 1470, and the upper story added twenty years later. Just a century Lefore that work of completion in 1390, Bishop Skirlaw began the rebuilding of the Norman clossters, a work which was Norman closters, a work warm was not finished for eight-and-twenty years. Few other important changes were made in the athedral till the time of the Restoration. From the first, all the vaults had been of stone, and the chief alterations were to stone, and the chief alterations were to secure better lighting and at the same time to bring the tracery of the windows into the fashion of the day. To Bishop Cosin, appointed by Charles H, we were inbted for the magnificent font cover and the stalls, and to his dean, Dr. Sudbury, for the conversion of the monks' dormitory into a blurary. Cromwell had utilised the choir in 1650 for the housing of Scottish soldiers taken at Dunbar, with the result that the or smashed by the interned men, and seven years later the wooden spires which added so greatly to the picturesqueness and imposing character of the western steeples were demolished, never to be re-

\* The following illustrations of Durham Cathedral have appeared during recent years in the BUILDING News —Plan of minister and monastic buildings (by late Rev. Mackenzie E. C. Walcot), March 3, 1876; plan of cathedral, May 16, 1884; photographic view from W.N.W., October 24, 1890; in the close, looking towards central tower (from a water colour by Charles Divon). placed. The evil genius of Durham was the placed. The evil genus of Durham was the blatant and ignorant self-styled "architect," James Wyatt, who, after he had wrought irreparable mischief at Salisbury, Heretord, and Lichfield, was called in here to advise Bishop Shute Barrington. Wyatt pared down the external masonry, obliterating its original ways and ing its original vigour and ornamentation, removed tracery and stained glass from most of the windows, and rebuilt doorways and pinnacles in a debased form of Church-wardens' Gothic. He devised, and his successor Morpeth carried out, the mutilation of the incomparable chapter-house, and only by the protests of John Carter was Wyatt pre-vented from removing the Galilee chapel in order to provide a drive for the bishop from the Castle to the western doorway. Anthony Salvin, who rebuilt the keep of and restored the cathedral choir in the late and restored the cathedral cloth in the late forties of the last century, was but little better informed than Wyatt, and the earlier work by the late Hodgson Fowler, say the dozen years from his appointment in 1864 until his restoration and refitting of the edifice, completed in the summer of 1876. was by no means free from blame. But Fowler grew in grace, in taste, and in discretion with the widening of his archæological and ecclesiological knowledge, and during the last four-and-thirty years of his long career as architect to the fabric proved a zealous and well-informed conservator of its that Mr. Edward R. Robson, who preceded Mr. Fowler as architect to the Dean and Chapter, resigning in 1864 on his removal to Liverpool, and subsequently acting for many years as architect to the London School Board, was still living in retirement, having attained an advanced age.

Looking at the plan, it appeared at first sight one of the donble-transepted patriarchal cruciform type of English cathedral, such as we possessed at Canterbury Lincoln, Salisbury, and Worcester, but lack ing the eastern projection of a Lady-chapel, which seemed to be tacked on to the western front. The choir was of the usual four bays of the larger English Benedictine churches, such as we see at Ely. Norwich. Peterborough, St. Albans, and Winchester: there were short transepts with eastern aisles, as in the last-named cathedral, and an all-inadequate nave of eight narrow bays, with cloisters and the buildings of a Benedictine monastery in the usual position, south of the nave. In dimensions, Durham ranks sixth among English churches, being a little less in area than Ely or Westminster Abbey, and considerably more spacious than Salisbury.

Mr. Harvey Piper then proceeded to conduct the audience on a tour around and through the cathedral, elucidating the various features described by throwing simul-taneously upon the lantern screen behind the taneously upon the lantern screen behind the platform drawings by John Carter, 1785: G. F. Robson, 1828; John W. Billings, 1832; and C. Clement Hodges, and photographs by Messrs. Edwin R. Bull, W. Ellison, T. W. Freshwater, J. Patterson Gibson, W. H. Hirst, J. W. Hodges, Mark Holloway, T. M. Cargo Lland. Grose Lloyd. Newton and Co., Photochrome Co., James Valentine, G. W. Wilson, and other experts in architectural camera work. The cathedral and castle, as depicted from the opposite bank of the Wear were shown from various standpoints, and it was remarked that the view from the south-west, with the abbey mill and weir in the foreground, had, perhaps, been more often sketched, painted, and photographed than any other combination of buildings and land-scape scenery in the United Kingdom. Another excellent prospect, but lacking the river, is that from the south-east gained from St. Oswald's Churchyard, and a third. from St. Oswald's Churchyard, and a unita, of which advantage had been taken by Mr. George Brown in a beautiful bronnoil print No. 1) on view in the lecture-hall, was halfway down Framwellgate Street. From the pppsite bank of the river looking W.N.W. a comprehensive idea of the general grouning

behind the 2 beautiful bea height among the services of the cathedrals, was disfigured, the services of St. Albans, by a casing of plaster, are the services temporal in 1859, under the arive of St. Gilbert Scott. boss differ the arry ce of sixtenery seem who, by the way, was react with: a to the Dean and Chapter, is is erroneously stated in most guidebooks. The fecturer surposted that if the lower part on of the central lower of the restriction of the central lower of the surpost of t were opened out it would possibly be revealed, as Mr. W. D. Carochad found during the repairs to the Bell Harry tower of Cancerbury, that much Norman or Early English with it. hsh worked masonry existed beneath the outer shell. The broad vestern towers are, inke those of Wells, although not to the same extent, boldly projected beyond the assle walls, and a piquant contrast is pro-vided by the arcaded surfaces of the Early Thirteenth Century upper stories to the massive treatment of the Norman bases. Pudsey's Galilee Chapel is kept so low as not to obscure the lighting of Carileph's nave through the elegant although incongrnous window cut through the west wall by Abbot Fosser.

Passing round to the south side, the Monks' (or, as it is now called, the Dean's) Kitchen, built by Abbot Fosser in 1579, is seen to be ount by Amor Fissar in 1 10. Is seen to be im perfect preservation; it is an octagonal building of stone with central chimney, and greatly resembles the equally well known one at Glastonbury, also constructed for a Beneat Clastonbury, also constructed for a Benedictine abbot, some four or five years earlier. Passing into the cloister garth, it was remarked that it was the third built on the site, the work of Bishops Skirlaw and Langley, in the thirty years 1390-1420. The agnoble tracery in the unglazed panes was one of the numerous local memorials to Wyatt's meddling. In the centre is the stump of a former lavatory of marble, which curried before the Dissolution a number of brass spouts discharging water and overhead a dovecote tower. Excavations made be-tween this fountain and the north walk of walk of the cloisters in 1905, by the late Mr. Hody son Fowler, disclosed the foundations of a Norman closter of smaller dimensions. Normal by, and apparently extending under the south aisle of the nave were other foundations, which were not followed up, but which were conjectured to be those of the White Church of Aldhun. On the west side of the Clearch of Aldhun, On the west side of the clois-ters is the mouks' dormitory, reconstructed and refitted in Charles II,'s reign by Dean Sudbmy, under Bishop Cosin, as a Dean Suddiny, under Bishop Cosin, as a library. Among the objects preserved here, and clown on the screen, were a panel containing Early English carved figures, the richly carved head of a twelfth-century cross, both in stone and a Saxon carved capital, probably from the White Church, discovered during recent as a vertices. Both discovered during recent excuvations. Beneath the dormitory is a crypt, or, rather, undercroft, having righty ribbed vaulting carried on short cylindrical shafts, of the same period as the more extensive one at Fountains. The east walk of the cloisters opens into the reconstructed Chapter House originally the largest in this country. was built by Bishop Rufus in 1140, but in 1799 the Dean and Chapter employed one Morpeth to demolish the apsidal east end Morpeth to demolish the apsidal east end, throw the space this gave into the Dean's garden, and build up lath-and plaster walls to afford a more comfortable meeting room for the chapter. Fortunately, John Carter had made in 1785 careful drawings of the house, and under the direction of Hodgson Fowler it was robult on the old foundations in 1890-5, as a memorial to Bishop Lightnoot, the cost help £5,600. On digging over the site sufficient fragments of arcading. the site, sufficient fragments of areading, window jambs, corbels, vaniting ribs, and keystones were found for a reproduction of Carter's shatches. This rations of which, together with the truncated room and Fowler's way down Framwellgate Street. From the ppposite bank of the river looking W.N.W. a comprehensive idea of the general grouping of the building, its towers and chapels, is obtained. The central tower owes much of its ffectiveness and power to dominate the land-cape to the addition made in 1490 of the general groups in the truncated room and Fowler's new work, were an existing the street in the east end, in which every bishop from Pulsey to Barrington had been enthroused, and which was be acceeded that the architecture cape to the addition made in 1490 of the

It houses a tawdry pseudo Ninex, font, executed fifty years also, and it lecturer suggested that it would be well, it he Dean and Chapter could persuade the Vicar of Pittington, near Durham, to return Cosin's marble chalice, with shallow fluted bowl, t the minster from whence it was ejected forty years ago. The areades of Durham nate are years ago. The areades of Durbam nate an supported by clustered piers and massive on cular columns alternating; the latter are variously ornamented with deeply increed patterns of vertical flutings, chevrons, and lozenges, each opposite pair being treated alike, and in the choir and transepte a spira device similar to that on a pair of columns in Norwich have was to be found. As to the channelling here and at Waltham Abbey and Lindisfarme, it had been hotly debated by archaeologists and practical masons as to whether they were incised before or after the shafts were erected. So far as Darham was concerned, the point might be regarded as settled, for close inspection had denot, strated that the deep grooves were cut through the stonework irrespective of the masonry joints, rendering it certain that the curvers wrought upon them after the masomy was set up. The triforium and obrestory are was set up. The triredum and decresory are kept comparatively low in relation to the nave, and thus contribute to the good proportioning. One of the most interesting features of Durham nave is its quadric ritie vault, erected between 1128 and 1133, and the earliest of these high stone roofs of great span (with the exception of the transepts here. It is evident that the original proposal was to cover in the nave with a wooden ceiling, sac as we see in the contemporary B-nedictine churches of Ely, Peterborough, and St. Albans, for the corbels on which the vaulting shafts are carried are clearly inserted in the shafts are carried are clearly inserted in the wall as afterthoughts. The transverse arches over the nave are slightly pointed, an early example of the use of this form; but the diagonal ribs are segments of circles. In the nave triforium passage arches of masonry in the roof being employed to uphold the outside wall at a high level and tengenit the threat the night result of the control of th level and transmit the thrust to a pier against the external wall at the triforium floor level the external wall at the triforium floor level A later development was to carry the ard from the pier to the outer wall as the flying buttress so familiar in Canterbury, Westminster, Norwich, and elsewhere. Turning back to the Galilee, it was seen that the masons employed by Cardinal Logby is strengthening the four arcades with two additional columns to each pier so closely followed the mouldings of 175 that it was not easy to defeat the row work except by the different texture and line of the fresh stones. Bishop Cesin's return stalls at the choir screen, carrying the case of Febber Schmidt's organ, which replaced a nech example of the first stalls and the first stalls are the first screen. screen, were lestroyed in 1845 by Schin. The choir screen was replaced in 1876 by the present one by Hodgson Fowler, which profe ably looked effective as an architect's design, and has but three faults unfitting it for its position-the style, Advanced Decorated, an exotic at Durham; the material, shining alabaster, equally exotic; and the clumsy

proportious. The pulpit erected at the same period is also a terrible example of inharmonious style, materials, and proportions. Looking along the transepts from south to north, Abbot Fosser's elegant six-light win-dow of 1505 in the north wall, and Chantrey's kneeling figure of Bishop Shute Barrington, 1826, the patron of Wyatt, were rington, 1826, the patron of noted, and the scene shifted into the choir. Here, again, the problem of the vaulting had aroused long and bitter controversy aroused long and bitter controversy, but examination of the masonry would demonstrate without possibility of disjute that when the Chapel of the Nine Altars was added the eastern bay of the choir and parts of the choir aisles were remodelled in the new fashion, the beautiful blend of Early English merging with and into the Decorated style, and that a new vault of this character was constructed over the entire thoir and the eastern chapel, new chapel and the reconstruction This involved were in progress between 1242 and 1278. In the four or five years ending in 1380 two important additions to the finish ing and ornamentation of the choir. had added greatly to its interest and beauty were in progress, the ponderous episcopal throne or tribune, with tabernacle work and tretoil cusped canopy, built by Bishop Thomas de Hatfield, who fought at the siege of Calais and the Battle of Neville's Cross, and which had recessed within it the prelate-warrior's own altar tomb, constructed in his lifetime; and the rather wiry open screen between the high altar and St. Cuthscreen between the high altar and St. Cuth-bert's tomb, built at the cost of John Lord Neville of Ruby, of Bedfordshire clunch stone, worked in London and transported thence by sea and rivers. Opposite the Hat-field throne and tomb, just east of the northern choir stalls, there has been erected a cenotaph altar tomb and effigy to Dr. J. B Lightfoot, commentator and divine; the memorial of black and white marble is similar in style to that to Hatfield, but is more elaborate in character, Designed by the late Sir Boehm. it was completed after his death by Mr. Alfred Gilbert. Bishop Cosin's beautiful choir stalls and organ case, con-structed in 1632-70 by James Clement, of Darham, in a blending of Tudor and Jaco-bean detail, were exhibited on the screen from a drawing by J. W. Billings as they appeared before Anthony Salvin destroyed the return stalls and Father Schmidt's organ case and threw the choir open to the nave. and as they now appear after being restored and set back by Hodgson Fowler, who also designed the new divided organ cases.

Turning eastward, the audience were vited in the imaginary perambulation of the edifice to descend a couple of steps behind Neville's altar screen into the elegant and spacious Chapel of the Nine Altars. The only other extension of like character (except the much later one at Peterborough) is the like mond chaper at Fountains Abbey. built by Abbet John of Kent between 1220 and 1247, and therefore in course of completion during the first four or five years the Durham chapel was being constructed. view into the roofless ruins of the Fountains chapel showed a similar plan, with in each case wide lancets in the walls above an elaborate to foiled and moulded areade, and in the eastern wall three bays each containing three windows, beneath each of which was formerly an altar; but whereas in the earlier Cistercian example lofty circular columns. centrally placed, once supported the vault here at Durham the sexpartite vault is carried over the chapel without intermediate piers. The great height of the Hurham chapel, the abundant lighting, the slenderness of the freestone and Frosterley marble window shafts and vaulting ribs, and the elegant hell-necked foliage capitals all conelegant in the necked to large capitals all contribute to the refinement and beauty of effect of Thomas de Moises' work. The huge rose window in the esstern gable, although deprived of its original tracery and stained glass by the detested Wyatt, still added by its fine proportions much to the magnificence

\* See measured drawings of the Nine Altars Chapel at Fountains Abbey and plan of entire establishment, by Friest Woolhouse, in the Bulling News for September 16, 1898.

The most interesting feature of the interior. at the interior was the great feretory of St. on the interior was compled a great part of the aestern wall. Unfortunately the Jacobean screens creeted around it, replacing the scre as erected around it, replacing the gorgeous shrine destroyed after the Reforma gorgeous sarine destroyed after the Kelorma from, were swept away by Salvin, leaving a bare rectangular tomb. The relies of St. Cuthbert removed from the innermost coffin of the saint in 1827, including his stoles and a gir-fle, his bracelet, pastoral cross of gold. oaken and silver altar tablet, and ivory comb, were now exhibited in the Library Museum The outer coffin of oak, constructed in 1542 and of which a photograph was shown on the screen, was transferred at the time of the exhumation to the kitchen of Durham Castle where it still remained. The lecturer suggested that it would be a gracious act on the part of the custodians of the coffin, probably he council of Durham University, to restore this valuable relic to the Dean and Chapter. since its most appropriate resting place would be on the saint's tomb. Below the elegant north window of this church is the statue of Bishop William van Mildert, the last of the earl-bishops( and the benefactor to the university, who is shown by the sculp John Gibson, as attired in bob-wig and lawn shoes, and seated with a closed book in his hand. The concluding views showed details of the arcading, a capital. the rose window, and vaulting, and the lec-turer quoted from Marmion, Scott's eulogy turer quoted from Marmion, on the Grey Towers of Durham now carved on a panel upon the Prebends' Bridge in the

Yet well I love thy mixed and massive piles, Half church of God, half castle 'gainst the Scot: And long to roam those venerable aisles With records stored of deeds long since forgot.

# -0-PAINTS DESIGNED TO PREVENT ELECTROLYSIS IN CONCRETE.\*

The use of a paint as a protective covering steel against damage by elcc reinforcing trolysis has often been proposed, but the writer is not aware of any tests having been made to determine a type of coating best adapted for this purpose.

Paints having a high insulating value are generally those drying with a high gloss, which is apt to prevent proper bonding, a fact which has undoubtedly prevented a general use of this protection. A method for general use of this protection. overcoming this objectionable feature was de-

veloped by these experiments.

Corrosion Causes.—It may be well to review briefly the causes of corrosion in reinforcing steel for the benefit of those not thoroughly familiar with the subject.

The ordinary forms of iron corrosion have been found to be due to auto-electrolysis, the presence of segregated impurities being responsible for differences in potential at certain areas, which set up galvanic action and cause solution and the formation of rust at the positive nodes. A similar but more rapid action takes place when an electric current is passed through an iron anode immersed in an electrolyte, such, for instance, When damp cement contains as salt water. an embedded iron anode the cement acts as an electrolyte, and the same rusting action takes place, regardless of the fact that concrete contains sufficient lime to inhibit corroion when no electrical currents are present. With the electrolytic change of metal into oxide comes an increase in volume of the products of reaction, and there is developed an enormous expansive force of mechanical presumability in the creative or the constitution of the production of the product of the constitution of the product of the pro sure, which is sufficient to crack the strongest forms of concrete.

Engineers are active in their endeavours to prevent high-voltage currents from running wild, but this fact does not justify a dis-

regard of precautions against stray currents.
Preparation of Specimens and Methods of Testing -The tests were made on two series specimens as follows:--

Rods ; in. by 12 in., painted two coats and embedded in concrete cylinders.

2. Rods \(^3\) in. by 12 in., embedded as anodes in cylinders of concrete.

All cylinders were \(^3\)\_2 in. by 8 in., of coment mortar 1:2. The moulds were re-

Abstract of paper by Henry A. Gardner, Assistant Director of the Institute of Industrial Research, Washington, D.C.

moved in two days, and the cylinders aged from one month.

Tests on Series 1 were made by immersing the lower 2 in, of the specimens in water, connecting them in parallel, and passing through them a direct current at 30 v.

Observations were made for one week, when small cracks began to show near the bottom

on a few specimens.

The specimens were then immersed towithin 1 in. of the cylinder tops, the current turned on, and observed for ten days. Cracking was shown by every cylinder carrying an appreciable amount of current, the fracture starting at the anode.

Wherever the protecting film broke down the increased passage of current resulted in rapid corrosion of the steel, followed by the expansion and bursting of the concrete-

cylinder.
Series 2 were tested by placing them in individual earthen jars containing sheet-iron cathodes coiled around, but not touching, the cylinders. The jars were filled with water to within 1 in, of the top of the concrete.

The cylinders were connected in Series 1, and current passed at 30 v. for 240 hours, when seven specimens developed cracks. The voltage was increased to 55 v., and continued for sixty hours.

Observations on Tests .- In the specimens in which cracking occurred the anodes showed considerable rust, the paint coatings having been broken down. On the cathodes in Series 1 the paint coatings were still intact. although some had apparently been affected by moisture and the hydrated lime in the wet concrete, chalky surfaces being shown.

The coatings on anode and cathode bars which were embedded in cylinders which did not crack and which carried little current, were in a good state of preservation.

Bonding Tests.-In order to determine the comparative bonding strength of rods coated with the various paints a duplicate of Series 2 was made, with the exception that the rods. were placed flush with the bottom of each cylinder. At three weeks the specimens were placed on an iron block drilled with a 1-in, hole and tested in a Riehle<sup>2</sup> testing machine. Some paints that proved to be good insulators failed to show bonding strength, and rice versû. When painting rods in order to overcome the objection to using paints which dry to a gloss surface and prevent proper bonding, these coatings were dusted while tacky (not wet) with sharp particles of sand, which formed a rough surface, assuring a good bond. The corrosion of metal embedded in concrete structures, by stray currents of high voltage, is often productive of serious effects. The use of properly made paints upon such metal constitutes a safe-guard that should not be neglected by the Such paints may be prepared from engineer. the following substances

The vehicle should contain : Boiled or bodied oils or products which dry

to a fairly saturated film. Oils which dry by semi-polymerisation rather than oxidation.

Oils which dry to a flat rather than a

highly glossed surface. The solid portion should contain a percentage of :-

Pigments which are coarse, and which, therefore, tend to form films having a rough surface.

Pigments which are inert, and which do

ot act as conductors of electricity.

The painted metal should be "sanded," if

possible.

Mr. F. H. Tulloch will hold a Local Government Board inquiry to-day (Wednesday) at Skelmersdale into an application by the urban district council for sanction to borrow £2,000 in order to provide a new gas holder

Sixteen new houses have been erected under the Housing of the Working Classes Acts by the Llandadno Urban District Council. The contract was let to Mr. Luther I November last, and all the houses Roberts have November last, and all the houses have been occupied by tenants this week. During the past eighteen years the council have erected 67 houses at the total cost of £15.712. The council have in their possession land in King's Road on which 27 additional dwellings can be

# Currente Calamo.

The Professional Classes War Relief Council have undertaken to organise a Christmas Fair at the Albert Hall for the purpose of raising funds for the relief work of the council. The Organising Committee will be assisted by committees representing the different professions, and a committeeknown as "the Architects' Committee "has been formed to represent the professions of architecture and surveying. The committee invites architects to join, and to otherwise assist by giving publicity to the project. It is also desired to call the attention of all architects and others to the great importance of attracting visitors to the exhibition which is now open at the Maddox Street Galleries. The proceeds of sales are devoted to the relief of painters and architects who are suffering from the effects of the war, and if every reader would persuade at least one friend to visit the exhibition with a view to making a purchase, the relief funds would be greatly benefited.

The R.I.B.A. Journal gives fuller particulars with regard to the Kingstown Urban Council competition scandal, on which we commented a fortnight ago on this page. The appointment was in connection with a housing scheme estimated to provide 274 habitations, and the architects' duties were to include preparation of all plans and specifications, supervision of the work of erection, attendance at all Local Government Board inquiries and meetings of the Council and Committees, and preparation of documents for the Local Government Board inquiry and for carrying out the scheme, "at a fee, to cover all the work, of 21 per cent. on the accepted contract." It was stipulated that "in the event of the scheme being altered or not sanctioned by the Local Government Board, or abandoned altogether or in part, then no fees whatever shall be payable to the architect save for that part of the scheme gone on with by the Conncil and completed.' A deputation from the Institute of Ireland waited upon the Housing Committee and urged such modification of the conditions as would secure to the architect a fee of 5 per cent, on the typical house of each group. This, they explained. would preserve the 5 per cent. principle, and would mean only a very trifling increase in fees. As regards the provision that no fees be paid on abandoned work, its manifest injustice was pointed out, and the deputation asked for an alteration of the clause so as to ensure payment of a reasonable fee in case of abandonment of a scheme for which designs had been prepared. The deputation hoped that their representations had been favourably received, but have been disappointed to find in the revised conditions since issued that while 5 per cent, on each typical house has been agreed to, the commission on repetition work has been reduced to 2 per cent. Further, as regards abandoned work, the only concession granted is that the urban council "may consider a reasonable claim for money expended by the architect," In view of the unsatisfactory nature of the revised conditions, the council of the Institute of Ireland have passed a resolution recommending members not to apply for the appointment, or, in the event of their having done so, to withdraw their application. The terms of the resolution have been communicated to the town clerk, ring and unnecessary costs of renewal. There Kingstown, and to every member of the In-titute of Ireland. It is hoped that the stand the making of title on sale or mortgage of an

taken by the profession in Ireland against. these unfair conditions will have the stead has the stead fast support of their brethren in other parts of the kingdom, and that all British architects will refrain from applying for the position until the conditions are rectified.

The Iron and Steel Institute is about to follow the example of certain other British organisations with foreign members in clearing enemies from the roll. When the Institute holds its autumn meetings on September 23 and 24 the council will notify their intention to submit at the annual general meeting next May a new rule providing that if the war is then still in progress, all members, honorary members, and honorary vice-presidents who are subjects of an enemy country shall forthwith cease to hold any position in the Institute, the question of reinstatement being considered when peace has been concluded. A similar course should surely be taken by all our learned societies. It has not yet. The Chemical Society includes Germans, the council baving resolved by a large majority that, whilst regarding with the deepest detestation and abhorrence the ruthless and barbarous methods adopted by Germanic allies, and more especially the debasement of chemical science by their latest operations, " no steps can, consistently with the dignity of the society, and with due regard to the British idea of justice. be taken in the above direction until after the cessation of hostilities.

The Bill recently introduced into the House if Lords by Lord Haldane to amend the law with regard to property and sectlements is published. It is mainly the same Bill as that introduced last year with some amendments and additions. These embrace certain details in connection with the conversion of perpetually renewable leaseholds into long terms (clause 43); provisions as to corporations sole (added to clause 55); local land charges (clause 66); protection to purchasers acting without notice of a fraud on a power added to clause 69); enlargement of long terms (clause 71); power to reduce the fees on registration of title to land acquired for street improvements (added to clause 140); provisions for getting in bare legal estates left outstanding where registration of title to land in a compulsory area has been omitted (added to sixth schedule, clause 6); and extension of the time for registration of the title to land in a compulsory area (added to tenth schedule, Part II., clause 10).

The object, we are told, is "to facilitate the transfer of land " All land is made subject to the law relating to ordinary freehold land. This is effected by enfranchising all copyhold land, subject to compensation to the lord of the manor for any loss which the abolition of the incidents affecting copyhold tenure entail on him, being paid by the tenant or secured by a rentcharge, and to compensation to stewards of manors for the abolition of their office. (The compensation will, except in very small cases or where the parties otherwise agree, take the form of a rentcharge.) Special enstoms affecting the descent and alienation, etc., of freehold land are abolished, and, incidentally, fines, heriots, and similar incidents of special tenures. Perpetually renewable leaseholds are converted into leaseholds for terms of 2,000 years, thus avoiding constantly recur-

When Border rails were common Hutton must have been a valuable stronghold, strategically and otherwise. To day it is a beautiful old residence, carefully preserved, and equipped on lars that meet the needs of the present day.

Mr. Vicary Gibbs gives some interesting particulars in the Gardeners' Chronicle with regard to the harmful effects of certain grasses and weeds around the roots of young forest trees, confirming some experiments made at Royston in 1912, and quoted from the Journal of Forestry. The result at Royston was as follows, taking 1 that the percentage of growth in the two clean plots. The least harmful of the ground coverings proved to be the creeping butterenp, where, however, the percentage of growth of trees was only 52, or little more than half that in the clean ground. The next was the stinging nettle, where the percentage was 41. In the case of plots overed with various grasses the percentage ranged from 33 to 13, the covering of the ground which proved most detrimental to tree growth being couch grass and perennial rye grass, in which two cases the rate of tree growth was 15 and 13 per cent, respectively. There appears to have been but little difference in the effect of the various crops on the ashes as distinguished from the larches. A photograph of the ashes and their foliage, which accompanied the paper, brought out very markedly the difference not only in height of the trees growing on clean ground, but in the colour, size, and appearance of the foliage

Mr. Vicary Gibbs' own experiments at Aldenham - made unintentionally fully confirm the foregoing. Some eightien years ago he planted a row of fourteen maples Acer Schwedler: Twelve of them stand on lawn, being planted in holes 6 ft, a ross, which are kept clean and free from turf, and weeds. At the time of planting the city was removed and the holes filled with good light loam. The thirteenth stands half on lawn, half in a shrubbery where the ground was well trenched; the fourteenth stands wholly in trenched ground. About the same time hoplanted fourteen copper beeches, and in this case, too, the conditions are the same, twelve trees being in a field, the thirteenth on the

## Our Office Table.

It is perhaps not as well known as it might be that at the request of the Dean and Chapter of St Paul's and of the Surveyor to the Fabric certain architects have undertaken to watch the cathedral, with the object of ex tinguishing fires that might be caused by aerial bombs. During the winter months it will be necessary to obtain more help, and any who will volunteer for one whole or two half nights a week should communicate with Mr E. Drower, 28, Victoria Street, Westinger ster, S.W. It is hoped that the watch of this national monument may be undertaken by members of the architectural profession. It is necessary to secure another 120 volunteers.

In the current issue of the "Journal of the Royal Institute of British Architects " is published a fifteenth list of members, licentiates, and students enlisted in the Army or Navy for the period of the war, the total to date being 44 fellows, 325 associates, 161 licentiates, 209 students, and two hon, associates ciates. The roll of honour of those on active service includes architects in practice, their assistants and pupils, and teachers and stu-dents of the architectural schools. Definite proposals are before the council for the per-petuation of these names by inscribing them in a permanent form on panels to be fixed on the walls of the staircase leading to the library at No. 9, Conduit Street.

The Curator of the Guildhall Museum, Mr Bernard Kettle, reports that when the old General Post Office in St. Martin's le Grand was demolished a large series of Roman rub-bish pits were disclosed. The lowest portions of 120 of these were carefully excavated. The finds included a few whole pots and many thousands of fragments of Samian and coarse pottery, besides building materials, what stones, beads, knives, coins, and other small objects. It has been possible to assign dates to most of the holes—between A.D. 50 and 200. By the association in the same hole of dateable with undateable pottery light has been thrown upon many types of the latter. Last summer while the buildings 3-6. King William Street were being demolished another series of five large Roman pits were uncovered. From the fragments thus obtained nine Samian vessels of the First Century have been pieced together, and are now in the Guildhall Museum. These include a decorated vessel Museum. These include a decorated vessel finer than any previously found in London, and two specimens of a shape unknown hitherto in England. A lamp, two coins, and other objects of pottery and bronze were also obtained from this source.

The last remnants of the great Franciscan Priory, near Lewin's Mead. Bristol, a two-storied house, with some 14th Century arches the full height of the building, is about to be demolished. For many years—from 1809 on-wards—it was used as a Baptist Sunday-school in connection with King Street Chapel, and is now known as Ivy Cottages. The building, which runs north and south, has been structurally altered by the addition of floors, partitions, and windows, and is now divided into two dwellings under one roof. Mr. T. Pope's measurements are 36 ft. 6 in. by 11 ft. 6 in. in the clear, and the height, from ground floor to apex of roof in the clear, is about 29 ft. There appears to have been an outer lobby at the back of the building, from which access from the ground floor to the land on the ligher level was gained by means of a flight of steps. Portions of the wall of this outer hall still exist, and on the higher level there are remains of an original wall and buttress. There seems to be very little doubt that the old building was divided by a floor into two apartments. The upper floor, or Greyfriars' Hall above referred to, was lighted from the west by the two Pointed windows. These windows have been re-cently revealed as a consequence of careful examination of the old building. Mr. considers them to be of Late 14th Century date, and the mouldings show them to be of good type.

A Works Pupils' Certificate (Building Se. tion) of the University of Sheffield (Lecturer, Mr. W. S. Purchon, M.A.

A R I B A collins ARTBA: has been arranged by the University in consultation with the Sheffield. Master Builders' A-so ration to meet the pot-requirement of tudents who are working 640 with the object of becoming master builder and jet or of occupying other important positions in or of occupying other important positions to building businesses. The course has been arranged on the lane of the Works Pupil.' Certificate Course in Engineering, the stu-dents attending the day courses of study at the University during the winter six months (October to March inclusive), and at works during the summer six months (April) to September inclusive. A Works Pupils Certificate (Building Section) is awarded to students who complete the three years comes and pass the necessary examinations. The next session be, in- on October 1, 1915, and the entrance examinations for candi dates under twenty years of age, who have not passed an approved examination, will be held at 10 am on September 20 and Octo ber 1. If further particulars of this course of instruction are required, application should be made to the lecturer, either by letter or by appointment, at the University

Mr C F Gettings, the chief surveyor roads for Worcestershire, has just issued hiannual report, which covers the period of twelve months ended March 31 last. He states that the estimate for the year was £103,005, but £5,354 less was unexpended, as although the full quantity of work provided for was carried out, the conditions were rather more favourable than was auticithe conditions pated. Apart from the Road Board scheme, the committee had had strengthened some of the weaker roads in districts taking a fairly heavy traffic. There were now motor bus services running over 192 miles of main roads in the county, the whole of which have been put into operation since September, 1912. Over the Birmingham and Hales 1912. Over the Birmingham and Hales Owen Road the motor traffic has increased from 1.754 tous in a week in January, 1913. to 8,484 tons a week in May this year. The work in connection with tar-painting was extended during the year, some 94 miles being treated at a cost of about £5,000. Rather more than one fifth of the total mileage of rural main roads were now surface-tarred,

Instances are on record, says a writer in the Contract Record, of Toronto, where of pigment paints have been effectively used to stop the dusting of cement floors brought about by abrasion. If the floor has been about by abrasion. If the floor has been freshly liid and is damp, the possibility of lime relation (supportfying the oil in the paint may be removed by first treating the surface with a solution of finited zine sulphate as a primer. Boiled based oil, sometimes mixed primer. Boiled finseed off, sometimes mixed with Chinese wood oil, may be used as the liquid portion of the paint. These oils bave a remarkable landing action when applied to a cement surface. When mixed with jugment, they form points which are eminently suited as first coaters for ceacent floors. The first coat will dry rapidly and form a dense surface. Over this may be applied a second coat, and, if a high gloss surface is desired, a portion of variash may be added to this

Smoke, soot, dirt, etc., are very apt disligure stone masoury soon after crection, necessitating periodical cleaning treatment. One of the simplest and best methods of removating the surface is to use the following wash, which is easily made and applied Prepare a wash of soft water and about 1) bars of common laundry soap. Boil until the soap has been thoroughly dissolved Add a fine, clean, gritty said (white preferred), and may to about the consistency of While mixing, add about five table putty. While mixing, add about five table spoonfuls of ammonia per bucket of water.

ROAD SURVEYORS OF SCOTLAND -At the thest, etc. annual meeting of the Road Survey as a Scotland, held in Aberdeen, Mr. Peter C., k. Dunbar, was appointed president: Messes A. Forbes, Dunfermline, and W. L. Gossa. Dunblane, were elected vicepresidents; and Mr. Allan Stevenson, Ayr. Was applied secretary and treasurer, for thousand year. At the outset of the proceedings Mr. James Watson, Strathaven, the retiring president, occupied the chair, and in the coarse of an address mentioned that seven men bers of the association were serving with his Majesty's forces. The chair was after-wards taken by the newly-appointed president. Mr. Clarke. Discussions took place on several questions of interest to the members, amongst the tapics being the possibility of securing uniformity in the system of keeping road a on to the economics of road surfac-ing, and the best way of obviating the difficulties frequently met with in the filling up of opened road tracks. It was resolved that the next meeting of the association be held in Glaszow in August, 1916.

TWO SEVENTEENTH CENTURY SHEE FIELD HALLS.—The Humber Archaeological Society recently visited two Sheffield houses. Carbrook Hall and Attercliffe Hall, with the Carbrook Hall and Attercliffe Hall, with the old Attercliffe Chapel, which, with the exception of the cathedral, is the oldest ecclesiastical edifice in Sheffield. The former has for the past ninety years been used as a hierased house, and was described by Mr. J. R. Wigfull, A.R.I.B.A. Carbrook Hall date, here of Starbour the starbour of St dates, he showed, from the time of Stephen Bright, whose father, Thomas Bright, of Bradbury, settled at Carbrook about the of the seventeenth beginning. century. built or enlarged the hall, where on the back of one of the fireplaces, are still to be seen his initials and the date 1623. He was builifi of Hallamshire and lord of the manor of Eccleshall. In the seventeenth year of Charles I, he was granted arms as "a person of £1,000 a year estate, of credit and respect in the affections of the gentry, and of extraordinary merit. He died in 1642, of extraordinary merit." He died in 1642, and was succeeded by his son, Sir John Bright who took an active part in the Civil War, i.s.ng to the rank of colonel in the Parliamentary Army. He was appointed Governor of Sheffield Castle after its surrender, and afterwards Governor of York. The out panelled room, said Mr. Wigfull, was once the principal apartment of the house, and the state, in a doubt, of many a conference form of the Civil War. The panelling space form of a calibrate design. At one end of the state of the French Army, was grateful on August 4 last forder of July 301 as a Knight of the Legion of Honour, the state of the state of the Legion of Honour, captain on the large of the Invert was a vice-present. Wisdom trampling upon Ignor mentioned, but it is known that his civil services as Professor and Director of the School of Architecture appear also on the nomination. once the principal apartment of the house,

while Wisdom is typified by a figure in a long tole. Above this room is another great interest. The chapel dates from 1630. It was viiginally ob it, from east to west and 50 it, from north to south, together with in Juste on the north side, but it was con siderably reduced in size in 1857. of building it was £104, and the ground on which it stood—though of much smaller area than that which now surrounds it—was bought for only £3 3s. For many years the chapel was all owed to remain in a dilapidated condition, but about ten years ago it was remained and again adapted for service, while at the same time the city council took charge of the stayeyard and laid it out as an open space. According to Mr. C. Paul, what remains of Atterchiffe Hall is now used as a dwelling house, and is situated on Attercliffe dwelling house, and is situated on Atterelific Road, just past the junction of Old Hall Road. Dr. Gatty states that the hall was demolished in 1868 by Mr. Robert Hadfield, but said Mr. Paul) iccent investigations by Mr. C. R. Vine and Mr. Ward, of Atter-cliffe, show that the doctor was not strictly cerrect. The hall can claim greater antiquity than its Carbrook neighbour. seat of the Spencers, and William Spencer was born there in 1594. His son William became a licutement-colonel in the Parliamentary Army. After the collapse of the Common wealth he obtained a free pardon from the Crown, and was confirmed in the possession of his estates. He invited one of the ejected clergy of 1662, Richard Frankland, to set up his academy at the hall, and the Rev. Timothy Jollie also carried on his school The present remnants of the hall are there. supposed to have been the academical rooms. In one, which was probably the lecture room, is a plaster motto over the lireplace reading, hande thinke Whatsoever thou dost take in of the ende and seldom so shalt thou offend. The rooms contain some very interesting plaster work. The Spencers parted with their Attercliffe possessions some time before 1810. Afterwards the premises were occupied by a firm of spads and shovel manufacturers.

The Secretary of State for India has sanctioned the appointment of a Chief Conserva tor of Forests in the United Provinces.

The Ham Hill Stone Quarries, which Messrs Matchain and Co, offered for sale by auction on the 19th ult, were subsequently disposed of by private treaty at a very satisfactory figure.

The session for 1915-16 of the Architectural Association School of Architecture will open on Monday, September 27. The annual meet-ing of the association itself for the delivery of the presidential address will be held on Monday, November 8.

After being extended and rebuilt, the Mile End New Town Synagoone, Dunk Street, was opened on Sunday. The structure was first erected in Dunk Street, Mile End New Town, in 1885, and it has now been reconstructed at a cost of over £1,000.

A new council school at Tynywern, Tre-Thomas, built at a cost of £10,500, has been formally opened. The designer was Mr. J. Bain, architect to the Monmouthshire Educa-tion Committee, and the contractor Mr. R. W. Moon, Newport, Mon.

Additions are being carried out at the premises of the Ulster Banking Co., Limited, at Tullamore. The building contract has been taken by Mr. James Lees, Great George's Street, Belfast, and the architects are Messis. Blackwood and Jury, MMR.J.A.1., 41, Donescall Place, Belfast.

The rural d strict council of Wantage have adopted a scheme for the sewerage of the village of Harwell. A system of land treatment will be adopted, and the storm water will be separated from the sawage. The presents were, which are defective, will be used solely for surface water, and new sewers be laid throughout the parish for sewage.

Information has been received by the Secretary of the Glasgow School of Art that Pro fessor Eugene Bourdon, Director of the Glas

## Correspondence,

OUR ANCHENT CHURCHES.

To the Editor of the Building News.

Sir.- In the course of a lecture on Romanesque and Gothic Doorways, de-vered by Mr. C. H. Dedman at the Royal Photographic Society's exhibition, he referred to the great risk of dimage and destruction by aircraft to ancient churches, particularly in the Eastern Counties.

After the raid upon Scarborough the local authorities issued requests for photographs of buildings showing their condition prior to recerving injury, and received but a poor response. Yet there are thousands of photographers, both professional and amateur, in the country willing and even anxious to make records at the present time, if they were allowed to do so. In view of the fact that restrictions are necessarily placed upon outof-door photography at the present time, permits would have to be granted by the War Office or police authorities. If such permits were granted loosely there might be a of giving facilities to alien enemies resident in the country, but this danger can readily be guarded against by requiring references from the applicants to the officials of the many photographic societies throughout the land. Personal knowledge of the applicant would be a sine qua non, and the permits would be granted only for special work in specified places.

Our well-known abbeys, minsters, and cathedrals have probably been photographed from every point of view, and records of details secured, though many of these photographs have in the course of time been lost. The smaller ancient churches up and down the country, however, have not received the same attention, although they contain priceless relics of the past, which could not be restored in the absence of large-scale photo-

In some instances a single door, a window, or a few capitals are all that remain of the ancient work, and these should be copied on a scale large enough to show the tool marks. No expense to the country would be incurred, but the co-operation by the Government, the clergy in charge, and the photographer is necessary, and the work should be undertaken at once.—I am, yours faithfully,

J. McIntosh, Secretary, the Royal Photographic Society of Great Britain.

55. Russell Square, W.C., August 25.

[We could help occasionally to ensure per-

manent record if architectural amateur photographers who know what is worth reproduction sent us photos.—ED., "B.N."]

LEGAL INTELLIGENCE.
SUB-CONTRACTORS v. CONTRACTORS.
—Judge Cann has held a special sitting at
Coventry County Court to hear an action
brought by George Nichols, Limited, who were
sub-contractors for the plastering, to recover
£33 16s. from Kelley and Sons, builders, who
were the contractors for the building extensions at Coventry and Warwickshire Hospital
in 1912-14.—Eventually plaintiffs were given
judgment for £78 17s. Id.

-00 Mr. James Zeno Sloan, for the past few years assistant surveyor for Co. Down and stationed at Newtownards, has been granted a commission in the Royal Engineers.

<del>-></del>

Mr. Samuel F. Hynes, F.R.I.B.A., Cork. has prepared plans and specification for works to be carried out at Lisheen church, near Arhadown, County Cork, for the Rev. Jas. O'Sullivan, P.P., tenders for which work have already been sent in.

The death has occurred of Mr. William Macdonald, carpenter contractor, Inverness, who was well known and esteemed in bailding trade circles throughout Scotland. For several branch of the Builders' Federation, and he held a similar position in the Scottish Federation. He took a warm interest in Celtic matters, and was one of the earliest members of the Inverness Gaelie Society, of which he was a vice-president. He carried out extensive contracts in many parts of the Highlands and Islands. Mr. Macdonald, who was unmarried and a native of Glenurquhart, was about sixty COMPETITIONS.

NOTTINGHAM .- The competitive designs for the three new branch libraries which are to be built in Nottingham when circumstances permit are now on exhibition to the public at permit are now on exhibition to the public at the School of Art in that city. Under the terms of the Carnegie gift the Public Libraries Committee proposed to establish new libraries at Highbury Road for Bulwell, on Nottingham Road for Basford, and in Bruce Grove for the Meadows district. Architects engaged in practice in Nottingham were invited to submit designs and sleep Architects engaged in practice in Nottingham were invited to submit designs and plans, and, in all, some fifteen competed, some among them submitting the necessary plans for all three buildings. Mr. J. Alfred Gotch, F.S.A., F.R.I.B.A., of Kettering, who was appointed assessor, has made his award as followed. Highland Book Libert in the control of th follows:—Highbury Road, Bulwell: 1,
Messrs, L. Bright and Thoms; 2, Mr. W. H. Higginbottom. Bruce Grove: 1, Mr. F. W. C. Gregory; 2, Messrs. J. Howitt and Son. Nottingham Road: 1 and 2. Messrs. Sutton and Sons. Messrs. L. Bright and Thoras estimate the cost for the Bulwell library at £3,430, Mr. Gregory's estimate amounts to £3,425, and Messrs. Sutton's (first premiated) to £3,400. In each case the buildings are of one story, and the plans provide for general reading-room, a juvenile reading-room, a lending library, and certain administrative apartments. The designs submitted all round represent a very high standard of architec tural skill, but no attempt has been made. since it was not desired, to provide anything else than substantial and efficient buildings. Wealth of architectural ornamentation which would necessarily have involved a considerable additional expense was not sought, and the competitors kept themselves well within the bounds of the specified instructions.

PERTH, W.A.—In connection with the erection of the permanent buildings of the University of Western Australia two prizes of a hundred guineas and twenty-five guineas respectively were offered for the two best designs for the laying out of the University's grounds at Crawley Park, Perth, W.A. A large number of designs were sent in, and the following awards have now been made by the Board of Adjudication :- First prize, 11. Desbrowe-Annear, Melbourne, Victoria; second prize, H. W. Hargreave, Perth, W.A. The design submitted by Messrs, J. Cheal and Sons, Limited, Crawley, Sussex, has. in addition, been granted an honourable mention.

Brunner, Manhattan; D. Everett Waid, Manhattan; William B. Bannister, Brooklyn; A. L. Brockway, Syracuse; and E. B. Green, Buffalo, Under the law the fee for registration is \$25, to be paid to the State Board of Regents. tion is \$25 of Regents.

## Building Intelligence.

MANDABAWN The building of the new Catholic Church at Mandabawn, near Coore hill, Co. Cavan, has now been completed. The hill, Co. Cavan, has now been completed. The building, which stands on the site of the old chapel, is, says the *Irish Builder*, Early Cothic in style, and is designed with nave, aisles, and square apse, from plans prepared by Mr. J. J. McDonnell, J.P., architect, M.R.I.A., 27. Chichester Street, Belfast, The lighting of the nave is from each end by tall lancet win days, argument in teacher, and he two light the nave is from each end by tall lancet windows, arranged in triplets, and by two light windows in each bay of the aisles the windows being filled with leaded glass. The nave and aisles are divided into live bays on each side by tall columns having moulded to the columns have the bases and caps. The ceilings are treated in fibrous plaster with moulded pitch-pine ribs and cornices, the roof principals and other joinery work of the church being of similar material. The cost of the new church has heen over £3,000. 

#### CHIPS.

The new central conneil school at Haslingden, built at a cost of £19,800, has been formally opened.

The Deubighshire County Council have appointed Mr. J. S. Wilhams, of Deubigh, as assistant to the county surveyor for main roads for the western division of the county.

The mediaval bridge of four spans in stone, the medieval marge of rour spans in stone, which spans the river Dove on the Uttoveter and Derby road about one mile from Uttoveter, has just been widened. The cost has been over £5,300 and the contractor was Mr. Thomas Godwin, of Hanley.

Captain John Miller, 6th Royal Welsh Fusiliers, who was killed in action on August 16 at the Dardanelles, was on the permanent engineering staff of Messrs. Guinness and Co. on processing statt of Mosses, Gumness and Co., of Dublin, and was a prominent member of the Engineering and Scientific Association of Ireland, of which he was prosident at the time war was declared.

time war was declared.

Messrs, J. and M. Clarke, of Clambrassil Street, Duldin, are at present creeting an addition to the mans' chorr at Sr. Clare's Convent, Harrold's Cross, from the designs of Mr. P. J. Munden, architect, Trinity Street, Dublin, The leaded lights and carred stone work are being executed by Messrs, Earley and Co., Camden Art Works, Dublin.

The band of workers engaged in excavations at Pomperi have made some interesting discoveries. The freecoes decorating the trichinium of a recently dug-out villa in what is known as the "Avenue of Tambs" have turned out to be remarkably fine and in won-larged terms are the properties. derful preservation. The freecoes comprise two separate pictures on themes familiar to those acquainted with household decorations at the famous R usin resort and the colonring of the newly-found frescoes is of unusual brightness

The Stainland Urban District Council are The Stainland Urban District Council are being urged by the West Ridling County Council to proceed with the preparation of a housing scheme under the Housing of the Working Classes Act. The County Council point out that in the urban district there is a great shortage of five-to-oned houses, and on the Registrar-General's standard of over-crowding there were sixty-two cases at the Bast census affecting a population of 457. The Stainland Council has replied that the matter will be taken into consideration at a favour-able communication. able opportunity.

At the last meeting of the Sheerness Urban At the last neeting of the Sheerness Urban District Council on Tuesday, a letter was received from the Local Government Board stating that their application for a loan of £5,000 was a generally satisfactory proposal in ordinary circumstances, but the council's proposed enlargement of the refuse destructor not being regarded as of pressing necessity proposed enlargement of the reason destruction not being regarded as of pressing necessity, they could not see their way to sanction the loan at present. This decision was regarded by the scancil as unfortunate, as the destructor. by the council as unfortunate, as the destructor enlargement is part of the water scheme, the existing boiler being required for the air-compressing plant to be set up at the supplementary bereinde at Sheerness East, which is to be the third source of supply, and has already been proved equal to an estimated capacity of 12,000 gallons per hour. It was resolved to lay more facts before the Local Government Board with a view to securing the local garden for the local core forthwith

The Tuberculosis Committee of the Coun ancil of Tyrone have accepted the tender Mr. Isaac Copeland, Belfast, at £2,750, for the erection of a pavilion, and another tender, as £2,015, for alterations to Dungannon House.

Mr. John Sweeney, formerly district engineer for the Department of Public Works, Ottawa, at Winnipeg, has succeeded Mr. C. H. Mathewson as resident engineer for the Department on the Toronto harbour improvement board.

Mr. A. G. Diury, an inspector of the Local Government Board, recently held an inquiry into an application of the Huddersfield Corporation to borrow £26,000 for the construction of relief sewers to the river Colne from to the river Colne from the Fartown and Birkby districts.

The rural district council of Eastbo have appointed Mr. William Walker, at Eastbourne have appended Mr. William Walker, at present surveyor and inspector of musances to the Connock Rural District Council, as district surveyor, at a salary of £200 a year, to include travelling expenses. Mr. Walker has held his present appointment for seven years, prior to which he servel under the Mayfield Rural District Council for two years.

The Board of Control of the State of Florida, at Hotel Mason, Jacksonville, have received tenders for the construction of the Negro Building and Hospital Building for the State School for the Deaf and Blind at St. Augustane. The plans were prepared by Messrs, Edwards and Sayward, architects, 635, Challes Building Masses. andler Building, Atlanta.

The Imperial Trade Correspondent at Toronto (Mr. F. W. Field) reports that a large company operating a departmental store in that city has decided to build a warehouse at Regina, Saskatchewan, at an estimated cost of 150,000 dols. (about £30,800). A company operating large departmental stores at Toronto and Wigninger has also decided to greet, a facand Winnipeg has also decided to erect a factory at Hamilton, Ontario.

The corporation of Belfast proposes to build 232 workmen's houses, and of these 168 have built, leaving a balance of 84 yet to be erected. The accommodation provided by the eracted. The accommodation provided by the tew houses consists of a large kitchen, scullery, two upstairs rooms, and a vard. The floors of the kitchen and scullery are filed, the yards are ball of concrete, and the fronts of the houses are of perforated brick. The new streets are wide and paved with pebbles, and the back insenses are all 40 ft, wide, and will be either concreted or tar-maoadamed.

A suggestive tensor

A suggestive paper contributed to the recent A suggestive paper contributed to the recent annual meeting of the American Concrete Institute by Mr. N. C. Johnson dealt with microphotography as applied to the examination of concrete, with the object of obtaining better knowledge of the structure of the material itself. A fact particularly mentioned by the nutbor was that all specimens of concrete examination by the number of the material specimens of concrete examinations. unined by him possessed a surprisingly large quantity of unhydrated cement, a feature he attributes to the difficulty in diffusing the attributes to the difficulty in diffusing the attributes to the uning the process of mixing. The voids revealed by the microscope also our hastes the importance of scientific grading.

ome hasts the importance of scientific grading. The work of electrifying the Lancashire and Yorkshire Railway Company's line between Victoria Station. Manchester, and Bury is steadily proceeding. With the exception of the section from Queen's Road to Victoria Station the "third rail" has been laid along the entire length. Much of the rolling stock is also ready at the Newton Heath works. October or November is unofficially mentioned as about the date of opening. The power-station at Ciffion Junction will not be ready until the end of the year, but arrangements have been made for obtaining a supply of electricity from the Manchester Corporation. The district covered by the proposed new electricity from the Manchester Corporation. The district covered by the proposed new electricity from the Manchester Corporation. The district covered by the proposed new electricity from the Manchester Corporation. The district covered by the proposed new electricity from the Manchester Corporation. The district covered by the proposed new electricity from the Manchester Corporation. The district covered by the proposed new electricity from the Manchester Corporation. The district covered by the proposed new electricity from the Manchester Corporation. The conway and Conway Bay Joint Water Suply Board bave accepted the tender of Messrs. J. Bryom, Ltd., of Bury, Lanes, at £2,750, for a steel girder bridge over the River Conway at Maenan, and midway between the Lanwars and Tal-y-Cafn, to carry a new water-main, and the tender of Mr. B Lumb. At £2,893, for the supply of the 15-inch cast-non-pipes required for the crossing. The engineer is Mr. C. F. Farrington. M.I.C.E., of Trinity Square, Llandudno, who succeeded to the appointment a few months since on the death of his father, Mr. T. B. Farrington.

The Leek Board of Guardians are about to enlarge their isolation hospital at Tinster's Wood. Mr. J. Moss. of Milton, Staffs, is the builder.

At Cymla, near Neath, Glam, a joint isolation hospital will shortly be built from plans by Mr. J. C. Rees, M.S.A., Parade Chambers, Neath.

A Roman Catholic recreation hall is about the built at Passage West, County Cork, to be built at Passage West, County Cork, from plans by Mr. J. F. M'Mullen, M.R.I.A.I., of South Mall, Cork.

11.M. Commissioners of Public Works are about to enlarge the post office at Dundee, the existing premises being quite inadequate to modern requirements.

The corporation of Ipswich are applying to the Local Government Board for sanction to borrow £8,760 for providing sub-stations in connection with their electric supply undertaking.

The order constituting a Drainage Board for the Derwent Valley has been confirmed. An area of about 10,000 acres has been scheduled in the neighbourhood of Wressle and Bubwith.

Stirling Town Council has decided to defer till after the war the execution of the St. Mary's Wynd improvement scheme, estimated to cost £13,000, and involving the clearance of a slum area.

The Public Service Stores Tender Board of Wellington, New Zealand, have accepted the tender of Messrs. P. R. Bailie and Co., at £1,931 for the supply of 120 miles run of twintwisted rubber-insulated wire.

Alterations and additions are about to be made to the old Tabernacle Chapel in Elder Street, Bridgend. Mr. P. J. Thomas is the architect, and Mr. R. Jones, jun., of Coychurch, has taken the contract at £1,030.

Mr. J. T. Dewhurst has resigned his appointment as sanitary inspector and assistant surveyor to the Ruislip-Northward Urban District Council, and the council have appointed Mr. W. L. Carr. engineer and surveyor to the council, as chief inspector of nuisances. For the present no assistant inspector of nuisances will be elected.

The Glasgow Corporation are about to widen two overhead bridges carrying Pinkston Road over the Caledonian and North British Railways and two other overhead bridges carrying Balmore Road over the same railways in connection with the augmented water supply now being provided. The plans have been pre-pared by Mr. J. R. Sutherland, of John Street, Glasgow, water engineer to the corporation.

A site has been selected for the Ontario Government Hospital at Orpington, Kent. The hospital will contain 1.040 beds, and will primarily be used for acute cases among the wounded men of the Canadian contingent. The cost of construction and equipment will be borne by the Ontario Government, subject, on completion, to a grant made by the War Office. A beginning has been made, and the work will be pushed on without delay.

At a meeting of the district committee of the Middle Ward of Lanarkshire on Friday, the Middle Ward of Lanarkshire on Friday, the desirability of making application to the Local Government Board of Scotland for authority to prepare a town-planning scheme in respect of land lying in the parishes of Cambuslang and Old Monkland was under consideration. The extent of the area included in the scheme is 5,616 acres. After considering the whole remarkability was unanimously resolved to make is 5,616 acres. After considering the whole proposal it was unanimously resolved to make the application to the Local Goverment Board.

HM. Commissioners of Public Works are reports that, according to the local Press, megotiations for the purchase of a site for new freezing works at Wanganui have recently been completed. Not less than £100,000 will

### FACTORY CONSTRUCTION: "NORTH-LIGHT" ROOFS

The north-light, or "saw-edge," roof truss is simple in design, and may be crected with a minimum of skilled labour. For spans of from 15 to 25 ft, it provides a suitable and satisfactory method of roofing one-story factories. The truss may have the ordinary bar tie-beam; a favourite recourse is an H section for tie, because such affords a convenient means of supporting brackets for shafting. Some designs include two trusses on one girdertype tie spanning from stanchion to stanchion. The slate covering, leadwork, and glazing are simplified in north-light roofs, Comparing it with an ordinary symmetri-cal roof with ridge skylight, in the latter the slating is split up into two areas, needing two verge tinishings and two flashed margins. In the saw-edge trass the slating is in one spread, the glazed surface having a similar unity. The gutters between the bays of these roofs require consideration. One method is to obtain "fall" by slightly and gradually increasing the height of stanchions.
Our detail sketch shows the general

type of north-light truss adopted where support for shafting is required. It canbe styled a neat or indeed a scientific not be styled a neat or indeed a scienting roof truss, but it serves its purpose practically. The tie member is, of course, vastly stronger than messary. It is a rolled joist, preferably with broad flanges, because in this type a more generous margin is presented for drilling and bolting. In all classes of steel framing this advantage attends broad flanges. In practical north-light roofs we put up with the superfluous metal so far as the trussing is concerned, because it admirably meets convenience in another way. There is, further, an advantage in the girder-type tie-we may, if desirable, set in the feet of principals, and so gain more space for the intermediate gutters, without petrating any great constructional effence.

In our sketch, therefore, we have shown a truss with H tis-beam instifying its extra cost and superfluous (in a sense) metal on the grounds above advanced. The tie is a light section of R.S.J., pre-ferably with wide flanges. It is not pretty, but there is little to please the eye

and the other providing a necessary tre throughout the building. The excivatory bolts and nuts, and a street of type could be greatly station of trenches and pits to the stanchion foundations. If we are not contemplifying such additions as travelling cranes, the requisite steel supports will, merely to meet theory, be very light, but for practical reasons, to obtain good and strong connections, and generally to provide a stiff and rigid structure, suitable for machinery in motion, we do well to allow an ample margin of strength. We have shown our stanchions 15 ft. high from floor to underside of tie-beam. The load on each such prop is the bay area by the weight per foot super together with the truss itself and one length of cross-tre joist. For lightness in roofing, galvanised iron, or one of the special inventions in fine-resisting ashesios tiles, will be found best. Assuming, in this case, some form of the latter as very suitable, and obviating the objection to galvanised iron- its short life -we may put down the loal of toof, including an allowance for wind pressure, as, say, 40 lb, per foot super. The bays are 10 ft, wide, and the span 20 ft., hence the load upon the truss is 20 + 10 > 40 lb. 3,000 lb. Our scheme is for light or relatively light machinery and machine work, such as a munitions factory engaged in the lighter class of work, and to be economically and quickly constructed. After reviewing these conditions we will arrange for ties, cross-ties, and stanchious of similar siction, say, 6 in. × 5 in. > 26 lb. In this case, each roof truss may be estimate I to weight say, 672 lb., and the cross-tie joist 250 lb. The load upon the prop is therefore 8.000 + 672 + 260 lb sav. 4 tons, so that we have some double the margin of strength in the stanchions, but we must allow for the use of these supports for miscellaneous purposes in an engineering works and also the making of good ti-and connections in the steel framing while the 5-in, flange gives a fair surface for throughway heles for 5 in, bolts. In truth the provisions are extremely light and could not well be cut down. We frably with wide flanges. It is not pretty, but there is little to please the eye in the lop-sided saw-edge roof; so we throw aside all but commercial considerations. We pay a little more for steel, but get certain practical works benefits. Omitting the H beam, and putting an ordinary bar, we might in the end bave to pay a good deal more for special gantry framings for shafting.

A one-story factory, to be constructed at low cost and expeditionsly, includes a series of columns or stanchions (as far more suitable) upon suitable foundations, with R.S.J.'s running overhead at right angles, one way forming roof tie-beams,

holts and muts, and a structure type could be greatly stitute in diagonal struts, were not such a 2h tem convenient where a close agrae of the ex-and belting is required. It has a convenient need to be seen that the "tre" at it the

stanchion heads is good.

The cutting of steel jesses, etc. is now by means of improved power his house of means of improve the winder associated descending accurately and experience of the character shown for the light duty assumed, do not really need head-plates, all practical purposes being met by angle plane countries sawn pieces of suitable stool and libed to stanchions and libed to girders. For a maximum of 3 tons load a plands steel joist out the squite a top and bottom can be connected to training and cross these by simple angle personal heavily loaded stanchious the head plate.

heavily lended structures in Thead plate is indispensable. It will be noticed in our sketch that the feet of the principals are seen of to the tre-beam by cut angle peeks. The tre-beams must, therefore, here in less accurately spaced and dirilled, which is possible thus to complete the provide staging before the lighter pears of the roof trusses are erected, leaving the influence at a certain stage, an array of the ps. beams, and cross beams, to which are envenience, the part trusses can be for This lightens the labour of historic. This lightens the labour of has in z.

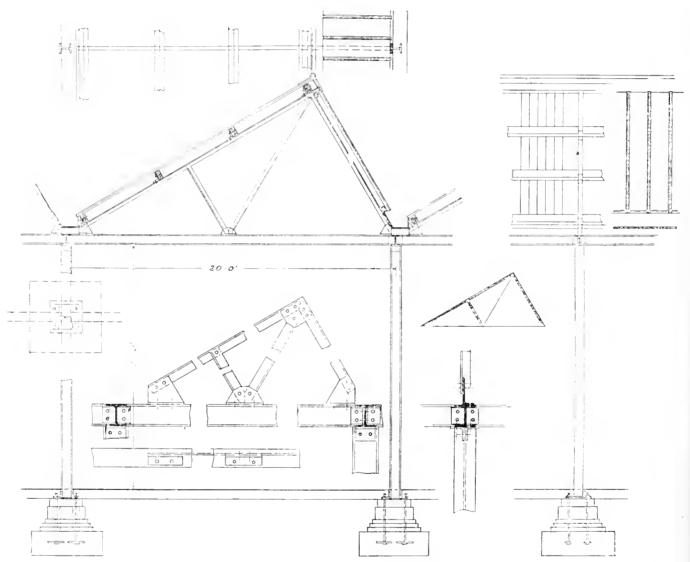

In argent work this type for filmis itself to expeditions building 8 much repetition occurs that machining which, repetition (ceris that incenting which, after all, is merely sawing, dr., ing and riveting is expedited, and may be reco-formed to set guide or "tyig," service was to stanchious and roof nembers. Given to stanchions and roof nombers. Given some form of power, modern curek using saws, drilling machines, and rouses into outfit, one skilled engine of call supervise ordinary labour, and if tooks sary, completes the whole work with a need to writ the sonyen need to writ the sonyen need for its supervise is need to writ the sonyen need for its second size of the writers of the same as long to write the issue of great more into a lost of great more into a lost of great more into a lost of great sent times. SPHIT TIMES.

the designer, but the angle gives 25-in. width for the belt holes. At the head of the principals there is a plain cut \(\frac{3}{8}\)-in. platé 3 m. iz At the back of the principals place. At the back of the principals are 5 m, by 3 in cleats, pieces sawn off steels angle, drilled and riveted to principals and boffed to the timber purlins, which are shown 6 in, by 4 in, to carry 1 in, boarding and light asbestos shows. If the sheets are to a steek length, the purlins must be spaced to suit the size of sheets. We leave the covering of the long slope of roof to the choice of the reader. If galvanised iron, light Z steel purlins will suffice. The matter of completing the roof now concerns the

free ends of the tie-beams and ties, and to carry purlin-ends, etc. To provide a galvanised from walling, horizontal steel members must be framed between the ex- hand-pulley block; but for heavy work, terior stanchions, and spaced according to which is not here contemplated, but such the size of sheet adopted. In this case as is required in, say, a foundry, quite the brickwork of the structure will be special care is needed, because the carrier confined to stanchion foundations and a and its burden brings concentrated load suitable plinth to the iron walls. Some-, upon the centre of the girders bracketed thing very light will be all that is here from stanchion to stanchion, while the necessary, the real foundation being stanchions themselves are eccentrically under the exterior stanchions, which take stressed. all the load. It should be noted that a structure composed of a number of bays, gineering shops it is hard to beat solid ridge, the gutter, and the glazing of the on the system shown in the sketch has wood-block flooring, both on account of its steep side. We show a section suited to not the natural "tie" of a two-storied good footbold and because there is less

roofs and stone templates to catch up the which is formed the "road" for the traveller. It is no great matter if the crane means nothing more than a couple of steel joists carrying a kind of enlarged

The bases of in the attachment of the legs. The the stanchions are below floor level, leavstrength in the design shown resides in ing the least obstruction to space. Where the bolting at the stanchion heads, the kind and location of machine-tool is Strong brick exterior walls add to definitely known, suitable concrete foun-stability. Where such do not exist, the dation should be put down, with anchorexterior stanchions might well be strutted bolts to secure the machines. the horizontal steel sections.\*

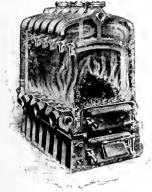

connected by several riveted plates to the

Since this was written, and the sketch completed, we have solded the anchor-bolts, etc., to stanchion four dations as shown have tild the table legs to the floor. Genuine base plates are arranged, riveted by angles out gussetwise. 44-in, flues could be left in the bick pers, and ground before bedding stone template, a curately holed for (in, bolts.

A great variety of industries, works, The proposals do not contemplate etc., have adopted this north-light roof, travelling cranes. Such would be best It may be modified and produced with served by auxiliary, shorter stanchings variety of detail. We have chosen the form seeming the most suitable for en reaf supports, and carrying joists on gineering and manufacturing premises generally. At the present time many industrial concerns have had to increase their premises, or hold in view possible increase of works area. Our plans show the simplest and most economical scheme for urgency in providing new works for light duty, and one that can be carried out with ordinary steelwork, such as at the present time is likely to be procurable by the builder, where elaborate constructions may entail some delay and difficulty in delivery.

#### MODERN WARMING SYSTEMS.

The present dearness of fuel will probably many lovers of the extravagant and wasteful open hie to realise that the time has come to supersede it by less costly and more efficient means of heating. Gas and elecmore efficient means of nearing, was and electricity offer no real advantages. The latter may, some day, and then no one will dream of dedicating an altar in every living room to the demons of dust and smoke; but, as yet, the cost of electricity is prohibitive. Gas is little cheaper, and will probably advance still further in price: and with it there is always the increased danger of fire, and of explosion -for which all insurance offices do not compensate when it occurs in adjoining premises. Gas, moreover, is destructive to books, pictures, and metal work. Its ease of installation is its recommendation to most people, but the apparent low cost thereof is very soon far more than compensated for in the ordinary private house by the adoption of hot-water heating. It is an established fact that with a properly designed and installed lowpressure hot-water warming apparatus eight average sized rooms can be warmed healthily and adequately throughout the day at the same cost as that of two open fires. Of the boon to the housekeeper following the cessa-

Broken View of Sectional Boiler.

tion of the ceaseless work of keeping the stoves going, and cleaning the rooms—of the saving in the laundry bills, and the end of damage to fabrics and furniture none have an adequate conception who have not been emancipated from the thraldom of the fireplace.

It is necessary, of course, that intelli-gent knowledge should govern the selection of a suitable heating apparatus, as systems which offer advantages under certain condi-tions may fail to do so under others. Moreover, the architect—while insisting on economy and efficiency—will rank appearance, especially in the home, as of equal importance. He will find guarantees for all three if he adopts the suggestions embodied

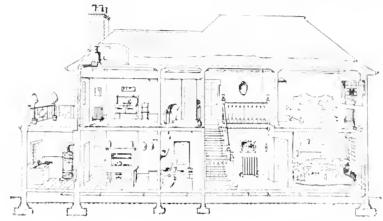

three if he adopts the suggestions embodied in an informative brochure issued by Messrs. F. A. Norris and Co., of 11 and 12. St. Andrew's Hill, Queen Victoria Street, which they will send free on application.

As they point out, the difficulty of combining economy, efficiency, and appearance has been successfully overcome by the low pressure hot water and steam systems of heating. The former is most generally in vogue in this country on account of the comparain this country on account of the comparatively small variation in temperature of the atmosphere, and is especially suitable for warming private residences, hotels, public buildings, churches, schools, etc. Steam heat ing can often be employed with advantage factories, workshops, etc., where a supply of exhaust steam may be available, and in large buildings where long runs of piping are necessary; also in places where the apparatus is used intermittently, as it is possible with a steam system to raise the temperature in a building very quickly when required.

for more hygicial surroundings call for something better than a half-warmed and "stuffy" room in which to spend the dull writer evenings. The result of this move ment is shown by the rapidly increasing furnament is shown by the rapidly increasing furnaces, for a considerable of houses and mainstons installed "lived tile distribution of heat can be obtained."

At Oxford the Bode in Labour should be more even distribution of heat can be obtained.

to the open grate fire, in order that a more even distribution of heat can be obtained. With a modern heating boiler practically world, is warmed by me in of a Nerro of the field is utilised, only sufficient being remembers that nothers in the rature of a

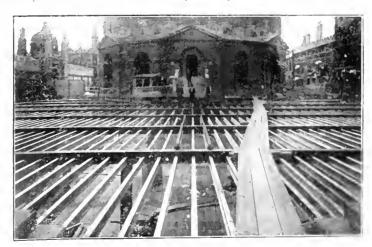

A Low Pressure Warming System in a House without Basement,

allowed to escape up the chimney to create light is allowed in this building, it may be the necessary draught. The question of appearance has also been carefully studied, and ments regarding the safety of this warming radiators can now be obtained in many grace ful designs, both in the plain and ornamen-'al finish, while with suitable enamels or bronzes they can be made to harmonise completely with their surroundings, and in this respect alone are really an acquisition in any home. The necessary pipes for the conveyance of the hot water to and from the radiators can also be laid out of sight or rendered quite inonspicuous; moreover, the scientific development of central heating has made possible the use of smaller sizes of pipes.

For stores, shops, and all buildings of any pretensions to size a central heating apparatus is the only reliable and efficient method ments regarding the safety of this warming system. The new underground book stores consist of two floors under the roadway and lawn in from of Radeliffe Camera, and are capable of storing about two million books. Ventilation is provided by means of large inlet and extractor fans driven by an electric motor; the air first passing through a screen to purify it and then being conveyed through ducts to the necessary points. In cold weather the air is passed through a heater, thus the stores are ventilated and warmed at the same time.

Low-pressure hot water is universally recognised by the fire insurance companies as a safe and effective method of heating, and generally more favourable terms of insurance

Beneath the steel joists which support the roadway and lawn are the underground Book Stores of the Bodleian Library, heated and ventilated by a "Norris" System. Radeliffe Camera, in the background, also has a "Norris" Warming System.

to employ to keep the building uniformly warm and comfortable. The results obtained warm and commonance. The results obtained are decreased fuel and labour expense, cleaner stocks and interior furnishings, and absence of fire risk. To these advantages must, of course be added the maintenance of an inviting and confortable atmosphere which lends so much to the attractiveness of business premises, and helps in no small measure towards their success.

are obtainable where the notice.

Ventilation can be secured by (it it) ordinary direct ordinars with buffle parts when the air is admitted to the projection through the wall at the back or through the floor immediately beneath the radiator. illustrated.

Another method is known as the "indurect" system, for which a special type of radiator is manufactured, this usually being enclosed and suspended from the base-The large and increasing number of business and public buildings which are being enclosed and suspended from the basement ceiling, a cold air duct leading from the

## THE WORK OF THE TRADES TRAINING SCHOOLS.

report and awards of the judges on with report and awards of the judges on the With done at the Trades Training Sides of the Worshipful Companies of Carpenters, Jonners, Painter Stainers, Plastreis, Tyleis and Bricklayers, and Wheel wrights, at 155, Great Titchfield Street, Port With the provest the first street, and the provest of the management of the schools, of which Mr. H. Phillips Fletcher, F.R.I.B.A., F.S.L., is the director, is to improve the technique of each craft by in structing men who actually earn their living by their lab airs therein. In most of the classes it is reported that the number of their lal surs therein. students is smader than in provious years and the amount of work to be adjudicated up n is consequently less, owing to the war. In the Carpenters Class the work executed is regarded by the judges of very good character, and the following awards were made:—Certificate and £2 in books or tools, Thomas James Woodard: certificate and 30s, in books or tools, J. Harold West: eerificate and 15s, in books or tools. Cecil Davies. In the Jamery Class many of the exhibits were left m an unburshed state owing to students being detuned on overtime work.

The Alexander Howard Medal and £2 in looks or tools (these prizes are in every case 2) yen in books or tools of the value stated) has this year been awarded to G. Austin for has this year neen awarden communication in excellently executed honours board in English oak. Certificate and 15s., W. S. Halass cortificate and 10s., J. Dipple. The Hales: certificate and 10s., M. S. Hales: certificate and 10s., J. Dipple. The inaudruling awards were:—Silver medal and £2. H. G. Howe: certificate and £1. E. C. Owen; certificate and £5s., W. Chance. In Masons' work the judges were of opinion that in future the exhibits should be executed on a larger scale and the joints above. shown. The awards were: — Banister Fletcher Medal and £2 in books or tools, Herbert George Bush; certificate and 50s. Henry Joseph Maibach; certificate and 21. Richard Sherman: certificate and 15s., Frederick Jimes Moore, In the Painters' Class there was a marked improvement in the quality of the work. Violent colouring was avoided and more care taken in the preparatory processes: the examples of graining were quiet in colour, and showed care and skill in the execution: while the specimens of signwriting exhibited a distinct improvement on that of previous exhibits. The awards were:—Silver medal exhibits. The awards were:—Silver n and £1. Edward Leander: bronze medal William Bedford; certificate and 15s. E. Fowler; certificate and 10s., L. Harlow; certificate and 10s., W. Giddins. In the Plasterers Class the judges experienced some difficulty in separating the prize-winners, so uniform was the work:—Silver medal and 15s., Thomas McDonnell; bronze medal and 15s., Alfred Austin: certificate and 15s., John James Donovan; certificate and 15s., John Love: certificate and 10s., Stanley Thresher: certificate and 10s., Walter Pettit. The Plumbers' Class maintained the excellent record of past years, the prize-winners being as follow:—Silver medal and £1. Albert Henry Briffett: Silver medal and 10s. Alfred Griffey: silver med d and 10s., William Per s 2s: bronze medal and 15s., Charles Lam s is a bronze medal and 15s., Charles Lambane: certificate and 15s., Charles Porter: certificate and 15s. Henry James Briffet: cert heate and 15s. Percy Harris. The Smiths' Class also maintains the previous high standard. Special prize of £2. Herry Collects: special silver medal and £1 (former cer point of silver medal). Harold Prund: brazze medal and £1 (presented by the Blacksmiths' Company, S. Jones; certificate vid 15s., S. Blake, Considerable promise via d'splayed in the Stone Carvers' Class, the reach's being. Bronze medal and £1.

Bricklayers Class, a high standard of excellence was maintained, no works falling below the average submitted in recent years. The silver medal and £1 went to Albert The silver medal and £1 went to Albert Henry Smith, and the silver medal and 15s to George Henry Wilmot; special prize of £2 (former recipient of silver medal), Goo John Rynolds; certificate and £1, Alfred Hurst; certificate and £1, James Walsh; certificate and £1. Joseph Henry Grove; certificate and 10s., Frances Geo. Bond; certificate and 10s. George Wiles; certificate and 10s., Harry Wiles.

The exceptional demands made by the war has affected the Wheelwrights' Class more than any other in the school, and the work has been produced entirely by apprentices of between niterin and numeteen years of age. Notwithstanding this, the quality of the work is well maintained. The certificate and 50s, went to W. H. Dawar, a certificate and £1 to F. Mitchell, the master's prize of £1 to G. Packham, and a certificate and 10s. to M. Ellis. The exhibits in the Wood-carvers Class were mostly of an elementary character, and the awards were as follows: Certificate and £2. James Shirley; certificate and £1 (given by Jomes' Company), Fredeand rick Devisse; certificate and £1, Harold ('row; certificate and £1, Thomas Waltham; certificate and £1, Hugh Chittham; certifi cate and £1. Ernest Brock; certificate and (given by Joiners' Company), Sidney

The work done in the Wiremen's Class is of a practical nature, and does the exhibitors great credit. The awards are: Senior Diviguad credit. The awards are: Senior Division—Certificate and £1, A. E. Darlow; special prize of £1 former recipient of first prize). A Jordan; certificate and 7s. 6d., A. V. Morgan; certificate and 5s., G. Hastings; certificate and 5s., H. Rickards, Junior Division—Certificate and 15s., P. Doody; certificate and 10s., F. Goodge.

The new session of the whole of the classes commences on one of the days in the week after next, opening Monday, the 20th inst. They are held in the evenings, beginning at 7 or 7.50, and the fees are very moderate, being uniformly 3s per term for apprentices and 5s. (or in the solitary case of wood carvers, 6s) for a lults.

## ANCIENT MONUMENTS IN WALES.

The sixth report of the Royal Commission on Ancient Monuments in Wales and Monmouthshire mainly deals in continuance with the inspection of the monuments of Merionethshire and Pembrokeshire. It is remarked that much of the latter county lies within the military protected area, and "the necessity of the latter county lies within the military protected area, and "the necessity of the neces sary restrictions upon the movements and occupations of civilians have slightly retarded the progress of the work of the Commission.

During the year the Commission issued

volume on the ancient monuments of bighshire, practically completed that dealing with those of Carmarthenshire, and completed the inspection of the menuments of Meriou ethshire. They also finished the task of examining the inthe schedules and maps of

examining the title schedules and maps of the entire Princ pality.

The Commissioners declare that there can be no two optaions regarding the importance of farm and field names to the Welsh archaeologist. The fact that the Welsh place-names are being traidly replaced by English names, so that the local lore which is often enshrined in the former is in danger of being last are in itself a sufficient reason for the lost, was in itself a sufficient reison for the

THE A.A. SCHOOL OF ARCHITECTURE.

The curriculum of the forthcoming session The curriculum of the forthcoming session of the Architectural Association School of Architectura, which opens on Monday, the 27th inst. has just been published. The classes are held at the Association's premises. 18. Tufton Street, Westminster, the headmaster being Mr. Robert Atkinson, A.R.I.B.A. The lecturer on Theoretical and Practical Construction is Mr C. E. Varindell, A.R.I.B.A., and the Day School masters are: First year, Mr. Alan Potter, assisted by Mr. W. M. Keesey, A.R.C.A.; second year, Mr. R. Lowry; and third year, Mr. L. H. Buck nell, A.R.I.B.A. The master of the School of Design is Mr. H. M. Robertson, and the lecturers are: Greek and Roman Architecture, Mr. Theodore Fyfe, F.R.I.B.A.; Me haval Architecture, Mr. Aymer Vallance, M.A.; Renaissance Architecture, Mr. A. E. Richardson, F.R.I.B.A.; Professional Practice, Mr. A. O. Colland, F.R.I.B.A.; and Water-Coloar Class, Mr. H. F. Waring, At the Evening School Mr. Robert Atkinson is the headmaster, assisted by Messrs, C. E. Varindell and E. M. Robertson; and the Day School masters (Messrs Potter, Lowry, Kresey, and Bucknell) each attend one evening per week and take a special subject.

The Evening School has been entirely rethe Architectural Association School of and take a special subject.

The Evening School has been entirely to The Evening School has been entirely rearranged, and now consists of an advanced School of Design and a preparatory course for junior students. The School of Design well be worked on similar lines to the third year of the Day School, but will be of a more advanced character. All work will be on a strictly competitive basis, and will carry on as far as possible the tradition already established in the Day School. A special studio has been opened for the School of Design, which will be onen every day until 11 mail. Monthly subjects will be set and will be criticised by the headmaster, who will also attend one evening per week. In addition, twelve hour sketches will be given at fortnightly intervals. In the Day School the fees re: First year, 15 guineas per term, and 10s. 6d. per term subscription to the Athletic Club; second and third years, 16 guineas per term, and 10s. 6d. per term subscription to the Athletic Club—In each case the fees are inclusive of all demonstrations and lectures.

Evening School.—Preparatory courses, including lectures, 4 guineas per term; third and fourth years, including lectures, 5 guineas

per term.

The fee for course of instruction in the Evening School for the preparation of R.I.B.A. Testimonies of Study (exclusive of lectures), 2 guineas per term, or 5 guineas er session.

In the School of Design the annual sale ription is £1 1s.; per monthly

## ---EFFECTS OF COLLMN REINFORCE MENT.

Results of tests of twenty-four large concrete columns with varying percentages of spiral and longitudinal reinforcement, have be a reported by a committee of the American Concrete Institute. Then effect is to con-firm the values used in current practice. Strength increases consistently with larger stiel percentages. Strain measurements, both longitudinal and lateral, show local differences in strains at different positions along the length of the column, and indicate that the ratio between lateral and longitudinal unit strains (Poisson's ratio is apparently 4 or 1-5 for low stress intensities.

for now stress intensities.

The formal statement of conclusions war ranted by the tests, according to the commit

1. Current practice scens confirmed as to the effect of varying percentages of longitudinal reinfercement within the range of the tests as expressed in the formula:

2. Columns with spiril reinfere ment appear

2. Columns with spiral reinfere ment appear to be stronger and to igher than a lumins with mossimal reinforcement.

3. Spiral reinforcement seems to be approximately four times as the tive in giving ultimate strength to the column is the same volume of longitudial reinforcement.

4. The effect of the brightndual reinforcement decreases as the percentage of spiral reinforcement in reises.

#### THE VALUATION OF NONCON

FORMIST CHAPELS
Mr. C. Hewetson Nelson, of Liverpoor. has rendered a public service in obtaining a memor indum from the Board of Inland Revenue as to the position of Nonconformist chapels under the Finance Act, 1910. The inquiry arese out of a proposil to value the Wesleyan Church at Wallasey. Mr. Hewet son Nelson ascertained that there appeared to be no specific exemption of churches under ta: Fin nice Act, 1910, but that, on the contrary. Section 6/1 provided that where land was held by a permanent trust (such as is the case with most churches) it should be valued once every fifteen years, and the in-

Allied once every lifteen years, and the in-crement value duty collected thereon.

At Mr. Nelson's request, Mr. Arthur Hen-derson, M.P., the President of the Board of Education, kindly undertook to obtain the opinion of the Treasiny, and in the course of a fortuight forwarded the follow-ing memorandum prepared by the Board of

Inland Revenue:-

Mr. Nelson is under a misapprehension as to the purpose of the valuation. The scheme of valuation set up by Part I, of the Finance (1909 1910) Act, 1910, is a general one. It embraces all land in the United Kingdom, both that which in its present ownership ownership and condition falls within the scope of the land valuers duties and that which does not. Much land which is at present within the scope of exemptions may. on account of some future change of condi tion, become liable to increment value duty, and the original valuation would then, of course, become an essential factor in the calculation of duty. No increment value duty or other land value duty is, of course chargeable on a church held by or on behalf Wesleyan Connexion and occupied the and used for its purposes, though increment value duty might become payable in the event of a sale.

In reply to this memorandum Mr. Nelson drew Mr. Henderson's attention to the fact that the memorandum did not state:-

1. Whether churches held on permanent trusts came within Section 6 of the Act:

Whether churches came within the exemptions of Section 37 as "property appropriated for charitable purposes. To these inquiries Mr. Henderson has

To these inquiries Mr. Henderson has obtained the under-mentioned note from the

"Notwithstanding that a Wesleyan trust falls within the provisions of Section 6 of the Finance (1909-1910) Act, 1910, property held by such a trust would be exempt from increment value duty on the periodical occasions for collection of that duty, provided that the conditions for exemption under Section 37 of the Act be fulfilled. In any normal case church purposes would be charitable purposes within the meaning of that section.

At the last meeting of the city council of At the fast meeting of the tray council on Winchester approval was given to a scheme for the further widening of Bridge Street, from No. 20 to Cheesehill Street, in accordance with military requisitions. An application will be made to the Road Board and the county council for a great towards, the cost which is for a grant towards the cost, £11711s.

A rew reredes and panching have been dedicated at St. Thomas's Church, Penkhull, Staffs. The work was carried out by Messrs, Meikleredin and Sors, Stokeen Trent from designs by the two churchwardens, Mesers, A. R. P. Piercy and J. Arfon Jones, both of whom are architects. The carving has been executed and presented to the church by Mr. Meiklejohn, sem, new in his eight tool.

At the last meeting of the Shipstonson Stour Rura, District Council it was reported that the zernal work on the contract for Shipston sewerage amounted to a cest of £5,167 fs. 6d. and that the istimate was exceeded by about £79, and the Joint Commutee recommended the council to apply to the Local Government. Government l for sanction to a loan of £50 to meet The Joint Committee also recommended this. The Joint Committee also recommend the council to apply for sanction for a long of \$2.7 for carrying out the work on connect that to work we delay of \$2.7" for carrying out the work on connecteds with the rew sewers section to delay second be caused when the council were in a position to deal with that matter. The report was adopted

## Currente Calamo.

The "explanations" by the officials of the reasons for the dismissal by March next of 1,700 of the temporary men on the staff of the Land Valuation Department may satisfy the comparatively few people who believe that when this Government gives place to another the "refreshing fruit" of their labours are likely to be utilised by their successors any more profitably to the nation than heretofore; but it is rather hard on the men under present circumstances. Before the war there were 4,000 of them engaged, and we doubt very much whether, as it is stated. 97 per cent, of the valuations have been made We doubt still more whether much of the £123,000 we are told is to be saved by turning them adrift is ever likely to appear on the credit side in future Estimates. However, "economy" is the order of the day in all that concerns the professional workers. There is no need of their votes in Parliament, where the four-hundred-pounders must still be given full pay for half time, and little outside where war bonuses and increased wages are being so generously distributed at the cost of the taxpayer. For them the sole consolation is that discharges are as "automatic" as successive strikes of Welsh miners who have so mastered the secret of coercing the Government, and whose successive defiances of all attempts to keep them to their engagements will doubtless continue to extort concession after concession while their friends at court and their German sympathisers calmly contemplate our fast vanishing coal output!

The special Housing Conference held at Bristol last Saturday rightly emphasised the fact that the housing question is more urgent than ever, and that it must be recognised that it is a national and not a mere local matter. It is always difficult, and frequently impossible, to move local authorities in the matter. They are afraid of the rates rising for they say so, ignoring the fact that few other forms of outlay yield so good a return, and add lastingly to the solid capital of the town or district wise enough to perceive it. We have long recognised that an Imperial need demands Imperial help, and that this would encourage private enterprise and stimulate municipal activity more than anything else. Mr. Am mon, of the Fawcett Association, urged that Government should advance from the National Exchequer sums equal to 20 per cent, of the amounts sanctioned by the Local Government Board for housing schemes. It would be a good investment, but the State will never move till the workers recognise that only united pressure will compel it to do for Englishmen what they are being taxed for to do for Irishmen. Ireland, as he insisted, has not been side-tracked by all kinds of shibboleths as have English workers, and it only needs persistency to induce legislators, who will do nothing till they are obliged, to frame some such measure as the Irish Labourers Act.

The Connoisseur, in a second sound article on art and national economy, drives turther home some excellent reasons why if the sacrifice of art will weaken the country during its mighty struggle, then art should be fostered. and those who can still afford to support it should do so to the best of their ability. The question at issue is whether the expenditure on the productions and wares of artists, art craftsmen, designers, and dealers could be transferred to other objects during the present crisis with advantage to the nation. The re-

art-workers into retirement, and others not so advantageously situated into lay employments. The amateur economist will say, "So much the bett r: the younger men can join the Army or Navy, while the elders and those otherwise incapacitated from active service may become munitions makers." As it is, however, the first part of this programme has already been largely carried out. The younger men. have volunteered for the front as eagerly as those belonging to any section of the community. Many a career which might have been crowned by immortal fame has ended in a nameless grave amidst the lowlands facing the English Channel, or on the steep hill-slopes overlooking the Hellespont. Of the elder men. some have already been compelled for a time to sacrifice their artistic knowledge, gained during years of study, and turn to work which could be as efficiently performed by any hack office clerk. The majority still try to maintain their positions, hoping that with the support their wealthier patrons can still afford to give them they may hold out until the end of the war. What will happen if they fail in their endeavours? Dealers will suffer: close up these various galleries and shops, and the result will be ruin to most of their proprietors, a heavy loss to property owners, and a substantial decrease of Government revenue. Repeat the process throughout the country, and the loss to the community will be enormous. One of the most profitable methods of wealth creation is in the employment of the higher forms of art. Commodities almost valueless in themselves are converted by the hand of the artist into something rare and precious. A strip of canvas and a few ounces of pigment are transformed into a beautiful picture; a block of stone into a fine statue; some fragments of clay and silica into a delicate piece of porcelain; a few lumps of wood into a costly piece of furniture. These articles tend to become more valuable with time, and by accumulating them we are adding to the national savings as much as if we put by the purchase-money for them in the savings bank. Interrupt such service by setting their producers to the industrial labour more perfectly executed by people whose ability rises to no higher office, and the country is impoverished rather than strengthened. National economy is essential, but it must be a wise and discreet economy rather than a blind and partial parsimony. There are certain directions in which large savings may be advantageously made.

A case of some interest incidentally to some of our readers which was heard in the Chancery Division before Mr. Justice Sargant on June 16, 17, 18, and July 14 last, is fully reported in "The Illustrated Official Journal (Patents)" of the 1st instant. On September 7, 1906, Letters Patent (No. 19.949 and No. 19,949a, of 1906) were granted to William Hervey Brown for, respectively, "Improvements in bond ties for walls and the like" and "Improvements in bonds for securing facing constructions to concrete columns," On March 4, 1908, Letters Patent (No. 4.953, of 1908) were granted to the sume patentee for "Improvements in and re lating to bond ties for walls and the like." as a patent of addition to the patent No 19,949, of 1906. A petition for the re vocation of the patents No. 19,949 and No. 19,949a, of 1906, and another petition for the revocation of the patent No. 4,953, of 1906 were presented by the Expanded Metal Com pany, Limited. On the last mentioned peti tion an order was made by consent for the The first-men revocation of the patent. sult of such procedure would be to drive some | tioned petition (with a petition for the re

vocation of a patent No. 13,624, of 1908) came on for hearing on July 28, 1914, before Mr. Justice Warrington. On the third day of the hearing, it was stated to the Court that the parties had agreed to the dismissal of the petition on terms, and an order was made accordingly (31 R.P.C. 397). On January 7, 1915, a summons was taken out by Robert Newbald Kay, who asked that it might be declared :-(1) That the applicant, as the solicitor employed by the patentee in his opposition to the petition, was entitled to a charge upon the patents No. 19,949 and No. 19,949a, of 1906, and the whole of the interests therein of the several respondents to the application, including the interests of them, or any of them, in or und r an indenture, dated December 20, 1907, and made between the patentee of the one part and Richard Johnson, Clapham and Morris, Limited, of the other part (being a sole and exclusive licence under the two patents. amongst others), and any royalties or moneys receivable under or by virtue of the indenture, and upon any other property recovered by, or preserved for, the respondents to the application, or any of them, in the petition or the opposition to or defence thereof, for the taxed costs, charges, and expenses of the applicant of, or in reference to, the petition. as such solicitor as afor-said. (2) That it might be referred to the taxing master to tax the costs as between solicitor and client, including the costs, charges and expenses of the applicant of and in reference to the petition, and his costs of and incidental to the application. (3) That the amount of the taxed costs, charges and expenses (including the costs of the application) might be raised and paid to the applicant by a sale of the patents, including the interests of the respective respondents in or under the indenture of December 20, 1907, and the other property if any) so preserved, and that until paynent, and also in the meantime pending the nearing of the application, the whole of the premises should stand charged as aforesaid. After a lengthy review of the whole cirumstances, Mr. Justice Sargant said: "In he result, I dismiss the summons, and I am fraid that I must dismiss it with costs." Leave, if necessary, to appeal was given. nd a stay of execution was granted until August 1, and then, if notice of appeal was iven, until the hearing of the appeal.

Among the sculptured stones which are bout to find a permanent home in the new ruseum at Whithorn is the "Inscriptive tone Pillar," which had its more modern osition about a quarter of a mile from the urgh, on the road to the Isle of Whitorn. Its position there, however, accord ig to a correspondent of the "Scotsman," as wholly capricious, it having been brought om the Mains Farm, which is partly within ie precincts of the burgh, and where in all robability it served the purpose of a burgh bundary mark, as other stones can be aced in the environs-uninscribed, hower-performing a like function. It is of reat antiquity. The stone is of the hardest riety of the prevailing rock of the district. ight above ground, is 3 ft. 2 ins., and its rth 3 ft. 10 ins., the broad side being 1 ft. ins. and the narrow 9 ins. The hiero-vphic figure upon the stone consists of two meetric circles, of which the interior is inches and the exterior about 1 ft. 2 ins. i diameter. Within the inner circle is scribed a cross, formed of lines drawn id it is of parallelogram form. Its height

double. like a concex has as to exhibit direct four distinct double course tenses, of which mid. Control two, placed end to end make a diameter, out the four thus forming two diameters, passing at right angles to each other through the fortheon. centre of the circle. The e two concentric circles stand upon a sort 1 pedestal made their action but the pedestal made dressed to the new transfer to the circles drawn double, which are dis of two lines drawn double, which are distant from each other at the base, or widest part, 6 ins., and at the top, or narrowest part, where the concentric circles r st, about 1; ins. The height of this pedestal is 8 inches, which being added to the other or largest circle (1 ft. 2 ins), makes the whole height of the hieroglyphic figure 1 ft. 10 ms. Under the concentra circles, and partly across the pedestil, are the words Locati Petri Apostoli. The last two words present no difficulty, and the common people style the stone that of the Apostle Peter, but the first is not a little puzzling. From what has been brought to ight of late years. however, the original inscription upon the stone seems to have been thic est locus Petri Apostoli- "Here, or this is the place of Peter the Apostle." When it is understood that in such inscriptions locus is frequently translated as if it were sanctus, the meaning of the sent-nor appears obvious, the translation thus being. "Here, or this is the Church of the Apostle Peter." This stone, probably, originally marked one of the Chapels of Ease Cruggleton, Isle of Whithorn, Kukmaid in Kirkmadrine, etc .to the renowned monastery at Whithorn, erected in the reign of David I. There is a hole at the top of this stone 8 inches deep and two inches in diameter.

Mr. Walter H. Whitear, who last year showed by presamptive evidence in the Athenaum that Samuel Pepys was born at his futher's house in St. Binde's parish, and that the house abutted on the churchyard, but thought its exit stuation would probably never be determined, now writes to the same journal that he thinks that, with as much ear thinty as is possible after the lapse of time. the site was that now occupied in Salisbury Court by the White Swan public-house and the restaurant adjoining on its south side; and an interesting confirmation is that the measurement of the two frontages together is forty feet, and that the site of the back portion in the churchyard is that now occupied by Nos. 9 and 10, St. Bride's Avenue. Soon after the Great Fire, a body of Commissioners was appointed to supervise the rebuilding of the City, and of these, three were instructed to make a survey of the devastated ground and the properties involved. The original MS, surveys of Ohver and Mills, two of the Commissioners appointed, are happily still extant, and are in the Guildhall Library in five large volumes. Of the importance of these unique records it is impossible to speak too highly, and their value in research like this is priceless. From their giving the names if the owners of the adjoining properties one is enabled to proce t gether the plan, and reconstruct it as a whole. Some of our own readers who may have occasion for ordinary business reasors to seek similar information will do well to note the

## HYDRATED LIME IN CONCRETE.

Results to be secured by the use of hydrated i lime incorporated in the concrete mixture are set forth by Robert S. Edwards, consulting and chemical ergmeer, of Portland, Oregon, in a paper recently published in the Lo. Angeles Builder and Contractor.

Hydrated lime is now widely used in this country for mixing with concrete to mall, the concrete dense and moisture-proof. The additional concrete dense and moisture-proof. tion of small percentages to the mix is mining diately effective in promoting plasticity throughout the mass, thereby rendering the concrete more homogeneous and keeping a so during transit, before placing. After placing concrete which contains hydrated lime its subsequent spading in the forms is greatly tail tated, and the thorough covering of all steel reinforcing rods is more perfectly reinforcing rods is more perfectly account plished. In fact, concrete mixed with a small

pushed. In fact, concrete mixed with a small percentage of hydrated lime seems to fall ...most automatically into place.

The proportion of plasticity and home geneity which small percentages of hydrated generty which small percentages at all lime give to concrete cannot be secured in any other way at so little added expense for the material used. On many large reintorced conmaterial used for many large remnorced con-crete buildings which are being constructed in the United States to-day the concrete as mixed at one or two central mixing plants, which are generally located in the ground or in the basement of the building. After mixing it is dumped into carriages and elevated taen distributed through galvanised non paper or chutes to the various parts of the building. It is a well-known fact that Portland cement. when mixed with water, is not very plastic some brands of cement being extremely non plastic; and while the mixture for reinforced building construction is a rich one (generally 1:2:4), yet even so it is sometimes very difficult to secure sufficient plasticity in the concrete to insure its being elevated, poured, and distributed without considerable s and clogging of the pipes, attended with more or less separation of the aggregate.

The use of hydrated lime as a void filler in concrete mixtures, and for rendering concrete mixtures more water tight, dates back several years. Xumerous tests show that a replienment of from 10 to 15 per cent, of cement by hydrated lime in rich mixtures does not de crease the compressive strength of the con-crete after three to four months' time, and ultimately increases the strength and perform-ance of the concrete. It apparently makes but little difference as to its action as a void filler whether the hydrate is manufactured from a dolomitic or high magnesium time or a high-calcium lime, it being necessary only to have a product which contains no free lime or unslaked particles. The proper hydration or dry slaking of line reduces it to a finer degree of sub-division than can be accomplished by any mechanical means.

The amount of water required to convert the dry hydrated line into a plastic paste varies from 50 to 70 per cent, of the weight of the lime; while to obtain a mortar of similar consistency with Portland cement an addition of 25 to 39 per cent, of water is required.

Unlike Portland cement, however, the add tion of water to hydrated lime does not create any chemical reactions: simply a lime paste is formed, which holds its excess water for a long time. Unon the addition of small quan tities of hydrated lime, amounting to 10 or 15 per cent, to the weight of cement used in concrete mixtures the Lydrate, which has absorbed a large amount of water, corresponding to its weight, is thoroughly disseminated throughout the concrete mass; and, owing to its fine piastic cond tion, it is forced immediately into places in the concrete which the cement cannot reach.

Concrete so mixed, on leaving the mixer, flows more readily into place, and the coarse aggregation in the concrete mass. In other words, the extreme finely divided condition of the moistened hydrated lime paste has in creased to a marked degree the covering or

#### PROFESSIONAL AND TRADE SOCIETIES.

ARCILEOLOGICAL CAMBRIAN SOCIETY The Ven. Archdeacon Thomas presided at the annual meeting of the Camorian Archeological Society held at Shrewsbury on Tuesday in last week. There was a large and representative attendance. The report of the committee stated that it was mammously agreed, owing to the continu ance of the war, to postpone the society's A grant of £5 was recomannual excursion. mended for excavations at Llanthony Abbey and £20 for excavations at the Roman city of Priconium, near Shrewsbury A special grant of £25 had been made to the Prince of Wales's Fund. The committee had decided to publish the series of MS, notebooks of Fenton's "Tour in Wales," now in the possession of the Cardiff Library .- The Chairsession of the variant Library.—The Chairman moved the adoption of the report. Mr. T. E. Morris, London, in seconding the motion, said in regard to the votes for excavations, he would be very glad if in future the association could persuade the owners of the soil where excevations were made to hand over any finds to museums. He regretted to say that during the last twenty-five or thirty years most of the objects of interest so dis covered had gone, and no one knew where, It could be seen from the reports of the com missioners on ancient monuments in Wales that a good many objects of interest in the Principality had been lost, and he hoped in making their grants they would urge that the objects discovered be preserved in some institution.— Mr. Utyd Gardner, Alerga venuv, supported Mr. Morris's suggestion.— The Hon. Mrs. Bulkeley-Owen asked If the The Hon. mecting suggested that interesting finds should be placed in the Welsh Museum or the National Library of Wales. They did the National Library of Wales. They did not want such discoveries to go out of Wales. Mr Gardner said he did not want them to go out of Wales.—The report was adopted.

The Fallot papers containing the complete list of names will be issuel in advance of the special general meet u.g. on October 14 to members who are not under any hability to the Society.

The great square tower which ferms the central feature of the mich front of the Victoria Tower at Ottiwa has been learning for form Tower if Office 1748 need forming 1765 ward for some years, and now, on the advice of an engineer from New York, it is to be demolished and rebuilt on fresh foundations. The tower was built between 1975 and 1308 The tower was

LEGAL INTELLIGENCE.

DISPUTED USE OF A SEWERAGE OUTFALL.—The case of Wapentake of Use OUTFALL.—The case of Wapendake of Olive and Derwent Dramage Commissioners of Fletchers (Shippley), Limited, came before Mr. Justice Low in the Vacation Court on Wadnesday on a motion by the plaintiffs for an in-term injunction. Mr. T. Terrel, K.C., for the plaintiffs, said that the object of the in-junction was to restrain the defendants con-tinuing a certain outfall which they had recently constructed, whereby sewage and other foul matter flowed from the defendants' works into the Cherry Orchard drain of the plain-tiffs' system of drainage. Mr. Robertson, for the defendants, asked that the matter should allowed to stand over for a fortnight, to enable his clients to file eidence in reply the plaintiffs' affidavits. He explained that the defendants had to obtain an engineer's report, and that this must necessarily take some report, and that the small the defendants were willing to give an undertaking to have the drain scoured and cleansed at the point where the effluent entered. Mr. Justice Low directed that the evidence should be furnished by the defendants to the plaintiffs at Selby by Monday, and that the motion should come on for hearing to-day (Wednesday).

MANITOBA PARLIAMENT BUILDINGS: ALLEGED CONSPIRACY WITH CONTRACTORS.—Sir R. P. Roblin, former Premier of Manitoba, with Mr. W. H. Montague, Mr. J. H. Howden, and Mr. G. R. Coldwell, all members of the late Conservative Government of Manitoba, have been arrested on a charge of constraint to define the conservative of the late Conservative Government of Manitoba, have been arrested on a charge of constraint to define the constraint of t conspiring to defrand in permitting the contractors for the new Parliament buildings to draw large sums of money for work not performed, and collusion to increase the prices under contract. The arrests are only technical, as the accused consented to appear in Court without accused consented to appear in Court without compulsion. All four were released on £10,000 bail each. It will be remembered that on May 12 the investigations of the Royal Commission appointed to inquire into charges made by the Opposition in connection with contracts for the new Parliament buildings, led to the resignation of Sir R. Roblin's Government. In the general elections on August 6, 40 out of 49 seats were carried by the Liberals.

THE RISKS OF SKETCHING.—Mr. Alexander Wallace Rimington, F.S.A., R.P.E., the well-known etcher and water-colour artist, of well-known etcher and water-colour artist, of Pembridge Crosceut, London, was charged at Beaumaris Police Court on Saturday with a breach of the Defeuce of the Realm Act by making a sketch of a section of the Menai Straits without having a permit. Admitting the offence, he pleaded ignorance of the fact that he was sketching in a prohibited area. He that he was sketching in a prohibited area. He produced income-tax, rent, and rates receipts, together with a British Museum reading ticket and an old passport, to prove his identity and his British nationality. In view of the great uncertainty as to areas in which sketching was prohibited, he begged the Bench to communi-cate with the Home Office in order to get such cate with the Home Unice in order to get such areas clearly defined by authority.—The Bench dismissed the case, but said the police were justified in their action, and begged Mr. Rimington not to repeat the offence.

The Eastbourne Rural District Council have appointed Mr. William Walker, of Cannock, district surveyor.

The parish church of Burton-Hastings, near Nuneaton, is about to be restored and researed at an outlay of £1.150.

New Council schools are to be built at Wyggstown, Leierster, from plans by Mr. Howard H. Thompson, of the latter borough.

The testing of the Upper Medway, on the completion of the Conservancy Board's improve-ment scheme, took place on Tuesday last week, when a barge 75 ft. in length, and laden with ient scheme, took pince on twentage as a chemical barge 75 ft. in length, and laden with 20 tons of ballast, was towed up the river to be before by the strain ing "Keston." The 120 tops of ballast, was towed in the river to Tembridge by the steaming "Kesten." The centraceompanied by a monor-launch, left the VII S init? Horseway at Maids one, the beundary of the Upper M dway Conservance Board, et 3 a.in., and entered the Toubridge Town Lock some eleven hours later.

The invitery surrounding he disappearance of Mr. Hard E. West, late a secunt surveyor to the city council of Canterbury, his at length been solved. Mr. West was connelled by a breakdown in beath to resign his position under Mr. A. C. Turley at Canerbury, and went to his father's house at Weckhambreaux on Angust 16. He discussated from there on the 23rd, and no trace of him was discovered until Thursday night, when his body was receivered from the Lesser Scour River three miles from his home. The mystery surrounding he disappearance

### Correspondence,

ARCHITECTS AND THE WAR OFFICE. To the Editor of the Building News.

Dear Sir,-My attention has been drawn to letter in your issue of August 25, headed More War Department Inaccuracies," signed by Mr. C. Stanley Peach, in which certain charges of inaccuracy are brought against Mr. Tennant, M.P., Under-Secretary for War, in a reply to a question addressed to him in Parliament,

In your Editorial column you comment on

The reason for the alleged inaccuracy that whereas Mr. Tennant stated that the offer of the Royal Institute of British Architects was made in May, Mr. Peach points out that the offer was made in the previous

September.

As a matter of fact there were two offers made. The first (in which the President R.I.B.A. did not appear) was made by the Architects' War Committee, who in September, 1914, offered to his Majesty's ber, 1914, offered to his Majesty's Government an assurance of the loyal and energetic support of the profession in any direction which may be found practicable and desirable," leaving the Government " + . in leaving the Government dicate what form of assistance would be of This letter was acknowledged most value. on September 23, 1914. It was thought that the best way to take advantage of this offer was to obtain the names of gentlemen who would be willing to serve under the War Office, and such a list was asked for and obtained.

The offer, however, to which Mr. Tennaut referred in his reply was a subsequent one, and went much further than the above. E. Newton, president of the Institution, called at the War Office on May 13 and there laid a definite scheme before the authorities. This scheme begins as follows:—"In the first month of the war the R.1.B.A. made a general offer of assistance to the War Office and to other Government Departments in all matters in which its special qualifications might be of service. This offer was accepted in general terms and, since that date, all quests which have been received from the War Office for advice in connection with architectural and engineering appointments have been promptly dealt with. It is now suggested that the War Office might make a more extended and systematic use of the R.I.B.A. organisation." Then followed a detailed description, illustrated with maps, of how the R.I.B.A. could assist the War Office. Copies of these were at once circulated to all commands in the British Isles, showing how responsible officers could take advantage of

the proposals.

Now in considering the accuracy of Mr.
Tennant's statement, it is necessary to consider the terms of the question. The member who made the enquiry asked: "Whether early in the war the President of the Institute of British Architects submitted plans for wooden huts, and offered the services of a number of qualified architects and surveyors. and if full advantage was taken of the offer of such plans and services with beneficial

results?

It will be observed here that specific refer ence was made to the President of the R.I.B.A., and it appeared therefore that the question had reference to the second and mot the first offer of service.

Mr. Tennant's reply was: "The President of the R.I.B.A. offered the services of the Institute in its corporate capacity to assist in any work carried out by the War Depart This offer was made in May, 1915 by which time the greater part of the work

in the names of a table men, and severa - f

these have been gryen employment."
It will, I think, be seen that Mr. Tengrint answer was accurate. Although he did rat specifically allude to the earlier ofter, he may dicated that it was not ignored, by the latter part of his answer. The ofter of the Institute in its corporate capacity was not made until Mr. Newton's visit of May 13. Yours tru
R. H. Brade.
War Office, London, S.W., August 31.

## SLEAFORD CHURCH, LINCOLNSHIRE, AND THE S.P.A.B.

For the Elitor of The Building News

Sir.—In your issue of 18th ult., in "Currente Calaino," there is a quotation from the Guardian on the subject of unnecessary interference. sterference with old work, instancing Sleatord Church, Lincolnshire, where carving which had lost its defined outline owing to decay has been renewed in stone, to insert which old stones which were still performing their structural duty were removed. This work, it is satisfactory to note, has now been discontinued owing to the interference of the church authorities.

I have been engaged at Sleaford. The carving referred to was so perished that another winter's storms would have obliterated it beyond recall. The carving was carefully copied before it was impossible to do so, only such new stones being inserted as were absolutely necessary. The statement in the last paragraph is untrue, and 1 am authorised by the church authorities to state that "the work was stopped simply because our Building Fund was temporarily ex hausted, but after the war we have every intention of completing the work." The other statement is:—"The south door of Tickhill Church, Yorks, has been entirely renewed, though the stonework was nowhere so badly affected as to be of danger to the I have also been, but only during structure. the last year, engaged in superintending some very conservative reparation at this church; during that period the south doorway has not been touched.

Whilst all must sympathise with the expressed motives of the S.P.A.B., one must regret that their efforts are sometimes stultifield by unfortunate methods of procedure. Their ideas of protection are in direct conflict with the advice issued by the R.I.B.A. addressed to promoters of restoration.

I think that in making statements such as those referred to the S.P.A.B. should at least he sure of their facts, and also pay a httle respect to the opinions of those who also have spent their lives in the study of ancient buildings, and yet venture to differ from them in technical details.—I remain.

W. H. Wood, F.R.LB.A. 20. Collingwood Street. Newcastle-on-Tyne.

The Essex Archaeological Society has just The Essex Archeological Society has just sustained a less by the death, in his cignty fourth year of the Rey, James Wright Kenworthy, for twenty seven years the vicar of Braintree, and latterly a resident of Colchester.

There are also aromatic sines to weighing and so king, non-hinery trivialing into carts or railway wargens, and for the discharge into constant vessels on tongs. The elevator is built at the east end of No. 9. Dock of the horizoness part the discharge into constant at the east end of No. 9 Dock. It has subways on b the sides of the dock, in which run band acceptoral arranged so that during the time general eargo is being dealt with portable elevators

and conveyors will be used for discharging parcels of grain from vessels to the granary THE GUILD HALL, HENLEY IN ARDEN. On Thursday, without orientary the doors were opened to the patche of Henlands and Califf Hall before the Califf Hall before the company. ley's old Guild Hall, whose existence was practically unknown to the mhalatants of the little town until the work of restration was taken in hand. Stucco had the exterior tim-ber, and laths and plaster covered cak beams and rafters. The building was let oft in tenements, and the Warwickshire County Council had made an order for its demoition. The Lord of the Manor, becoming the owner of the site, determined to restore it is far as nossible to its original appearance. This has possible to its original appearance been done upon lines suggested by Mr. Alfred Redway. Exteriorly at now presents the appearance of a half-timbered building. Part. the ground floor is occupied as bank premises. and the remainder is at present tenantless. The front of the building is add incl with the escutcheons of the founder and several other former lords of the manor. A stancase leads up to the guild room, a lofty apartment ever looking the main street. This guild room up to a year ago was partitioned off for bedroom purposes, while the old oak brains at I ratters were hidden from view by a low plaster outling. The oak woodwork now disclosed is a principal feature of the hall, and is still in a principal feature of the half, and is still in a fairly good state, though eaten away here and there. The flooring of the same wood has been renewed in keeping with the style of the place. The stained glass window in the little apartment known as the Lord of the Manor's room, contains a representation of St. Authory and the arms of the Settins, Earls of Dufley.

The leaf is announced of Mr. John McKissack, of the firm of Messrs, John McKissack and Son, architects, 63, West Regent Street, Glasgew. He had been in professional practice in Glasgew for fifty years, and had designed many charches and other important buildings in Glasgew and the West of Scotland. For about two years Mr. McKissack has been laid aside by ill health, the practice being carried on by his son and partner, Mr. James McKissack.

### TO CORRESPONDENTS.

We do not hold ourselves responsible for the opinions of our correspondents. All communications should be drawn up as briefly as possible, as there are many claimants upon the space allotted to correspondents.

It is particularly requested that all drawings and all communications respecting illustrations or literary matter, books for review, etc., should be addressed to the Editor of the EURIDING News, Elfingham House, I. Arundel Street, Strand, W.C., and not to members of the staff by name. Delay is not infrequently otherwise caused. All drawings and other communications are sent at contributors' risks, and the Editor will not undertake to pay for, or be liable for, unsought contributions.

for, unsought contributions.

\*\*\*Trawings of selected competition designs, important public and private buildings, details of old and new work, and good sketches are always welcome, and for such no charge is made for insertion. Of more commonplace subjects, small churches, chapels, houses, etc.—we have usually far more sent than we can insert, but are glad to do so when space permits, on mutually advantageous terms, which may be ascertained on application.

When favouring as with drawings or photographs, architects are asked kindly to state how long the building has been erected. It does neither them nor as much good to illustrate buildings which have been some time executed, except under special circumstances.

nces. Telephone: Gerrard 1291. Telegrams: "Timeserver, Estrand, London."

### NOTICE.

NOTICE.

Bound copies of Vol. CVIII. are now ready, and should he ordered early (price 12s. each, by post 12s. 9d.), as only a limited number are done up. A few bound volumes of Vols. XXXIX., XLI., XLVI., LXVII., LXVII., LXVII., LXVII., LXVII., LXVII., LXVII., LXVII., LXVII., LXXII., LXXII., LXXII., LXXII., LXXII., LXXII., LXXII., LXXXII., LXXXIII., LXXXIII., LXXXII., LXXXII., LXXXIII., LXXIII., LXXI of them soon run out of print.

Handsome Cloth Cases for binding the BUILDING NEWS, price 2s., post free 2s. 4d., can be obtained from any Newsagent, or from the Publisher, Effingham Honse, 1, Arnudel-street, Strand, W.C.

### TEMPORARY MILITARY HOSPITAL WARDS.

The problem of providing additional hospital accommodation has been one of the most pressing of the war. In the case of one great London hospital, a solution has been found in the provision of temporary wards in the open spaces between the permanent blocks. We are indebted to Mr. Percivall Currey, the architect of St. Thomas's Hospital, for the present information and the accompanying plans and section of one of the new wards provided at this institution.

At St. Thomas's accommodation has been found for 332 beds for patients and 40 for orderlies, in six temporary wards, erected by the War Office under Mr. Currey's supervision. It will be seen from our block plan of the hospital, Fig. 1. that the temporary wards are generally of the same length as the permanent wards, extending from the main corridor to the loggia that connects the ward pavilions on the river frontage. Single pavilions on the river frontage. Single wards of two rows of beds accommodate 30 patients, the double wards having the number of beds indicated on the block plan, which shows the temporary buildings cross-hatched, it being noted that the baths and sanitary accommodation are, in all cases, excepting the 80-bed ward, arranged between the columns of the open loggia.

The cross section of a 66-bed ward, Fig. 2, and a plan, Fig. 3, are given herewith. It will be seen that two 20-ft. wards are thrown into one, excepting that a central screen 5 ft. 3 ins. high is arranged, and are roofed with collar-beam roofs, carried by the side walls and a fir girder upheld by steel stanchions. The height of the wards is 12 ft. 6 in. to the ceiled collars. and 10 ft. 6 in. to the heads of the quarterpartition walls, giving about 750 cubic ft. space per bed. Between every bed is a vindow with double hopper-type opening ashes, so that the wards approach nearly o the reputed ideal hospital ward—the pen air—and have perfect ventilation, eing excellently lighted. They are unoubtedly a model of their kind, and hould be carefully studied by all ingrested in the problem of providing additional temperature. onal temporary hospital accommodation. The whole of the wards are framed of imber, with 4-in. by 2-in. quarters, and in. by 3-in. heads and ceils. They are rected upon brick and concrete foundaon. About 3 ft. of ground is excavated, nd one foot of concrete laid, with 9 in. dimensions. brickwork under the main walls, and in. sleeper walls. As indicated, there three cross-sleeper walls carried right

timber girders strutted up from the area out in 1-in, rebated linings, with deal pavements. Here are arranged the servery, linen-room, and sisters' room. Central doors connect the main corridor conveniently for the hospital and medical staff. It will be observed that the wards and the structure over the area completely fill the interval from corridor to loggia and buttress and add stability to the whole construction.

sills and light transomes, both the upper and lower sashes falling back, with hopper-type cheeks of 3-ply board, the lower sash being rather restricted in the opening for the reason that the inter-bed space is necessarily restricted, and the 30° opening of the upper sashes would be inconvenient in spite of the fact that under each window is a small table, which Blocks of concrete, as our section in-forms a natural fender for attendicates, are provided as foundation to the others by the patient's bedside. forms a natural fender for attendants and

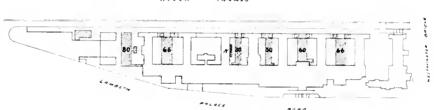

FIG. 1.—BLOCK PLAN, ST. THOMAS'S HOSPITAL.

when called upon to provide temporary above the lower sheet.

steel stanchions, which are 4 in. by 3 in., with base-plates, and are bolted by angle-asbestos slabs in two lengths, nailed to with base-plates, and are boffed by angle-plates to the 9 in. by 4 in. fir girder at the junction of the roofs. The rafters and collars are 4 in. by 2 in., with 7 in. by under the windows; but to make out, collars are 4 in. by 2 in., with 7 in. by under the windows, a certain amount of 2 in. ridge-piece; and the floor joists are sawing of the stock slab has been neces-6 in. by 2 in. upon 4 in. by 3 in. plates, sary. To keep water out at horizontal with 1 in. grooved and tongued boards, joints a narrow double-sided zinc angle We give these details in full because, is run behind the upper and appears when called much to provide temporary above the lower sheet. architect — by structure. the having in mind details suitable for pe:manent building-may be often in some doubt and hesitation as to scantlings and These details show what scientific disposition of a little material can accomplish.

custom povers the roofs, but in the form of Roman tiles, with ridges and hips of the same, while the valley gutters are land in ruberoid.

The partition dividing the two wards is of 2-in. plaster slabs, with deal cappang, forming a dwarf wall that fits snugly between the stanchion flanges. There is no doubt that the throwing of the two three cross-sleeper walls carried right of to the underside of the floor. Where the ward buildings cross the area next the main corridor, they are carried on the main corridor, they are carried on the control of the floor. The winds we openings are made to the control of the two wards into one greatly assists in ventilation, there being a larger total volume of

ur and a better and more controllable zeneral are movement. For heating the baths are arranged as shown on the plan, wards, gas radiators are employed, with with walling in 2-in, slabs. The baths flues carried through the walls and above and lavatory water supplies are all from

felt damp-course laid to all brick walls hospital drainage system. Between the ad to sheeper walls.

wall is arranged, with doors to the pleasant riverside hospital terrace, so that these accessory apartments are most completely isolated, in a sanitary sense, from the actual wards.

The beds, of military size, 6 ft. 6 ins. by 2 ft. 6 ins., are spaced 6 ft. apart. From two of the interspaces, as shown, are arranged emergency exits. From the loggia, patients can pass on to the hospital terrace, which naturally forms, with its charming river views, a pleasant place for convalescents. The building, cross-hatched, on the extreme left of the block plan is a temporary but for the accommodation of forty orderlies. Near by, in a basement of the medical schools, are further temporary quarters, mess-room, baths, etc., for eight sergeants.

The contract for erecting the wards was let to Mr. J. Carmichael, and it is almost literally true to say that the ink was scarcely dry upon the contract than the ground was out, urgency and despatch being the order of the day. The total The total cost has been £9.765 for 372 beds, including the forty beds for the hospital orderlies above referred to, and works out at a little over £26 per bed. The amount includes the cost of all fittings to lavatories, etc., complete, and also about £350 for new kitchen plant and utensils. Naturally, the addition of 372 beds to the hospital proves a strain on the normal kitchen department. The cooking for the temporary wards is effected in a special kitchen, K on the block plan. This serves the whole of the wards. At the same time, the serveries are equipped with a gas stove, boiling pan, and other conveniences.

We have personally inspected these new wards, and heartily recommend any hospital or institution or local authority to carefully examine the buildings. Unfortunately, we are faced with the necessity for yet further provision for the care of wounded. In Mr. Currey's designs the architect who may be entrusted with work of this nature will find an admirable model, and there are necessarily many little details of arrangement needing careful study. On these depend the comfort of the patients. A visit to St. Thomas's, too, may assist to bring cheer to the men who have been brought low in their devotion to their country.

Mr. Alexander Muir, sometime mason and builder, of Glasgow, of Dean Villa, 58, Aytoun Road, Pollokshields, who died on February 10 last, aged 90 years, left personal estate in the United Kingdom valued at £9,027, of which £7,716 is Scottish estate.

-

At the annual meeting of the Harlow Trust At the annual meeting of the Harlow Trust of Carnarvon, Mr. Alfred Richards, the chairman of the Finance Committee, replying to inquiries as to whether there were any indications of a revival in the slate trade, expressed his regret that there were none, nor were there any hopes of an improvement until after the war. The Government were probabilities had ling schemes on the part of public atter the war. The Government were prohibiting building schemes on the part of public builties, and for private speculators he did not know of any worse enterprise than building.

At St. Nicholas Cathedral, Newcastle-on-Tyne, the judgment has been read of the Chancellor of the Diocese, Lieut.-Colonel Errington, M.A. in the application of the vicar and churchwardens of the Cathedral Church in regard to the completion of the rood screen by altering the shape and dimensions of the cross and placing upon it the figure of Our Lord crutoffed. The Chancellor granted the faculty, confirming the erection of the screen, which had been erected in 1888 without a faculty. He agreed that the existing figures of SS. Mary and John were out of place, and should be removed. The vicar (Canon Gough) intimated that he should carry the case further. The Chancellor seemed to forget that at Chester Cathedral they had just erected upon its rood a linge figure of Our Lord on the Cross, and a figure of St. Mary and St. John, while at Wells Cathedral they were doing precisely the same thing. Nicholas Cathedral, Newcastle-onsame thing.

# THE ADDRESS IN THE ENGINEERING SECTION OF THE BRITISH ASSOCIATION

By Prof. H. S. Hele-Shaw, F.R.S.

The fact is the time is not an ordinary one, for the war which a year ago cast its shadow over the meeting of the British Association in Australia has, as the months have passed by, gradually infolded the most terrible page in the history of the world.

It is terrible not merely because of the frightful slaughter which has taken place, and which will yet take place, owing, on the and, to the gigantic armies employed, and, on the other, to the nature of modern warfare. A predecessor in the chair, one who has left many marks of his genius on the peaceful engineering works of the country. Mr. Hawksley, commented about fifty years ago on "the unhappy necessity of devoting so much of the science and skill of members of the Association to the defence of the homes of the people of this great nation. He further remarked, with great prophetic insight: "War is no longer carried on by means of mere animal courage and brute force; on the contrary, we perceive, much to our amazement, I believe, that the highest branches of mechanical science and the most refined processes of the mechanical arts are resorted to by the modern warrior for the purposes of offence and defence. And we are taught by the logic of the facts that the modern soldier must cease to remain a passive machine, but, on the contrary, must henceforth be trained as a skilled labourer, if not, indeed, as a skilled artisan.

I do not think, however, that either Mr. Hawksley or anyone else could have anticipated what refinements of skill and science would be brought to bear, not merely on the destruction of the human species, but of those ancient edifices of beauty which cost hundreds of years to build, and which cannot be replaced, or even the loss of those great works of engineering in the form of bridges and other structures which, though doubtless replaceable, represent the accumulated wealth of mankind. All this does not constitute, however, the worst feature of the war which is still raging. I do not know which will hereafter stand out in the blackest light: the callous disregard by our enemy of the recognised laws which have governed warfare amongst civilised countries hitherto, of which the recent murder of a defenceless submarine crew in neutral waters is an example, or the fact, of which there is now abundant and overwhelming proof, that this country, while animated only by peaceful intentions, was itself the real object and ultimate aim for the destructive effort of our enemy.

Fortunately, we now all know that our determination at any cost to ourselves to stand by our treaty obligation to a weaker country was really a fateful moment in the history of our Empire. Had we then failed, such failure would have spelt our own doom.

This is not the place to dwell at any length on this subject; but I cannot help pointing out that the whole attitude of scientific and professional men in this country at the beginning of the war shows how little they realised the real nature of what was before us. Thus my own predecessor, after the war had begun, in his presidential address in Austra'ia, used the words: "The discoveries in pure science and their innumerable applications to practical ends are ever a potent factor working for the common good." The truth is that the great majority of us did not realise to what uses science would be put in the mutilation and destruction of our fellow creatures.

and destruction of our fellow creatures.

Still, we are told by soldiers that practically any applications of science constitute legitimate warfare, and that the only way to escape from destruction ourselves is to employ all the resources of science in our own defence.

It is on these grounds that the meeting of the British Association for the Advancement of Science has been held this year, because science is proving such an all-important factor in the present war.

The mere holding of this meeting, however, with a vague sort of idea that science is

associated with war, does not seem to most of us to meet the real needs of the case The decision to hold the meeting was made m March 1c., six months ago. Since that time the nation has awakened to the fact that matters have become very much more serious, and we scarcely needed the solemn warmings of our responsible statesmen to enable us to realise this. We see our foe turning every resource towards the active prosecution of the war and bringing in the aid of every man towards that end. If the result were a small matter, we might pursue our way, as we did at first, with the fatuous cry, Business as usual"; but day by day it brought home to us that the Hymn of Hate, childish though it may seem, really represents the serious mind and deadly intention of our enemy. When I say this I know there are exceptions, and it is gratifying to find that at least one German guest of British Association acknowledged in print the generous manner in which the German guests were treated in Australia after the war broke out, even being given a passage home. This and much else warns us that our failure in this war means the loss of what has been built up in so many centuries, and what we value above all -viz., om freedom; and that this loss would be accompanied by atrocities and degradation beyond the most savage happenings of the past. It believes us all, then, who are members of it to show that the British Association, which has rendered such great services to the country in the past, can bear its share of the burden to-day.

Remembering how soon we forgot that

Remembering how soon we forgot that black December week fifteen years ago, and the lurid indication from the German Emperor that he and his people had the will to destroy us then, if not the power, and how swiftly we relapsed into national ease at the end of the Boer War, it behoves every man who can de so to take his share in making ready for the terrific struggle Germany is certain to put up in the arts and manufactures.

Now, when we look closely into the causes of Germany's great advance, we can learn lessons which we have been culpably slow to Although there are other take to heart. causes, first and foremost, and overshadowing all others, is the determined and whole hearted organisation of German industry. see it recently stated that the scheme above referred to (the Victoria Falls scheme) was lost to this country because the industrial banks of Germany backed their own manufacturers, and this is no doubt partly true, As I have already quoted, Germany's power in war is admitted to be her mechanical organisation, and the organisation of every material and engineering force to that end Just as striking, if not more so, is her organisation for the arts of peace, and 1 lately heard a very shrewd man of affairs express his amazement at Germany's entrance into war when by peacefully pursuing the way she was going she would have dominated the world commercially in a few years time, and, in the words of the speaker might in many manufactures have made as practically bankrupt. It is undoubtedly in the matter of scientific organisation, e more than the organisation of science, that Germany has achieved such wonderful re sults, and it is therefore in this direction that we must leave no stone unturned we wish to have any chance of holding our own in the future. I will indicate a few of the matters in which there is ample scope for doing useful work in the above direction.

### Enternos.

A sign of the times is the inclusion of an Education Section in an association for the advancement of science. This has not been done on the narrow ground of improving the teaching of science in schools, but because it is now recognised, and this none too soon, that the whole problem of education must be treated in a scientific manner.

When the subject of engineering education is mentioned we are apt to think only of the

training of such equations is have been a sidered in a recent report, and by the Institution of Cross Engineers, and to exclude as that report purposely does, the training of our artisms and foremen. We certainly do not connect the idea at all with the training of the artisan himself. As a matter of fact, while high scientific training of the professional engineer and mandriact ner is of vital importance, the proper education of the men whom he will have to control recarcely less see. The latter education may not be of the same kind, but it is just as vital to the country, and its present condition is a serious evil.

A well-known American, in the "Clother of Electric Review," writing on the "Indicational and Corporate Development of Indicational and Corporate Development of Indicational and Corporate Development of Indicational and Corporate out that theoretically the aim of both employer and employer is the same—namely, the efficiency of indicating duction to increase the return of the investment in labour, and in capital. Coferto mately, however, as he remarks, "The relations between the two have frequently lossy hostile industrial warfare over the describations of the returns rather than a operator of for the increase of financial returns of both parties."

One of the most lamiliating thous of the present war has been the mutual relation. the two in this country in what is probably the most critical period in our history. I will say more later on this subject, but there is no doubt the subject of industrial education needs earnest consideration. Take the first, the education of the professional man —the class, for instance, joining such insti-tutions as the Civil, Electrical, or Mechanical Engineers; we find in one respect a most satisfactory progress as to what is insisted upon before such men are allowed to join one of these bodies. All such institutions now demand technical diplomas or university degrees, and, in addition, satisfactory evidence of practical training. But to prevent injustice to the man who may be self taught, they hold examinations conducted by recognised men of standing in scientific and technical subjects. Great as this progress has been in recent years, there is a great ded to be done. In the first place, professors and teachers of engineering and technical subjects have to deplore the miserable previous training of a large number of students. It seems still to be a common idea that if a boy is unable to make any decent progress in the usual school subjects, he can be sent to a technical school if he is useful with his hands, under the pathetic impression that the success of the engineer depends upon los hands rather than upon his head; and the first year or two at a technical school college is thus taken up with a work that ought to be done at a secondary school. It is not fair to put all the blame upon the school, for I have known students coming from the classical side of such a school with no knowledge of science, and very little of mathematics, who have taken the highest places in the engineering course, and after entering their practical work, have rapidly risen in the profession; and this was because such men had been well trained to apply their mind to any subject and had a sound foundation upon which to build. This only shows that a good student will always rise to the top, and does not prove that the present school system is the best for an average boy, or makes him work as hard as, for instance, the corresponding school in Germany does. A large number of thinking men are convinced that our whole education system seriously needs reform. I say this not merely in reference to scientific education and technical training, but to the whole attitude of mind of the young of all classes of the community towards the serious works of life when they leave school. I will allude to this under another heading later on. In the matter of education and its bearing upon technical training, we have, then, a good deal to learn from Germany. There are some There are some things that we think are quite as good, if not better, in this country, but there is no reason why we should not try to find a way to adopt the better features of education from our enemy, and, while retaining independence of thought and originality, inculcate firmer

<sup>\*</sup> I regret to say this forms a striking contrast to the brutal treatment meted out in many cases to British visitors in Germany.

discipline, for there is surely a happier mediam in this matter.

There is the matter which calls for remark before I pass from this subject. I see in the report above alluded to there is a great divergence of opinion concerning the wage earning value of highly technical students. Here, again, is a matter which in itself is worth a very careful discussion. The ques-tion depends first upon the student himself. next upon the kind of training he has had, and then upon the nature of the work he is expected to do. The blame in not getting is expected to do. The blame in not getting the best results from a well trained student is very often due to the employer, and our section might do something to bring pro-fessors and employers into closer touch; both employer and professor may have something to learn from each other.

In leaving this subject I cannot help point out what important continuation schools are to be found in the meetings and discussions of the younger members of various engineer ing societies, and how much a young engi learns in the preparation of a paper Anyone who is accustomed to take the chan at such meetings will bear witness to the excellent outlay of money represented by th award of prizes and medals for such work Many men to my knowledge have got jobs through thus showing acquaintance with a special subject or originality of thought.

### Research.

is one thing If there another which the British Association be congratulated upon, it is the work which it has done in the matter of research, and it is very interesting to go back to the earliest days, more than eighty years ago, and to see how, in very different days from the present, research in all branches of science was encouraged, and what a potent factor the various meetings have been, not only in actually fostering the work of research itself, but in obtaining the recognition which is accorded to-day. Amongst other things, the National Physical Laboratory stands largely to its credit, as having been first powerfully advocated at one of its meet-This section has not been behind the others, and at the present moment there are three Research Committees—viz., those on Gaseous Explosions, Compound Stress, and Impact. The work of the first of these is so valuable that its results have been published all over the world.

To-day there is a more general recognition of the importance of research, and the recent institution by the Government of a committee for the organisation and development of scientific and industrial research is the latest indication that the nation is beginning to

realise its importance.

So far from all this making our work less necessary, there is all the more reason why we should have a permanent Committee of Research, because one of the intentions of the new Government committee is to utilise the most effective institutions and investigators available, and the statement is made that one of the objects of the Government Research Committee is to select and co ordinate rather than originate, and that one of its chief functions will be the prevention of overlapping between institutions and indiwith the organisation in England, Wales. Scotland, and Ireland. Now, the great advantage possessed by this association is the fact that it includes not only Great Britain and Ireland, but all the colonies, and, in deed, one of the three researches above-men Australia tioned is being carried out in Another research of the association is being carried out in Cyprus; and work is also being done in such places as Jamaica and Ezypt It is more important, therefore, than eve that the British Association work in research should go on, as, since its members are drawn from all parts of the British Empire, its influence should be correspondingly great.

There is another reason for research being subject of a permanent sub-committee, and that suggestions for new work are more likely to be matured, and work of an advisory nature made more practical than is possible at one annual meeting.

There is yet one more reason, which is that although we have made some progress, we are still far behind Germany in the organiare still far belind Germany in the organi-sation of research. There is no doubt that our students and scientific men are quite capable of conducting researches, but the training for this is like the training for the officers of an army; it cannot be done hastily, and, indeed, men themselves cannot be obtained for this purpose without years of preparation. All such work must be done as a factor in the reorganisation of our manufacturing and commercial resources in the great struggle that lies before us.

There is one subject which affects both education and research, and might be a matter to be reported on by our committee It is very rarely that a professor is both a good teacher and gifted with the power of original research. Even when a professor or lecturer is so gifted, however, it is almost impossible for a man really to devote himself properly to research and at the same time undertake the duties which are attached to a professorial chair. Why not face this sub-ject boldly, even relieve the bad lecturer (there are man who admit their failure in this respect) of a certain amount of his work, provided he is doing well in research; or for the man who can do both well, see that he not only has efficient assistance, but even more-that he is given the opportunity of devoting long periods (for instance, alternate years) entirely to research.

There are numerous other questions which would come up under this heading, and which could be usefully dealt with by our com-

mittee.

There is one more subject that we might consider, and that is a better differentiation of researches on purely industrial work, such as are often of a most profitable nature to the professor or research student, and those which are of a purely scientific character. While it is only right that every successful research, even if conducted at the expense of a public body, should bring solid return as well as fame to the worker, some steps should be taken as to the fair and equitable distribution of the proceeds. I see that one distribution of the proceeds. I see that one of the proposals of the new Research Committee is that discoveries by institutions. associations, bodies, or individuals in the course of researches aided by public money shall be "made available under proper conditions for the public advantage. discovery is patentable, I assume, it would be protected at home and abroad, unless wish to spend public funds as much for the wish to spend public itinds as much for the benefit of foreign trade rivals as for out-selves. This is one of the many matters in connection with which a British Association committee might from its cosmopolitan character render great service.

### STANDARDISATION AND THE METRIC AND DECIMAL SYSTEM.

One of the favourite jibes at this country is our supposed utter want of system in re gard to our standards and systems of measure With regard, for instance, ment generally. to the decimal system, it is frequently stated that thirty or forty countries have adopted the metric system, while only three retain the inch as a standard. It must be renembered, however, that the population and wealth of the three latter are at least equal to, if not greater than, all the others, though this does not really prove anything, except the difficulty of the subject, and that here is a great deal to be said for both sides. In the report of the Decimal Association last April the hope is expressed that one the changes for the better arising fr the war will be a reform of our weights and No class of the community would he affected more closely than the engineer, and engineers cannot fail to be interested in the question as to whether the general and immediate adoption of the metric system would or would not be a valuable means of assisting British firms in their competition with Germany and Austria in countries where that system is in vogue. Although it is very nulikely that a wholesale change is imminent. it is certain that the metric system is gradually spreading, and in the United States

British Association has over and over again had the subject before it, and our committee might be of service in making a report on the present state of the matter.

One thing is certain: the Committee might be of assistance in recommendations which would bring into line all British engineers in duplicating tenders for countries which

have the metric system.

Coming to standardisation, here we have nore ground for satisfaction. The Engineermore ground for satisfaction. The Engineering Standards Committee during the last ten years has done a work which is quite equal to that in any other country of completing standardisation of all important matters in engineering, and, moreover, has secured the recognition of these standards in all public As giving some indication of the contracts. range of this work, it may be said that there are more than sixty committees for dealing with every conceivable engineering matter, from bridges, ships, and locomotives, down One of the last of these to electric lamps. committees, dealing with the automobiles, has eleven sub-committees, many of which have already completed their work. It is almost impossible to do justice to the extraordinary achievement of bringing order out of what was apparently hopeless chaos, and to the benefit of the British engineering industry of this work, largely due to the energetic secretary, Mr. Leslie Robertson. We may justly pride ourselves that this section was a pioneer of standardisation, by taking up the subject of small screws, its work being taken over ultimately by the Standardisation Committee.

There is yet work to be done, however, and one matter of great importance would be to get a universal standard of temperature for instruments of measurement other than zero. A temperature, for instance, of about 62° F. would make steel rods' measures more practically workable than at present.

In connection with the subject of temperature and standardisation, I recently came across a statement by the General Secretary of the International Electrotechnical Commission ("Journal," January, 1915) that the want of uniformity in the rating and testing of electrical machinery has been a serious evil, and he goes on to say: "The German standardisation rules, for instance, which, through well-organised and combined effort on the part of the German makers, had, previous to the war, become widely recognised on the Continent of Europe, as well many countries to which British machinery is exported, by permitting a higher temperature rise than is considered good technical practice in Great Britain, certainly have not assisted the British maker in foreign markets.

### EXHIBITIONS AND MUSEUMS.

In recent years a large number of commercial exhibitions have been held of all branches of machinery, and it is satisfactory to note that one of the features of such exhibitions has been the holding of scientific lectures and the inclusion of the exhibition of scientific instruments and apparatus, and also exhibits showing the relation of scientific experiments to engineering work. In some of the prito engineering work. In some of the privately organised exhibitions with which I have been associated myself the scientific men have been invited to take part when the general lines had been settled on which the exhibition was to be run, and thus we had comparatively little influence. I have thought from time to time that it would be well if a permanent committee of such a body as the British Association existed which could exert more direct influence, chiefly, of course by reports and recommendations. The course, by reports and recommendations. managers and organisers of such exhibitions would value assistance of this kind, and in return, would listen to suggestions which might materially add to the scientific value I know from experiof such an exhibition. ence that a British exhibition is a most important means of promoting British industry, for the number of inquiries that come from parts of the country and from all parts of the world show how much interest dually spreading, and in the United States and Australia very strong forces are on foot to bring about a change to that system. The have been held in London, the date of the opening being a week or two after the date at which the war begain, but was, of course This exhibition was to have been Anglo-Dutch, and though organised by private enterprise, was even in advance bringing in touch the consumers and manufacturers of the two countries. The "Beama Journal" quoted recently an American magazine in which the writer was advocating the support of a permanent Commercial Museum for industrial purposes, and this is what he said We produce a surplus of manufactures that must be sold. Our manufactured exports have about doubled in ten years—in truth a cause for satisfaction, and yet we have not accomplished enough. . . We have only made a beginning considering what we can do and will be forced to do in the future. Manufacturers must compete with old-established nations in the market they seek to invade." It is noteworthy that this museum, which is really a permanent exhibition, is a very complete organisation, containing, amongst other things, science laboratories.

It is sad to think that the great hopes held out of the Imperial Institute by the President of this Association, Sir Frederick Abel, at the meeting held in Leeds in 1890, have not been altogether fulfilled. The President expressed the belief that, amongst other objects, the Institute would combine "the continuous elaboration of systematic measures tending to stimulate progress in trades and handicrafts, and to foster the spirit of emulation amongst the artisan and industrial classes." It may be a very fitting time to bring forward the whole question, because it has often happened that an excellent scheme, which has somewhat languished, has upon its revival at a later time, when its importance was better realised, been crowned with success.

Another matter which might be considered is the question of departmental museums at the technical schools and universities throughout the country. The organisation of these is simply a matter for the enterprise of the individual professor in each department. The museums in the engineering department of the colleges with which I have been associated were very much appreciated by the students, who constantly were the means of securing fresh specimens, and, after they have left the college, continued to contribute articles of great interest, such as fractures, corrosions, boiler-plates, models, etc. This matter might be handled in a much more systematic manner, and possibly a report from our Committee, with a recommendation to the proper quarters, would be of use.

### PATENTS AND PATENT LAWS

This subject is well worthy of the consideration of the proposed committee, since progress in engineering, certainly on the mechanical and electrical sides, is largely dependent upon invention, which is not likely to be seriously undertaken without adequate protection, not entirely for the inventor, but also for those who really make the invention practical by means of capital and business support. A great deal of nonsense is talked and written about inventors, as if they were a special class of being, generally mad, and always impossible Some inventors are both. but the fact is, most engineers spend their lives seeking new ideas and devising new methods of carrying them out; in short, in inventing. It is of the greatest importance that every step should be taken to encourage sound invention, and to see that anything of value is secured for this country. Of course, every invention worth anything is immediately known in other countries, but I need not argue to this Section that the country which actually produces the inventions is at a great advantage, quite apart from the royalties payable on foreign patents. The foundation of the Munitions Invention Panel is a step in the right direction, and will doubtless be followed later on by Government Committees for peace inventions. Such committees or Government departments dealing with various industries will be assisted by suggestions from a body like this. Take for instance, the present state of colonial

There are many other matters; for instance, the question of extending the time of secrecy in the provisional patent. The "close" time in patents was the act of Chamberlain, and is a splendid legacy of that great man; but for really many important patents the close time allowed is not enough.

Another matter is one in which the German system has certain advantages—viz., in having two classes of patents. One of these is the patent "proper," which is only granted after the most severe search and criticism, and holds the usual period when granted. The other is a secondary patent, granted for the shorter term of five years, and is given for one of the hundred and one minor improvements and devices which though of real ville, only constitute small modifications in detail, and not new applications of principle.

Having previously spoken of German ways

pretty plainly. I should like to say here that I believe the suspicion of injustice to British and other foreign applicants by the German Patent Office is to a great extent, if not alto gether, unfounded. It is doubtless true that German manufacturers, in common with most of us, would like to avoid paying royalties. and it is, moreover, a common belief in this country that there is an advisory committee of manufacturers associated with the German Patent Office. This view is supported by such statements as in the prospectus of the Deutsche Maschinfabrik, which runs as follows:-" With the present day competition every firm is compelled to protect its new designs by means of patents, and watch that no other patents are granted which would seriously effect (sic affect) it. withstanding an utterance like this, my own experience and that of others is that if the stringent rules of the German system are observed, any valid application is granted. the motto which appears to guide the offi-cials being: "We will be just, but we cannot afford to be generous."

There are other matters, such as the question of giving wider powers to our Comptroller to refuse to grant where novelty is less than nacroscopic. Here again the German system of demanding that some definitely new effect might to some extent be followed, especially in view of the constant accumulation of published devices, some patented and others not.

### ORGANISATION.

This, I venture to think, is by far the most important question of any I have raised, and I will go so far as to say that I believe it to be the all-insportant one, as it practically embraces the others. If you do not agree with me, I feel sure it is because we do not understand the same thing by the word "organisation." When you speak of organisation to most people they immediately seize upon some small feature which may be to them of more immediate interest. It may be to them of more immediate interest. It may be the general arrangement of their accounts, their system of storekeeping, of dealing with their workmen, of the sales department, or bitly other minor details. If you take this narrow view of organisation, you will, of course, at once say that a sciediffic man his very little to do with it, and, indeed, the manufacturer, as a rule, thinking of his we has organisation, scouts the idea that a man of science can either know or have anything to say about it which is of any value.

any value.

Let me therefore take the dictionary definition. To organise is to "arrange or consti-

The all the transfer of the supply of real and the subject of the view of the subject of t

When we come, however, to these interdependent parts and their relation to the
whole, it is there that we find the weak
joint in the armour. It is in this respect
that Germany can teach us a striking lesson
in the arrangement of these interdependent
parts with respect to the whole. From the
top to the bottom the whole forces of their
industries are so thoroughly organised that
they get all that is humanly possible out
of the various factors. I do not limit these
merely to the wonderful organisation, of any
works, like Krupps, or the Deutsche
Machinenfabrik, or hundreds of other works;
but I include the organisation of all the
Government departments, together with the
bunks, the railways, and the shipping, of
that every facility is afforded for the world
commerce of the German Empire.

Taking only one of these details, I re-tember when at Liverpool, and the battle member of the Manchester Ship Canal was being fought, what facts came out as to the difficulties in the transhipment and handling of goods. The late Mr. Alfred Holt, for an stance, was one of the most earnest in pointgoods. ing out that the want of co-operation and organisation in getting goods from our manufacturing centres was adding largely to their cost, and actually exceeded the cost of traisporting these goods across the ocean. In Germany, on the other hand, the Government Germany, on the other hand, the vectoring steps in, and, by means of special differential rates gives the manufacturer every facility, and the lowest nossible rates for obtaining and the lowest possible rates for obtaining raw material and delivering the finished goods trail parts of the world. It was this organsion that not only rendered Germany so formidable a rival in times of place, but makes her so powerful in war This co-ordination in Germany is carred

This co-ordination in Germany is carried out in every industry in a way we generally have little idea of. For instance, the offer day, at a deputation to the Government, Mr. Runcimar remarked that the difficulty connecting the manufacturers with the connecting the manufacturers with the connecting staffs in this country is deep search but perhaps not altogether meurable. For ther, that the manufacturer must realise with the can get from the universities, and at university must know what the words required Dr. Foster, the treasurer of the Clemb Society, also said that "the Germa's we so imbued with the need of pursuing modern and efficient methods of education in applying science to industry that they hold in contempt a country which notoriously neglects such processes"; and he attributed this contempt as partly contributory to their cheefulness in entering into war with us.

Now, while these remarks are undoubtedly true, they are only a part of the truth. The

evil s far wider to in in any special applicatton, for, as the German knows perfectly well, there are innumerable individual case of organisation in this country of equal effi-ciency to any in his country, and he is glad chosen to learn from special cases. Let us take the and I do so because it shows that the man of science is capable of industrial and manufacturing organisation, if he turns his mind to it. A refer to the case of the Is me of Barr and Strond, Limited. As you know, the founders of this firm were originally colleagues in the Yorkshire College former, Professor Barr, occupied the presidential chair of this section three years ago, and they together invented a range finder. Now, whatever the most of the whatever the merit of the range finder, it is safe to say, like every other important invention-tor instance, the turbu e-that the invention alone would have stood a small chance of concarg into practice. In fact, to make the invention is, as a rule, the beginning of the duf-Professors Barr and Strond, however set to work to carry their invention into practice, and did so with such effect that prictice, and did so with such effect that their works, which began on quite a small scale, rapidly grew. The first part of the new works was opened with about innety hands, all told, in 1904. In the course of ton years it has increased to such an extent that there are now 1.700 employees. Those of its who have visited the works at Glasgow know the almost perfect way in which the whole arrangements are made, not merely for the scientific side, but for the comfort of the men, including the working dress, which in itself becomes a uniform. It gives some idea of the scientific side to know that there are at the present moment twenty-three men with high university qualifications. most of them with university degrees, and many of them men who were absolutely the first on the college list in the final examinations. This industry is another illustration of the lead given to Germany by this country because the Barr and Stroud range-finders were brought out before any of the German range, finders of the kind now being made, the Germans having followed in their lines and copied them in many respects. I have enlarged upon this, because I cannot help pointing out that the Barr and Stroud range finders have had no small effect in the mar vellous precision of our naval guns, and in will no doubt pass through your minds what we owe to private enterprise, which started the manufacture of the turbines, rangefinders, guns, and other naval features. we think of such battles as those off Heligo-land or the Falkland Islands.

The other day Field-Marshal von Moltke stated, and there is no reason to disbelieve him, that, great as was the storage of ammi-mition and shells before the war, the enor-mous demand for exceeded all expectation, and Germany found herself for a time in the same plight as her enemies; but he further stated that Germany's emergence "from this dangerous position was largely due to the extraordinary organisation, which included not merely the adaptation of their factories for munition purposes, but capacity for work of the people, and the patriotic spirit of the

German workmen.

THE RELATION OF EMPLOYERS AND WORKMEN. This bring the to consider what is probabi-Phis bring the to consider what is promote the most serious feature in our national Fig. to-day, which I have already alluded to under the heading of education—viz., Curellation of employer and workman. It is hopeless, as long as there prevail such theas as seem to do at present, to think of any sound organisation of our industrial system taking place, because the interdependent parts are not arranged with respect to the whole; they can never be arranged until we change radically. Now, as one who has served an apprenticeship, who has taken his money weekly from a tin box with Lundreds of other men, who has been a member of the Amalgamated Society of Engineers was working as an engine fatter when Whitworth scholarship made a collage career possible. I am the last man to put this evil down entirely to the working man. I he windividually be is just as capible of patriotism as any other class. Get nim by himself, even the men whose strikes have

caused such despondency in the minds of Allies, and who have seriously jenjarvery existence of the country, and you will find (except in the sort of case to be found in all classes of society) that he, as an individual, is willing to make sacrinees and, it necessary, to give himself for his country. The truth is that the canker which is cating the heart out of our industrial life is due to an entirely wrong attitude of mind. For instance, however much we may sympathise with men who see a loss of employment in the introduction of Jaboursaving machines, some means should be found by which they can share the benefits to the State and to their employers by the introduction of such machines.

Again, the questions of piecework and overtime must be seriously considered by the State, and not allowed to become the subject Once more there is of disastrous disputes. the question of a standard wage. It is against the cternal laws of Nature to try and keep living beings at one dead level of equality and merit-i.e., it is against the law of the survival of the fittest. The trade umons have a great opportunity of placing their country and themselves in a leading position amongst nations if they will courageously grapple with a great problem by recognising degrees of merit and corresponding degrees of payment. These are a few of the man, matters which must be dealt with in the immediate future.

The matter of labour disputes is so serious to demand plain speaking. It must be admitted that there are many employers and companies which, to satisfy themselves and their shareholders, extort the largest possible dividends and pay the smallest possible rate of wages, and do so apparently without the slightest idea that the men and boys under them are capable of education and personal influence Can it be wondered, then, that men under these conditions are willing enough to listen to the orator who merely appears to their fighting instincts, and to join in the game of grab as against the employer On the other hand, strikes have occurred when employers have honourably carried out their obligations and undertakings, and the men have shamefully departed from an agreement made by their chosen leaders, throwing over the leaders the moment they have fancied it to their own selfish interests to deso, and without a single thought of their duty to the community as a whole,

We have recently seen the Prime Minister and other leading statesmen struggling, some-times in vain, to bring large bodies of men to a reasonable state of mind. Is not this (and I speak without the slightest reference to purty questions) a case of Nemesis over takınır üs for having in so many cases pandered to the selfish instincts of large bodies of men in order to secure their votes, instead of steinly telling them unpalatable truths'

There was recently an intensely interesting article by the late Professor Friedrich Paul son, previously Professor of Philosophy in Berlin University, published in the "Educational Review," of New York. In this tional Review." of New York. In this article, the subject of which was "Old and

like minds, though it renders them excessively tiresome people to dwell among in peace time, enables their Government to extract every ounce of energy in the conduct of a war. He further went on to say that the British Empire "could not have been created by minds like these, but it should not be forgotten that in the concentration necessary to national effort in a struggle like this the German system of seif-subservience to the State has enormous advantages.

One of the tasks to which the British Assocutton might bend its energies with the greatest benefit to the country is to bring about a reform of our educational system, so about a reform of our educational system, so that while we do not kill individual enter-prise and freedom of thought, which have contributed so largely to the political organi-sition and constitution of the British Empire, of the value of which we have had of the value of which we have had such wonderful evidence from our colonies and dependencies during this war, we seek to implant in the minds of young and old those ideas of discipline and service to the State the want of which so seriously threatens the successful organisation of our industrial

### CANTERBURY CATHEDRAL \*

A lecture on this building, illustrated by about eighty lantern slides, was delivered at the Royal Photographic Society's Exhibition, Suffolk Street Galleries, on Thursday evening, by Mr. R. P. Howgrave Graham, F.R.P.S., M.L.E.E. Mr. Alvin Langdon

Coburn occupied the chair.

The lecture was limited to the main struc tural features of the existing cathedral church, and it was explained that with ittwo great crypts, its double transepts, and the Trinity Chapel and corona beyond the choir, it afforded a subject wide enough to need considerable compression in the available time, even if the numerous important tombs and the extensive monastic ruins were ignored. The slides shown formed part of a collection of 580 photographs taken by the lecturer, illustrating the Cathedral and Benedictine Monastery of Christchurch, and Mr. Graham introduced them by pointing out how the unique interest and value of the buildings were enhanced by the remarkable preservation of a series of records which enable us to date the more important parts within a few years and to follow the great rebuilding of 1174-1184, after the devastating fire of the previous summer, so closely that walls, columns, and vanlting can even be dated month by month. The history of the building operations was developed chronologically, and after a few words about the Saxon and Norman

a few words about the Saxon and Norman. The following illustrations of Canterbury Cathedral have appeared in The Building News during recent years:—Ground plan of monastic buildings and cathedral (by 1ste Rey Mackenzie E. C. Welbest, March 3, 1876; chapter house, north transport, nave and contral tower from cloisters (drawing by T. H. Currey), December 2, 1881; in the cloisters (drawing by G. N. Stevenson), September 24, 1899; do, (by E. Winbridge), March 4, 1870; 18th Century doorway to cloisters (National Silver Medal drawing by Harry P. Chiford), March 8, 1893; Norman staircase to registry (sketch by Maurice B. Adams), October 18, 1872; do, (sketch by J. W. Twist), September 12, 1890; infirmary arches and other ruins of monastic buildings (sketches by tional Review." of New York. In this article, the subject of which was "Old and New-tashioned Notions about Education," he nointed out that the whole of our educational system was going wrong, and that we could not escape the conviction that a tendency towards weakness and effeminacy was its chief trait. His three mottoes were, Learn to obey, Learn to apply yourself, Learn to repress and overcome desires; and he remarked with great truth under the first heading: "He who has not learned to sio this in childhood will have great difficulty in learning it in later life; he will rarely get beyond the deplorable and unhappy state that vacillates between outward submission and uproarious rebellion."

The other day a writer in the "Saturday Review" said, with great truth, that "what Great Eritain is suffering from acutely and dangerously at the present time is the absence of discipline," and a neutral writer in the "Times temarked as follows:—"The uniformity of German effort, due doubtless to their myriads of well-organised, machine- to the truth of th

work at the west end of the crypt, the main part of the Norman crypt was described and allustrated by a series of excellent photo-graphs, attention being drawn to the fact that alternate pairs of columns had sculptured capitals and plain shafts, those between them having nearly plain capitals and shafts ornamented with spirals or scrolls. The existence of unfinished sculpture on one of the capitals is a most interesting proof that much—perhaps all—of the carving was done after the completion of the crypt, and suggests the intention to enrich the whole series. The lecturer pointed out how much architec-The lecturer pointed out how much architectural skill and energy in the south-eastern corner of England was associated with the Abbey of Bec, in Normandy, whence came Lanfranc, who built the first Norman Cathedral at Canterbury: Anselm and Ernulph, who rebuilt the choir and gave us the crypt as we now see it; and their friend Gundallah to whom we are the White Tananallah. dulph, to whom we owe the White Tower of London, St. Leonard's Tower at Malling, and other work at Malling and Roclester. In 1174 occurred the terrible fire so graphically and humanly described by the monk Gervase, and whether or no this caused the cessation of the work in the crypt. it marks the inception of grand and new ideas carried out by Walliam of Sens for the monastery. The restrictions imposed by the conservatism of the monks, who demanded that every fragment of old masonry uninjured by the fire should be utilised afresh, forced William to cramp his genius in order to avoid the destruction of certain chapels remaining untouched by the fire. A view of the choir looking north-east, and illustrating the curious construction of the choir due to the retention of the projecting chapels of St. Andrew and St. Anselm, was followed by one of the interior of Sens Cathedral (1143-68), taken from a similar viewpoint, and the remarkable resemblance in the two piers with foliated capitals and the system of vaulting showed the influence of Guillaume on the work in his native city. Guillaume's fall in 1178 from the scaffolding at the east end of the choir, and the continuation of his work by William the Englishman, give us a distinctively English eastern crypt and the Trinity Chapel and corona above, and these show incomparable delicacy and refinement, combined with a touch of Classic feeling which harmonises wonderfully with their semi-Gothic constructional principles. Such grand work left little needing to be done, and perhaps small financial resources for building during the Early English and Decorated periods, to which belong only minor features, such as a doorway, a unique screen, and a fine window in St. Anselm's Chapel, the last two being nearly as exactly dated as the work of the two Williams. Late in the Decorated period, however, is the exquisite bridal chantrey of the Black Prince, with its beautiful bosses, but this is built into the Norman transept of the crypt, and has no construc-tional significance. The nave, carried out by Prior Chillenden, in the Early Perpendi-cular style, was fully illustrated, and this Prior's somewhat inartistic but very busi-nesslike proceedings were emphasised by a slide showing his portrait in a vaulting boss, where he appears as a severe, hard-headed, and somewhat unimaginative man. The central tower, dating from the close of the fifteenth and the first few years of the sixteenth century, is a wonderful example old conceptions were in the melting-pot, and such art was rapidly decaying; it is, indeed, curious that Prior Sellyng, one of the curious that Prior Sellyng, one of the moving spirits of Renaissance thought, seems to have been responsible for the design and part of the execution of this tower, which was conservatively repaired a few years ago mider the direction of Mr. W. D. Carón. The lecturer gave illustrations of the exterior and of the buttressing arches introduced in the content of the content of the server of the content of the duced to strengthen the tower-piers, and concluded his lecture with a few remarks on modern works of restoration at Canterbury, good and had.

Mr. Pearson, the borough surveyor of Marlborough, has accepted the post of estate agent to Sir Audley Neeld, Bart,

### LOAD TESTS ON BRICK PIERS.

At a recent meeting of the National Brick Manufacturers' Association an interesting paper based on an investigation now being conducted in Pittsburgh by the U.S. Burean of Standards, in order to determine the physical properties of large piers when tested to destruction, was presented by Messrs, J. H. Griffith and J. G. Bragg, members of the staff of the Bureau. It is of interest to mention that Prof. A. V. Bleininger, the well-known cerume chemist, who has addressed several meetings of brickmakers in Canada, motion in an advisory capacity Canada, acted in an advisory capacity throughout the investigation.

So far, more than twenty-two piers have been tested.

As nearly as possible each pier was 50 in. square by 12 ft, high, except two piers, which square by 124t, high, except two piers, which were built 5 ft high. Each pier averaged 44 courses. The joints were about 5-16 in, thick. The qualities of brick used, kinds of mortar, ages of piers and results of tests are tabulated below. Three typical styles of bonding were selected for test—header every other course, every fourth course and every

Maximum Load Vitrified A.S.T.M. Load in in 16 COSTO Hard Spec. 1909	Kirid of Mortar	Age

seventh course; thus there were three types seventh course; thus there were three types of bonding for each set of piers. One of the 5-ft, piers had steel-mesh reinforcing placed in every horizontal joint; the other, every four courses; but the results obtained were inconclusive (see Conclusion No. 7).

### METHOD OF TEST.

Each pier was constructed in the laboratory on a steel plate 1 in, thick, levelled on the floor. The plate surface which was to rest on the base of the testing machine was planed. A plate 12-in. thick, with eye-bolts for crane connections, was laid on the top of the finished pier, connected with the base-plate by four vertical rods, so that the piers could be filled easily and set in the testing machine without injury. The top plate was removed after the pier was in place. The pier was levelled, the top covered with a thin coat of plaster of Paris, and the head of the mackine brought down, squeezing out super fluous material. The pur was then left for several hours to allow the plaster to set. Measurements of compression were made at several corners, as were also transverse measurements and strains between bricks.

As shown above, bricks laid in cement mortar stood up best. Cement-line mortar mortar steed up test. Cement-line mortar gave a'most as g od results. Piers using linne mortar were only about one-half as strong as those with cement; but it should be noted that vitafied brick laid up in lime interior, rather than by a special coffine most a when properly aged etherene y

### CHARACHERSTIC FAILURE OF PIERS

At about these fourths may mum load ver As around his elements may mum load ver-tical hair cracks began to appear. With contained barlag the pairs brown up are vertical laminations. This condition was in-duced by the bending of the individual bracks. causing them to split transversely. The bending is the result of nor uniform bearing proceeding from lack of homogenests of texture in the pier, in an indevedual brick or in the mortars

The progressive action of this cracking is most interesting. Sometimes very early in the test small harreracks formed in the upper or lower surface of a break, usually just under or near the vertical joints, and widened at the surface as the load increased. Finally, subdued sounds were heard, which increased in volume until, in the case of vitrified and hard-burned brick land up in lime mortar, a succession of popping sounds occurred frequently increasing until the sound became a loud "bubbling" in the final stages. When a brick split, the ones above and below tended to do the same, until the structure became a succession of strips, and failed either by spalling out in large masses or as a group of thin, isolated columns.

The following are the main conclusions reached in the investigation:—

(1) The strength of piers under vertical loading bears a close relation to the kind of brick used and the quality and age of the mortar

(2) The low strength of pers laid in lime mortar is attributed in the main to insufficient ageing, with a consequent lack of a proper carbonation of the mortar.

(5) Experiments seem to indicate that the strength of a pier is largely independent of the course bonding. The real function of bonds is to maintain a certain integrity and monolithic action of the masoury against initial strains induced through so'ting and "drying out" of the mortar rather than to of the mortar rather than to give any great increase of vertical strength.

(4) The elastic limit of the piers land up ru cement and cement-lime mortar was approximately one-half the maximum load.

(5) Piers fail through a tendency to separate into vertical strips caused by hending failure in the individual brick produced by nnequal distribution of the vertical load over the cross-section. This is aggravated by ineffective shearing and adhesive strength of the mortar

(6) A high modulus of rupture of the brick is more desirable than superior crushing strength. Higher modulus of rupture would be realised in practice by increasing the thickness of the bricks or by laying them on edge.

(7) A further study of the action of stelmesh reinforcing in the horizontal joints is recommended in order to ascerta a the load efficiency of piers having an outer shall of hard brick with an inner core of softer brick. This construction would be us I where a high-grade brick is not easily obtainable.

Exterior work is progressing recodly in the crection of the First Church of Chris's selectist at Wamineg, for which the Fort Gardy Construction Company are the general contractors. LIDRARY AND PICTURE GALERY. THE SCHOOLS, SHREWS VEHLERY.

This building, situated upon the rising and known as Kingsland, overlooking from the south-west the River Severn and the town of Shrewsbury, will form another nk in the chain of school buildings which was the ridge. One of the main purposes of the building is to house the famous election of rare books, and it will, ultieffection of rare books, and it will, ulti-nately, also contain a bequest of valuable later colour paintings of the English School. The plan comprises a wide entrance-hall, at one end of which are placed the reading-room and the picture-gallery, at the other, iso-lated by fireproof doors, the library, whose size and proportions are regulated by the inclusion of 17th Century bookcases from the old school building in the town. A librarian's room, store, and strong-googn A librarian's room, store, and strong-room for the storage of the more valuable books complete the accommodation. The design of the building is based upon the Jacobean tradition of the old school buildings, and is carried out in Grinshill sandstone and 2-in, hand-made red facing bricks, of varied shades of colour. Notable features are the bay window to the reading-room and the two colonnades to the south and north of the hall, forming respectively a porch and a loggia, from which latter the magnificent view across the river may be enjoyed. The roofs are supported by oak trusses, whose timbers contribute largely to the interest of the interior of the building. Red hand-made tiles, laid with "swept" valleys, form the roof covering, finishing with a half-round ridge tile, while the gable ends are coped, and terminate in moulded stone finials and projecting kneelers. The windows are filled with leaded glass, with a large number of opening casements: wrought-iron stanchions. with foliated heads, preventing unwarranted intrusion through the windows of the library, are also provided. The picture-gallery is lighted solely by means of two ranges of dormer lights close to the ceiling level, the gable-end being, therefore, devoted to a de-corative feature, formed of niches in which replicas of two 17th Century figures on the old school building will be placed. These niches, with their enclosing pilasters and enclose, with their enclosing pilasters and enclose. tablature, all executed in Grinshill sand-stone, surmount the foundation-stone laid by H.M. the King at his visit to Shrewsbury last year. Warming and ventuating the tors keep the temperature inside constant, but the reading-room has, in addition, a but the reading-room has, in addition, a large recessed fireplace, whose projecting stack forms so prominent a feature in the illustration. Moulded brick cappings, curved horns, weathered base and offsets, add interest to the work. Care has been taken, by keeping the joints of the stone quoins irregular, and by using, for the walling, a struck join, pressed in with the thumb, to give a soft surface texture to the building. The cost of the work will be approximately 25.500. The architects are Messrs, Forsyth and Maule, FF R.I.B.A. 309, Oxford Street, W., and the general contractor is Mr. Henry Price, Welsh Bridge, Shrewshare, The drawing here reproduced was bury. The drawing here reproduced was shown at the Royal Academy this year.

ST. MICHAEL'S CHURCH, MILL

ST. MICHAEL'S CHURCH. MHLL HILL. N.W.

This new church is to be elected on a site in Flower Lace, adjoining the Hartley Memorial Hill. boult by the same architect. The church will consist of nave 91 ft. long and 25 tt wide, aisles 30 tt by 14 ft. wide, chancel 40 ft. by 25 ft. morning chapel 39 ft. by 14 tt. organ aisles detgy and choir vestries, and suitable porches at entrances. There will be no charse by windows, but the aisles at dichatel will be 1 div and have timber architections of same health as the nave and charcel, and the ode windows will be large and kert but up so as to secure good lighted to the nave and that of the steep arcade. tribes not teen cave and connect and the tibles of hole dispellfulling it before proportions and richely moulded. It is intended to erect a toper at north west corner of maye.

next Flower Lane, as shown in the view. The window and other dressings externally will be of Weldon stone, the walls faced with will be of Weldon stene, the walls faced with red and purple bricks, relieved by stone bands and copings, and the roofs will be covered with red hand made tiles. The inside stonework will be of Bath stone. Accommodation will be provided for 750 persons. The architect is Mr. J. S. Alder, Licentiate R.I.B.A., of 1, Arundel Street, Strand, W.C.

### BILLIARD-ROOM, CROW CLUMP. WEYBRIDGE.

A v.ew of this house from the appeared in our issue for June 9 last, from the original shown at this year's Royal Academy. On July 10 last year the plans and ntrance side of the house were illustrated. entrance side of the house were illustrated. We now give a view of the billiard-room, with its ingle-nook and hooded fireplace. All the woodwork is in oak and other hard timber. Mr. W. G. Tarrant, of Byfleet, is the builder. and the architects are Messrs, Tubbs, Messer, and Poulter, of Craig's Court House, Charing Cross, S.W.

# THE MIDDLESEX COUNTY GUILDHALL BROAD SANCTUARY, WEST MINSTER, S.W.

To-day we give two interior photographs of this building. That to the left illustrates part of the root of the Council Chamber, and the other shows the throne and bench of the County Sessions Court No. 2. Two plans of this building appeared in the Building News of September 1, when interiors were published of the County Sessions Courts Nos. I and 2, together with a brief description of the building, which is erected on the detached site next the Westminster Hospital and facing the Houses of Parliament and Westminster Abbey. Messrs. J. S. Gibson, Skipwith, and Gordon, of Old Bond Street. W., are the architects. An exterior perspective appeared in our issue of February 3, 1911.

THE NEW OFFICES OF THE MUTUAL LIFE ASSURANCE COMPANY. WATERLOO, CANADA.
This handsome Canadian assurance office has been built at Waterloo, Ontario, from the designs of the Royal Gold Medallist of the R.I.B.A. for 1915. Mr. Frank Darling, F.R.I.B.A. (Messrs. Darling and Pearson). The building is monumental in character, and admirably adapted to its purpose. The photographs may be taken as typical of others, and representing Mr. Darling's style at its best. We hope shortly to publish two others of similar buildings erected in other parts of Canada by the same architect. The marble work was carried out by Messrs. P. Lyall and Sons, of Montreal. Messrs, Doulton and Co., of Lambeth, executed the terracotta of the great portal shown. The ornamental plastering was done by Mr. R. C. Dancy, of Toronto, Messrs, Jos. McCausland and Son, also of that city, were employed on the painting, while Messrs, J. S. Scott, of the same address, were entrusted with the woodwork.

HOUSE, HAMPSTEAD HEATH.

This house and chauffeur's cottage is erected on the high ground on the Hampstead Garden Suburb. The garden adjoins a large wood, and from the front the view is unin-terrupted over the Heath, for which reason the garden room was provided. The bricks the garden room was provided. externally are Chesham greys, with dressings in reds from the same kilns. The timber framing is in oak with trowelled plaster panels. The tiles to roof and tile hanging are red hand-nade sand-faced Bedfordshire tiles. The woodwork is painted white tiles. The woodwork is painted white throughout, except the motor house doors and front door, which are bright green. Gilbert C. Waterhouse is the architect.

The ender of Mr John Hunt, South Wharf, Covoland Road, Gosport, has been Gosport, has b Wharf, Cleveland Road, Gosport, has been accepted by the Admiralty for new block of buildings for the accommodation of the sick berth staff at Haslar Hospital, which is a gift from the Canadian balles to the Mother Country.

erected in the churchyard A cro-A cross is to be erected in the churchyard of SS Mary and John, Cowley, Oxon, as a memorial to the late Rev. R. M. Benson. The cross will be built from designs by Mr. J. M. Comper. It will stand about 21 ft. high, and at the top of it there will be a crucifix with figures of St. Mary and St. John on either side. The cost will be about £300.

### LEGAL INTELLIGENCE.

ADMIRALTY CONTRACT AT ROSYTH— QUESTION OF CROWN PREROGATIVE.— QUESTION OF CROWN PREROGATIVE—Judgment has been given by Lord Anderson in the Bill Chamber of the Scottish Court of Session at Edinburgh in a case the appellants in which were the Lords Commissioners of the Admiralty. They appealed against a deliverance given by William Dunlop, Glasgow, on the sequestrated estate of Andrew Plair, public works contractor, Glasgow. The Commissioners, in May, 1914, entered tito a contract with Mr. Blair for the execution of storage works at Royth at a cost of £7.031, and before the contract was completed the contract was the contract was completed the contractor was sequestrated. At the date of the sequestration of £2,771 19s. 10d., and had been paid £1,800.
The trustee declined to carry out the contract, and the Commissioners entered into a new contract with another contractor to complete the work for £6,280, making a total of £9,051

19. 10d., representing a total increase of tract with another contractor to complete the work for £6.280, making a total of £9.051 19s. 10d., representing a total increase of £2.020 19s. 10d., which, less the sum due to the contractor—£971 19s. 10d.—inade the net extra cost £1.049, which amount, the Commissioners claimed, was the damages they sustained through the failure of the contractor and the trustee of the equestrated estate to implement the contract. For this sum of £1.049 the appellants, as representing the Crown, claimed preferential ranking in the sequestration. The trustee admitted the claim to an ordinary ranking, but he rejected the claim is of ar as it was made to a preferential ranking. Lord Anderson has refused the apclaim in so far as it was made to a preferential ranking. Lord Anderson has refused the appeal, affirmed the deliverance of the trustee, and found the Crown liable in expenses. His Lordship said, in his judgment, that the apellants maintained their right to preferential treatment on the following grounds: That the Crown had an inherent right, by way of prerogative, to a preferential ranking; and that there was no provision in the recent Bankruptey Act of 1913 which abrogated or modified that prerogative of the Crown. Regarding the first point, the appellants founded, on a decision of Lord Cullen in the case of the Lord Advocate v. Galbraith, in which his Lordship held that the Postmaster-General was entitled to a preferential ranking in a sequestration for the amount of a telephone rent. His Lordship was unable to agree with Lord Cullen's reasoning. His Lordship took, that view because the principle. His Lordship took that view because the prinrus Lordship took that view because the principle was inequitable; the alleged prerogative was hostile to the general policy of the Bankruptcy Acts, which aimed at equal treatment of all creditors in the matter of the distribution of all creditors in the matter of the distribution of the estates of a bankrupt. But assuming that Lord Cullen's judgment was sound on the foregoing point, his Lordship was against the appellants on the second branch of their argument—that the provisions of the Bankruptey Act of 1913 had neither modified nor abrogated the alleged Crown privilege. He held that Section 118 of the Bankruptey Acts of 1915 implicitly abrogated any such alleged prerogative. In this result his Lordship was fortified by the consideration that his judgment determined that on this point the law of Scotland was the same as that of England.

A mission hall is about to be built at Blaen-avon in connection with St. Paul's Church. The architect is Mr. G. A. Treharne, of Aber-

In response to the special appeal for funds to meet the deficit of the Architectural Asso-ciation many fresh donations have been sent in, bringing the total receipts of the fund to a little over £310.

Mr. A. E. Brookes, the surveyor to the Darham County Council, has been instructed by the Government to act as engineer-in-chief in the construction of the whole of the new military roads on Salisbury Plain. Prior to going to Durham Mr. Brookes acted as sur-veyor to the Cornwall County Council.

A verdict of suicide while temporarily insane A verdict of shicide while temporarily hashe was returned at a Sunderland inquest on Thomas Henry Lackenby, a sculptor, who resided in an attic at 9, King Street, Sunderland. A sister of deceased said that for some time past he had been very depressed, and done very little work. He was found lying on the floor dead with a tube from the gas bracket between his lips. The gas had been turned on.

At a meeting of the Town Improvement and Streets Committee of Newcastle-on-Tyne Corporation on Wednesday the city engineer presented a report on a census of uninhabited premises taken on August 24, 25, and 26. The senten a report on a census of uninhabited premises taken on August 24, 25, and 26. The figures were:—Self-contained houses, 80; flats, 8; houses and shops combined, 11; doubtful if fit for habitation, 76; total 175. When the last census was taken, in May this year, the total was 193.

## Currente Calamo.

Now is the winter of our discontent, with competitions generally very unlikely to be made glorious summer by this sun of York, which shines as dubiously as old Sol himself through the autumnal morning mists, on the prospects of competitors in the town-planning scheme that the city is about to engage in. No one knows who the assessor is to be, or if an architect is to assist him. For £175-the amount of the three premiums-the corporation demands the right to use all or any of the designs thus appropriated. The work asked for is very considerable, and of the kind that demands much time and brings little fame, and the hundred pounds offered is preposterously inadequate. The time fixed for delivery of the designs is insufficient. Unless the conditions-for which, by the way, every competitor has to deposit ten guineasare materially amended, competitors are not likely to get fairly treated, and the city of York is almost certain not to get a scheme worth carrying out.

Of all the addresses at the British Association meeting last week, we think that of Prof. H. S. Hele-Shaw, which we give elsewhere, was the most timely just now. It is useless to ignore the fact-we of the engineering and building trades know it already too well-that when the war is over the labour problem will demand solution with an urgency more terrible than that of the Sphinx of old. It is hopeless, as Prof. Hele-Shaw says, to expect the machinery of our industrial system ever to work well again while the interdependent parts are not arranged, and never can be arranged till we change them radically with respect to the whole. The canker which is eating the heart out of our industrial life is due to a wrong mental attitude. It is no use blaming either side. There are employers and companies as deaf to the rightful claims of the men and boys they exploit as there are shameless departures from fair hargains with honourable employers by men who have thrown over their own leaders the moment it seemed to serve their interests to do so, without a thought of their duty to the community as a whole. We know why this is! The politicians have pandered to the selfish interests of those who could finance parties on the one hand, and to those of the masses who have the vote on the other; and we who have let them are pursued deservedly by a Nemesis we cannot escape unless we insist that truth shall be told, at whatever cost and however sternly, to Labour and Capital alike.

An appeal involving a claim to a Crown prerogative has been decided at Edinburgh by Lord Anderson. The case arose out of an Admiralty contract at Rosyth, Before the contract was completed the contractor's estates were sequestrated, and his trustee declined to carry on the contract. The Admiralty employed another contractor to finish the contract at an extra cost of £1.049, and for that sum they claimed a preferential ranking on the contractor's sequestrated estates. The trustee admitted the claim to in ordinary ranking, but rejected it in so far is made for a preferential ranking.-Lord Anderson refused the Admiralty's appeal. and sustained the trustee's deliverance. The ppellants were found liable in costs. His ordship said that it was part of the common aw of England that the Crown possessed that rerogative which might be asserted in the

distribution of a sequestrated estate. That was also the law of Ireland. It was contended that the doctrine of Crown prerogative as applicable to all kinds of debts had been introduced into the law of Scotland by the Act of Queen Anne. His Lordship did not agree with that contention, but in any event he held that the Bankruptcy Act, 1913, impliedly abrogated any such alleged prerogative.

While our own Local Covernment Board is cold-shouldering building in all directions Germany, according to an American correspondent quoted by the Literary Digest in the last issue to hand, is making a national matter of it. Even the news of the new Lille-Warsaw express, making in 30 hours the trip from front to front, is somewhat overshadowed by the report that the city fathers of Berlin have just authorised an issue of bonds to the amount of \$75,000,000, to be spent upon public improvements throughout the city, such as new subways, parks, new schools, and play-grounds. Incredible as this seems, at a time when many Germans are declaring their country to be fighting with its back against the wall, and to be the desperate victim of a conspiracy to starve, stifle, and crush its peaceful non-combatants into submission, we are given the definite testimony of the Lord Mayor of Berlin in corroboration as follows:--"At the beginning of August, immediately after the outbreak of war, things looked quite different. It was as if the whole business organisation, so to speak, held its breath. But that was merely a momentary pause. Then all at once we got our bearings and adapted ourselves to the new conditions. And in a few weeks the whole social organism, public and private, was again in full working order. In the first few days the number of unemployed rose from 20,000 to 60,000, a fact that clearly indicates the confusion that at first was prevalent."

That, we are assured, is the practical working out of the German principle—to keep on working at everything as in time of peace. Berlin is bailding two large underground lines which are to be under municipal control. In addition to these building operations within the town, there are others beyond the real area of the city itself. The new western harbour of Berlin is a gigantic undertaking of this nature. It is now almost complete. The larger part of the project, which has cost 40,000,000 marks, has been completed since the war. This harbour is intended to take up the immense smiffic created by the Berlin-Stettin Canal. This is the so-called Great Ship Canal, which will make the city of Berlin, as it were, a Baltic port. A not less important building is the great market-hall in the north-west quarter, which will be the largest hall in the world, and will cost 25,000,000 marks.

The claim of the Commissioners of Inland Revenue for increment value duty to the amount of £45 is still being pressed, unfairly and hardly we think. The claim against Mrs. Walker is based, as readers will remember, on the interpretation of the Increment Value Duty sections of the F names (1909 10) Act. 1910, as interpreted by the White Paper instructions, and as, in effect, upheld by the House of Lords in the Lumsden case, namely, that Increment Value Duty is collectable that Increment Value Duty is confectable where the property has been sold for more than it is worth at the time, in the opinion of the value of the

been not the value of the mand a concas a latted to be . 1. theoretic diction of the predges of Mr. L. yd George and the Law Officers of the Creek when the Bill was before the House, corresponding of the country at the General Election which followed the reject in of the original Bill by the House of Lords, and opposed to the intentions of the Parliament which ultimately passed the A. This was fully recognised by the late Good need, and remedial legislation was promised on a ago. In June, 1913, in reply to a question put by Mr. Royds as to the deav in hearing the Lumsden case, the then Attorney Genera, Sir Rufus Isaacs, stated that the matter involved in the appeal, that is to say, this question of the levy of Increment Duty when there was no rise in the value of the site, would be discussed in Committee on the Revenue Bill, to be introduced later in the Session, "and," he added, "the result of the discussion might render it univeressary to proceed further with the appeal." The Government, realising that the country was 100 behind them in this attempt to levy duty out of builders' and other occasional profits, had evidently determined to remedy the injustice by a clause in the Revenue Ball. In due comse the Bill was introduced, and it contained a clause providing a partial remedy. After some negotiation the Chamellor of the Exchequer agreed to a clause which provided, in effect, that in the case of property which consisted of land with a building or buildings upon it, no Increment Duty would be chargeable unless there was in fact a rise in the value of the bare land. The B.I. was withdrawn owing to a contentious clause affecting agricultural land site-value deductions.

Mr. Lloyd George promised to re-introduce it early last year. Nothing was done, and meanwhile the Lumsden case got to the Lords, and there opinion being equally divided the Crown got a judgment. On July 23, 1914, Mr. Asquith, in reply to Mr. Chamberlain, stated that the Government was prepared to introduce and pass that Session a one clause Bill giving the promised relief to those who were affected by the Lumsden decision, including, surely it must have been meant, Mr. Lumsden hamself, the most notable sufferer, and other victums, such as Mrs. Walker. Nothing was done, but Mr. Lloyd George gave his personal pledge on behalf of the Commissioners of Inland Revenue that no further claims of a similar character would be made. In space of this the Revenue Department brought Mrs. Walker before the House of Lords, and obtained a judgment against her practically similar to that of Lumsden's-thus on the strength of the judgment in Lunsten, ty which the House of Lords was bound, ove. ruling the judgment which Mes. Welker laid obtained in her favour against the Crown in the Valuation Appeal Court in Edinburgh. It was admitted in the Lords that and Mrs. Walker's case come first, and had the court been as equally divided about that as they were about Lumsden's, judgment in its lave been given for Mrs. Walker. Yet, it spite of al. this the Commissions of head Revenue are still pressing a wider for their pound of flesh! ----

The Royal Institute of the Ar atoms of Ireand have awakened to their respects outly in regard to questions pertaining to the amount monuments of Ireland, and have given practical effect thereto by appointing a small sub-commit-

### MONUMENTS. V.E. ALITHIA

I, suggests a megalathic monuments . . i. is. on which Professor G. Elliot Smith or and a del ite at the British Assoatom's receting in Dundee in 1912, was resumed ast beek at Manchester in an address thich the gave on the influence of ancient happy a cavisation on the world's culture. The thisses which he submitted were that the ssential elements of the ancient civilisations of India, Further Asia, the Malay Archi-Jelago, Oceania, and America were brought the necession to each of these places by marmers. Nose Oriental migrations on an Ate sive some began as trading intercourse between the Eastern Mediterranean and between the fastern Meinterranean and lucturescent tine about 800 mer, and continued in reverse centuries; that the highly complex and artimum culture which they spread Carner than the twenty first Dynasty, but included many important accretions and modifications from the Phoenician world cound the Eastern Mediterranean, from East Atrica and the Sudan), Arabia, and Baby-ma: that, in addition to providing the cavely which stimulated the development of the pre-Aryan civilisation of India, the cultural stream to Burma, Indonesia, the castern at rad of As.i. and Oceania was in turn modified by Indian influences; and that, his cay, the stream, with many additions from Ir donesta. Melanesia, and Polynesia, as well as from China and Japan, continued for many conturies to play upon the Pacific littoral of America, where it was responsible for plantig the germs of the remarkable pre-Columnan civilisation.

The reality of these migrations and the sized of culture was substantiated and dated by the remarkable collection of extraordinary practices and tantastic beliefs which the antient mariners distributed along a well-nomiel route from the Eastern Mediterranean to America. He submitted that these were responsible for stimulating the inhabitants of the coast dongs great part of their extensive itherary to adopt munimineation, to build a great variety of megalithic monuments, to make thele, to worship the sun, to adopt tattooling, massage, and other practices, to practhe verying liner, and the use of precious stars and metass, to adopt definite metal-agoral methods, as well as mining, and the in goal methods, as well as mining, and the use of intensive agriculture, associated with a tracel registion, to adopt certain phallic this and practices, to use the swastika symmetric formed in the heavenly twins." To practise that is, and to display a special aptitude for a lessificant daring in maritime adventures, as well as to adopt a number of curiously wherever features in host-darildant.

arbitrary features in boat-building.

Mr. W. J. Perry, in a contribution to the discussion of the disc discuss, the cited a series of facts which, he held, perited to the conclusion that the search the erten forms of material wealth fed the arress of the megalithic culture to those uses where they were to be found, and the treserve in absence of the desired form of reath determined that of megalithm influ-

### ---THE LOGISCHOOL OF BUILDING AT BRIXTON.

W. Char, several times drawn attention to We have several times grawn attention to the 2-1 mode that is being done at the L. C. C. S. F. Cof Building at Ferndale Road. But to and Lagain remind readers that there is a beauty in which a boy can better start to be a research of a his lite's work than the several transfer of the lite is work than the several transfer of the lite is work than the several transfer of the lite is work than the several transfer of the lite is work than the several transfer of the lite is the lite is the several transfer of the several transfer of the lite is the lite is the sever at the statistics, which, thanks to the government to Lendan Council, is the relation of the state of an entropy of and and entropy of and and it is sent easily a commodate a hundred ridge all boys.

Davies Bichter, decoration is similarly inculcated; and colour is likewise dealt with by Mr. A. R. H. Jackson, A R C.A.; and other leading members of the staff are Mr. H. F. Murrell, A.R.I.B.A., Mr. G. P. Denham, A.R.C.A., and Mr. Allan Graham, ARIBA.

Theory is well seconded by practice in the shops, in which the boys carry out practical work in their chosen trades. Our contemporary the *Decorator*, in its August issue, gives an extremely interesting account of a recent visit to the school, when Mr. C. E. Wilkinson, the president of the London Association of Master Decorators, conducted a representative body of members over the building, and indicated more especially the trend and scope of the curriculum for boys who have chosen to become decorators. first year's work includes Building Construction, workshop practice, the study of materials, workshop arithmetic and mathematics. experimental mechanics, geometrical plane drawing and lettering, freehand drawing or building details, and other studies of contemporary history and literature bearing on the arts.

The excellent illustrations of the lads actually at work given by the *Decorator*, and the details of pilaster decoration and other examples, are very interesting. At the present time one of the larger rooms is being wholly decorated by the students from a simple design, and the decoration of the whole of the upper floor by the boys is to follow.

### OBITUARY.

We regrot to record the death of Mr. Wilham Henry Lynn, of Belfast, which occurred on Sunday last, at the age of 86. Mr. Wil-ham Henry Lynn was President of the Royal Institute of Architects of Ireland from 1886-9. He was the architect of Chester Town Hall. with the adjacent market front; the Clark Halls, with the bridge adjoining them, at Paisley; new municipal buildings at Barrowin-Furness, and the public library buildings at Beliast. These were mostly won in comat Beliast. These were mostly won in com-petition. In 1861 he was awarded the first premium for the Houses of Parliament and Covernment offices at Sydney, New South Wales. He was placed second in the Ply-mouth Gundhall competition, and he took the third premium in the competition for the Glasgow municipal buildings. His design for the Birmingham new buildings to be connected with the town hall was disqualified owing to a technical point, but his scheme was acknowledged as by far the best submitted. As partner of the late Sir Charles Lanyon up to 1872, he carried out a great many public buildings in Ireland, including the Queen's University of Belfast, for which institution he has only just lately carried out extensive additions won in competition as recently as 1910, when (October 14) we illustrated his plans for this considerable undertaking. The whole of the drawings for the work were made by himself personally unaided, a remarkable feat for one so ad vanced in years. Lord Dufferin invited Mr. Lynn to advise on vast contemplated inprovements in Quebec, and amongst other xorks a V ceregal residence (a new chateau. St. Louis) for the Governor-General of Canada, to be erected in the citadel. Mr Lyon was joint are need for the new cathedral at Belius; with the late S.r. Thomas Drew, R.H.A., but subsequently be arranged o that his finer I and partner in this under d ng should every on the work alone, and a was done. We give a purtrait of the this was done. We give a portrait of the invised in our issue for January 17, 1894. For many years Mr. Lynn was an active member of the Architectural Association Excessors. He was an exceedingly espablished because or are a water of the nearly and extrem by and most deservedly popular with a Disconfrares

One of the oldest practising architects in V toria or, probably, in Australia—Wr. John James Clark, diel at the residence of business that the lessons that the son stands of the first developed to bus son. St. K.lda, Melbourne, on June 25, 1 hakit 2 full sets of drawings of the age of seventy seven, after a combinate and freehand drawing burned at the Melbourne General Cemetery taight by Mr. Herbert, in the following day, the Council and mem-

b rs of the Royal Victorian Institute of Architects being present at the funeral. Mr., Clark was born in Liverpool in 1838, and was educated at the Collegiate Institute in that city. Sailing for Australia in the Martin Luther, he arrived in Melbourne in 1851, the following year, at the age of thirteen, entering the Public Works Department. After serving for five years, he visited Europe to study its public buildings. On his return, in 1858, he was appointed officer-in-charge of the Treasury Buildings, Collins Street, Melbourne, which he resigned at the age of twenty-one. Between 1861 and 1878 was a period of great activity in the Public Works Department, and Mr. Clark was concerned with the designing and carrying out of many of the large State buildings, amongst which were the Government Printing Office. Customs House, Public Offices, Bendigo, the Mint Administrative Offices, Government House, various asylums and gaols, whilst he detailed and was in charge of Messrs. Smith and Johnson's design for the Melbourne Law Courts, concluding this last work seventeen months after retiring from the Government, with compensation, at the age of forty. From 1879 to 1881 Mr. Clark practised privately in Melbourne, in which latter year he joined his brother in partnership in Sydney. The firm was successful in carrying off prizes for town halls, the principal of which was the Brisbane Town Hall. In 1883 he was appointed Government architect for Queensland, the principal work being the supervision of the public offices (now known as the Treasury Buildings), for which building his firm had previously been awarded second prize in a public competition. In 1886 he resumed private practice in Brisbane, and three years later, with his son, took a nine months trip through America, Great Britain, and Europe. In 1896 he went into the Public Works Department, West Australia, hospital and asylum work being entrusted to him. Retiring from this service, his son joined him in partnership, and the firm practised in Perth till 1899, when they returned to Brisbane three years, afterwards resuming practice in Melbourne. The works carried out were mainly won in competition—viz., City Baths (Melbourne), Maitland Hospital (X.S.W.). National Mutual Buildings (Ballarat), Carlton Refuge, Women's Hospital (Melbourne). Auckland (N.Z.) Town Hall, Mr. Clark was appointed architect to carry out the Mel-bourne Hospital, his design having been placed second in a previously-conducted com-petition. This work—his last—is about nearing completion. Mr. Clark was very successful in competitive work. Out of 47 competitions entered, he won 24 first, 12 second, and 2 third places, a total of 38 scores out of 47 He was a skilled landscape artist in entries water colours, having studied under Buvelot, and from 1877 to 1889 he was as much absorbed in this branch of art as in architecture itself. Some years ago he was elected a Fellow of the Royal Victorian Institute of Architects, and for some time occupied a seat on the Council, being appointed Vice-President for a number of years.

Mr. George Lister Sutcliffe, F.R.I.B.A., formerly of Heptonstall. Leeds, died on Sundry at 25, Cannon Place, Hampstead, in his 51st year. He joined the Royal Institute of British Architects as an Associate in 1891, becoming a Fellow twenty years later. becoming a Fellow twenty years later. The funeral service will take place at Rosslyn Hill Chapel, Hampstead, to-morrow (Thursday), at noon.

Lieutenant George Leonard Cheesman, the 10th Hampshire Regiment, who was killed in Gallipoli on August 10, aged 31, since 1908 a Lecturer in Ancient History at Oxford University. Mr. Cheesman took a warm interest in the Roman Wall, and also in the excavations of Roman remains at Corbridge and elsewhere, and in the elucidation of ancient Roman inscriptions. He was 8 member of the Council of the Society for the Promotion of Reman Studies.

\_>----The "Premier Mitm." by M Egale Rombaux, which was purchased by subscription for the nation, and was illustrated in our pages on the 1st inst., is now placed on exhibition in the Tate Gallery, Millbank.

## Building Intelligence.

ENGLEFIELD GREEN.—Princess Chris ENGLER IELD GIGLEN.—Frincess Christian opened on Saturday and handed over to the War Office the new military hospital which has been erected on the outskirts of Windsor Great Park at Englefield Green, providing accommodation for 120 patients. general construction has followed the lines of the Red Cross Hospital at Netley. The floor of each ward is extended 8 it. beyond the front wall, so that through doors in the centre the beds can be wheeled out and, it desired, left there during fine weather under a covering of striped cauvas stretched across two steel poles. The six pavilions, each containing twenty beds, are planned in a semi-circle facing the south. Belind these are arranged twenty-two other buildings for the staff and general administration.

GARLICKHITHE, E.C.-The Lord Mayor and the Sheriffs attended in state on Sunday morning at the reopening, after restoration, of St. James's Church, Garlickhithe. The building is one of the old riverside churches near Mansion House Station, which was consumed, as an inscription states, "by the late dreadful conflagration, A.D. 1666," and was rebuilt by Wren between 1676 and 1683. The elegant stone lantern of the tower, which projects from the centre of the west front, forming a porch, is known as "Wren's Lantern." Richard Steele was sometimes a worshipper at the church, and his impressions are recorded in the Spectator. One of the cluef objects of interest in the church is the altar-piece, a picture of "The Ascension," by Andrew Geddes, which has been cleansed and restored.

HULL.-A colony of 120 rest homes erected in the western suburb of Hull out of a legacy of £200,000 left by Dr. Lee, was opened on Friday. Apart from the cost of the site and buildings over £100,000 will remain to endow the homes. The homes are built on a site of 6½ acres, with frontages to the Anlaby Road and Pickering Road. The blocks are arranged in a quadrangle, and each block contains accommodation for eight inmates, four upon the ground floor and four upon the first floor. Upon the south side of the site stands conspicuous a central block, which contains a general room 50 ft. by 25 ft., panelled in oak and furnished. This is to be used as a reading-room and a library. In this block is also provided the board-room, a room for the medical man, and a room set out exactly as the dming-room of the late Dr. Lee, in Pryme Street.

Mr. G. Spur, an assistant surveyor at Ponte-act, has been appointed to succeed Mr. G. L. Dallow as surveyor to the Halesowen Rural District Council,

A new Congregational church at Highroadwell, Halifax, built at a cost of £3,700, has been formally opened. Messrs, Glendinning and Hanson, of Albany Chambers, Halifax. were the architects.

A Baptist school chapel has been opened at Hawksbridge, Oxenhope, Yorks. The architect was Mr. Herbert E. Illingworth. A.R.I.B.A., East Parade, Leeds, and the outlay has been £2,100.

The Maghull Epileptic Homes Committee have decided to add a fresh building at a cost of £15.000 to adjoin the Henry Cox Home in Smithy Lane, Maghull and plans have been passed by the Maghull Parochial Committee.

Mr. R. Barry Parker, F.R.I.B.A., the consulting architect to the First Garden City. Limited, has left Letchworth for a few weeks for Portugal, having been called upon to advise the municipality of Oporto upon a town planning scheme for that city.

Last Saturday the Dewar Memorial drinking fountain, erected by subscriptions in the Abercorn Gardens, Portobello, was unveiled in memory of Dr. Dewar. The structure is 14 ft. high, and has been carried out in grey Aberdeen granite, with a bronze portrait of the famous doctor on one side of the body of the monument which is suprounted by a pediment tamous doctor on one side of the body of the monument, which is surmounted by a pediment standing on balls at the corners. The inscription occurs in a similar panel on the other face, the fountains being at either end. The design was chosen in open competition from 100 proposals submitted. The sculptor is Mr. T. Currie Bell, Synod Hall, Edinburgh. rdes. .00 pro-Mr. T. schen. growt

## WATER SUPPLY AND SANITARY MATTERS.

GLASGOW WATER EXTENSION SCHEME It in sometiments of a the Gas-20W Controlation is the Parliamentary Bills Committee that in a smeather with the proposed Corporation Water Order where provides and the inclusion of the River Turk in the Lich Katturn mayor amounts. Corporation Wate. Only whose provides anothe inclusion of the River Turk in the Lech Katime water area as amounted have to a made whereby the Ear, of Meray is to receive £5,25% and the Crown authorities £2.2% in full of their claims at the Royal Forest of Glen Finlas. A report on the scheme states that a supery of at least 10% of gallons daily, over and above compensation water, will resolutioned, and for this quantity the estimated cost of the works is medicate. The Corporation scares in perpetuity the entire solution of the new lake, extrading to over 40 acres, and a belt of land round the ake for present and future requirements. In the compensation to be poid [viz. £32.56] is embraced the ground for dain, reservoir, lond u.g., wayleaves, servetades, temporary as of land for railway and sidings, and all claims a injectent to the proprietor for disturbance of game, best of shootings, and interference with remaining lands, as also the claim of the Crown for interference with the Royal Freest of Glen Finlas. The compensation is not payable until Whitsunday, 1917.

THE WATER SUPPLY OF LONDON. The twelfth animal report of the Metropolitan Water Board, just issued, shows that the funded debt on April 1 last amounted to £48.84e,892 with £1.4c2.952 of interest, and in addition animities and rent charges amounting to £7.90%, or a total of £1.477.552 equivalent to £7.90%, for the sand gallons supplied. The net water reintal received by the Board during 1914-15 was approximately £2.953.40%, or an increase of £22.090. The percentage of collection for the half-year ended March 31 last in respect of domestic supplies and fixed charges was 94.4, being the same as for the corresponding period last year. The audit of the Board's accounts for the year ended March 31, 1914, showed a certified deherency of £15,365 a against an estimated deficiency of nearly £105,000. This satisfactory position was attributable to the fact that the income exceeded the estimates by about 70,000, due to the favourable conditions of the summer of 1913 to a further reduction in allowataces for empty premises, and to savings under the head of immpring and distribution charges. The Board's staff numbers 923 efficers uncluding 53 woment. THE WATER SUPPLY OF LONDON. ing and distribution charges. The Board's staff numbers 923 officers uncluding 58 women. 3.189 workmen and others on weekly wages, and 116 service staff on weekly wages, or a total of 4.223, with an aggregate salary list of total of 4,228, with an aggregate salary list of £173,943. The board's supply (direct and in bulk to adjacent undertakings) during 1914 was bulk to adjacent undertakings) during 1914 was 89,420 million gallons of water, or a daily average of 245 million gallons. The grand total volume is equivalent to 399.2 million tons of water. The Thames furnished 58.5 per cent, the Lee 23 1 per cent, and the wells, etc., 18.4 per cent, of this total. The total estimated population supplied by the Board at the close of last year was 6.744.247.

### TRADE NOTES.

Boyle's latest patent, "Air-Pump" ventila-tor, has been applied to Naas Presbyterian Church, Ireland.

Church, Ireland.

The cult of fresh air is gradually extending to bathing. It is interesting to know that an open-air swimning bath has recently been constructed in Lister Park, Bradford, The cement flat roofs over the dressing-rooms have been made wet-repellent by the waterpreading powder Pudlo.

The death is announced of Mr. David Walter Hemberson, builder, Quarrypark, Ecclefichan, Mr. Henderson carried out many large building contracts in the South of Scotland.

Mr. Henderson carried out many large building contracts in the South of Scotland.

At Oadby, near Largester, Mr. A. W. Brightman, an inspect a under the Local Gevernment Board, has held an impury into an application by the arban district council for sanction to horrow £4,000 for the sewering of the Wagston Road district and the extension of the wags disposal works. It was stated that the processal works. It was stated that the processal works. It was stated that the processal works is the disposal of sewage disposal works. It was stated that the processal works for the disposal of sewage by lated arragation had proved quite of sewage by lated arragation had proved quite mismfalle. A scheme has been prepared by Mr. W. Boll, the council's surveyor, and Mr. E. G. Marshey, M. Inst. C. E., the horough engineer of the ester acting as consulting engineer of the ester acting as consulting engineer to deal with the sewage by means of perfociating fixers and the council had unamended approved to the preparing the scheme attention of the disc.

Syria, and Arabia.

Mr. J. Landfear Lucas inquires as to the Mr. J. Landfear Lucas inquires as to the present whereabouts of a well-known carved stone which was embedded in the front of 52. Newgate Street until these premises were pulled flown in 1863. The stone is mentioned in the "Survey of London and Middlesex." Vol. III. Pt. I «Nightingale. 1815]: by John W. Archer, 1851. in "Vestiges of 0.5d London": and in "The History of Signboards," by Larwood and Hotten, 1866. The two last named authors give an illustration. The carving represents Adam and Eve. with the date 1669, and initials at the top of the stone "18." Eve initials at the top of the stone \*\* 1.8.1 is shown handing an apple to Adam, and a tree, round the stem of which the serpent tree, round the stem of which the serpent is winding, occupies the centre. A writer in "Notes and Queries" has made inquiries at the Guildhall and British Museums without result. The carving exactly tallies with the arms of the Fruiterers Company, and it is suggested that the premises may have been the property of the company, since it was the custom to mark houses, are with tennels mark houses, etc., with panels showing the owner's arms

The Board of Education intimates that the Regulations and Syllabuses which governed Examinations in Science and Technology held in 1915 will continue in force for 1916 In the prefatory note to the volume of Regu-lations and Syllabuses for Examinations in Science and Technology, 1915, the Board announced their intention to discontinue those examinations at a date to be subsequently announted. The Board now desire to give notice that after 1916 they will no longer hold Lower General Examinations in any subjects of science and technology. The Hig-General Examinations will for the present continued. The conditions governing the award of scholarships, exhibitions, etc., in science in 1917 will be announced in due course. The time-tables of the examinations to be held in 1916 will be issued shortly.

The Calendar of the Royal Technical Col-The Calendar of the Royal Fechical College. Glasgow, handsom ly bound in purple, with a perspective of the new college buildings, erected at a cost of £400,000, from the designs of Mr. David Barclay, F.R.I.B.A., of St. Vincent Street. Barclay, F.R.I.B.A., of St. Vincent Street, Glasgow, as a frontispiece, has just been published. The 120th session of the college will open on Tuesday, the 28th inst. The School of Architecture is under the superintendence of a Joint Committee on Architecture, representatives of the college, and of the Glasgow School of Art. The Glasgow Institute of Architects have been consulted regarding the consultation of office automatic with the Senior of Architects have been consulted regarding the correlation of office apprenticeship with the course of study provided by the School of Architecture, and the Council of the Institute have expressed their concurrence in, and issued to the members a recommendation in favour of the alternative schemes of study arranged, under which attendence at the School of Architecture is combined with the service of an office apprenticeship. The work of the School prepares for, and exempts from part of the Final Examination of the RIBA. The courses of study provided by the Glasgow School of Architecture are given in both the Reyal Technical College and the School of Architecture are given in both the Reyal Technical College and the School of Architecture are given in both the Reyal Technical College and the School of Architecture are given in both the Reyal Technical College and the School of Architecture are given in both the Reyal Technical College and the School of Architecture are given in both the Reyal Technical College and the School of Architecture are given in both the Reyal Technical College and the School of Architecture are given in both the Reyal Technical College and the School of Architecture are given in both the Reyal Technical College and the School of Architecture are given in the School of Arch as is to a Diploma, and is the normal course eass to a Portoma, and is the normal course for lay stolents. A restricted portion of the same, called the Certificate course, altitude of lesser requirement and arranged for stolents who cannot give the time required for the Diploma course, will yet pro-

vide a fairly sufficient education. The whole Certificate course qualifies for the Semor Cer tificate; the jumor division of this course, for a Jumor certificate. The fees are: Full day, ten guineas per annum; half-day, five guineas per annum; evening classes, two guineas per annum. A Diploma course in Bailding, extending over three sessions, has Barlding, extending over three sessions, has been instituted at the College, with the object of providing for students a thorough know

THE BUILDING NEWS: No. 3167.

ledge of Building Construction.

The directors of the University of Penn-sylvama Museum announce that Dr. Clarence Fisher, Curator of the Egyptian Section the Museum and the leader of the Eckley B Coxe, jun., expedition to Europe, has un-cartified a great temple at Memphis, Egypt. The temple, it is estimated, is of the period of Rameses II., and was erected more than of fameses 11., and was erected more than 3.000 years ago. While no definite data can be given out at this time. Egyptologists are inclined to believe that the temple is one that was built by Seti I., and that it is the one-described by Herodotus.

The annual report of the Newcastle-on Tyne City Engineer, Mr. W. J. Steele, for the year ended March 31, 1915, states that the estimated population of the city is 271.525, and the number of inhabited houses and flats 50.943. The number of dwellings erected during the year (each flat being counted as a separate dwelling) has been 163. compared with 111 in the previous year, which was the lowest recorded since 1882. The number of unoccupied premises of a habitable nature has further declined. In February, 1914, there were 336, and in February, 1915, there was only 152, which is about \(\frac{1}{4}\) of I per cent, of the total number of houses in the city. The estimated cost of new buildings for which plans were approved during the year was £396,392, comproved during the year was £ pared with £491.373 in 1914. In twenty four streets the carriageway was resurfaced with tar macadam, the total area laid being 34,728 square yards. The approximate total length of highway now maintained is 254 miles, the cost of maintenance per mile being about £128. The house refuse amounted to 94,561 tons, and is equivalent to 6.96 cwt. per head of the population, or 37,12 cwts. per house, the cost of collection and disposal being 22.03d. per head of the population, or 9s. 9.41d. per house. The street refuse amounted to 42.128 tons, and is equivalent to an average of 166 tons per mile of highway cleansed. In the Ouseburn Valley 72,514 loads of material were deposited in the embark-ment forming Road No. 2 under the Cor-poration Act, 1904, and its vicinity: 27,852 oads were deposited by the corporation and 14 662 loads by private individuals. The 44.662 loads by private individuals. The total quantity deposited during the previous year was 51,403 loads.

For those who contemplate a change residence the "Homestead." issued by the Great Central Railway for the special purpose of enabling house-seekers at once to decide how far they can live out of town, will be found most useful, as not only are the season ticket rates given, but a full description of each place is included, also useful local data such as rates in the pound, water, cost of gas, population, altitude, subsoil, etc., is also stated. Special articles are contributed by well-known authorities on "Where Shall We Live, and Why?" "Golf and the Choice of a Home," and "The Homestead Country: Its Literary and Historical Associations." The book is profusely illustrated, and produced in quite a superior style. Copies can be obtained free on application to the G.C.R. Publicity Office, 216. Marylebone Road Publicity Offi London, N.W.

The Michigan State law regulating the practice of architecture came into operation on August 24. The usual restrictions for the practice of architecture are enacted, and further it is permitted that any builder may draw plans for himself, or for any building that is being erected under his supervision Architects who have practised prior to February 5, 1915, who can show satisfactory evidence of character and competency, can obtain a licence on application.

The County Council of Surrey have granted the surveyor, Mr. A. Dryland, two months leave of absence to recuperate after sowere

At Wembley, yesterday (Tuesday), Mr. A. W. Brightmore, of the Local Government Board, held an inquiry into an application from the urban district council for power to borrow £12.071 for the extension of the sewage disposal works.

The cost of the conversion of the grand stand The cost of the conversion of the grand stand on the racecourse at Blackpool into a temporary hospital is estimated at £25,000, and will be borne entirely by the War Office, the Blackpool Corporation's contribution being the preparation of the plans, the letting of the contracts, and the supervision of the work.

Messrs. Kerner-Greenwood and Co. have sent us a chart showing important tests made by the Japanese Imperial Government. They experi-Japanese Imperial Government. papanese imperial Government. They experi-mented with several waterproofers, and it was proved that "Pudlo" gave the best results against percolation. Further, the test with neat cement (not waterproofed) and a mixture of three parts of sand to one part of pudloed cement proved the latter to be much more extensively then next convent, the exact features cement proved the latter to be much more waterproof than neat cement, the exact figures being an absorption of 21 monmes against 23 monmes of water. The chart will be sent to any applicant, together with the last of the series issue of "The Charm of Lynn," the business side of which deals principally with drainage work. Address Messrs, Kerner-Greenwood wall Co. Aprils Sengre King's Lynn. age work. Address Messrs. Kerner-Cand Co., Ann's Square, King's Lynn.

### RIBCHESTER MUSEUM OF ANTI-QUITIES.

In the North Lancashire village of Rib-chester on Friday Dr. Haverfield declared open the newly built museum of Roman antiquities, in which are now placed some of the later relies found at this old Roman station. The museum has been placed under the guardianship of the National Trust. A numerous party of members of the British Association in attendance at the Manchester Association in attendance at the Manchester meeting were present, many having motored over the twelve miles from Preston. Str Frank Forbes Adam, chairman of the council of Manchester University, presided. Dr. Haverfield said that at Ribebester they had the temping of a Popular fortunally and the remains of a Roman fort such as was called a castellum. It was by the castella that the Romans held disturbed areas, especially on frontiers. Britain was an unquiet area, and from Chester to Carlisle, from the Velocity Velocity Carlisle. the Vale of York to Tyneside, so far as the hills went, forts were placed at strategic opints, joined by a network of roads. Some of these forts were along the Roman Wail. A few were north of it many guarded the land south of it. They were all much the same-square or oblong in outline, three to six acres in area. They were purely mili-tary. Strategically, the use of these forts rested on the assumption that the enemies of the Empire would only attack in small bodies and that under the then conditions the attack was weaker than the defence. In the end the system broke down. The enemy arrived in hordes, the isolated forts fell one by one, and the frontiers had to be set back. Of such forts North Britain contained perhaps fifty or sixty, not necessarily all in use at once. Faint vestiges of one still stubbornly survived in a corner of Manchester; another, larger and more important, was there in Ribchester. It guarded a crossing of the Ribble from north to south. It guarded also the entrance to the Ribble estuary, and the passage up the valley inland, and the low hills which one could penetrate the Pennine range from Blackburn to Todmorden, to Skipton, to Ribblehead—all three easy passages. It was built possibly by Agricola, but more probably, Dr. Haverfield thought, four or five years before Agricola came to Britain, and it was held, with various reconstructions, till the very end of the Roman period. It was large and strong, but little was left of it now; one large piece, indeed, had been washed bodily out by the Ribble. In a field just west of the churchyard a grass-grown bank and mound marked its former western limit. Here some useful exeavations were made twenty years ago by Professor Gar-stang. More lately Miss Greenall, in building her house, discovered parts of the headquarters building, right in the centre of the fort, and coerced her architect into preserving them in situ, and encouraged excavation. Professor Anderson, of Manchester, and Mr. Donald Atkinson had been able recently to recover the plan of the headquarters building nearly whole There was a little more to do some day.

The urban district council of Cleator Moor have obtained the consent of the Local Government Board to the borrowing of £7,000 for the purchase of land and the erection of working-class dwellings under the Housing of the Working Classes Act.

An equestrian statue of Dick King, who saved Natel by his famous 600 miles ride from Durban to Grahamstown, when the former town was besieged by the Boers in May, 1842, was unveiled on August 14 on the Esplanade at Durban by the Mayor.

On the occasion of his retirement from the Bucks County Asylum service, Mr. Edwin Field, the engineer and clerk of works, has been presented by the members of the Visiting Committee, present and past, and the officers and staff of the asylum, at Stone, near Aylesbury, with a purse of gold and a barometer.

During some excavations at Minster, in the Isle of Sheppey, a Roman coin was found, which has been identified at the British Museum as a coin of Hadrian, who was Emperor from A.D. 117 to A.D. 138, and built the wall extending from the Solway to the Type. There is proof of the Roman occupation of Shepper from Roman bricks found in Minster Abbey Church and in the abbey wall.

Cheques and Post-office Orders to be made payable to The Strand Newsbuer Company, Limited and crossed London County and Westminster Bank.

### ADVERTISEMENT CHARGES

The charge for Competition and Contract Advertisements, Public Companies, and all official advertisements is 1s, per line of Eight Words, the first line counting as two, the minimum charge being 5s, for four lines.

The charge for Auctions, Land Sales, and Miscellaneous and Trade Advertisements (except Situation Advertisements) is 6d, per line of Eight Words (the first line counting as two), the minimum charge being 4s 6d, for 50 words. Special terms for series of sx insertions or more can be ascertained on application to the Publisher.

### SITUATIONS VACANT AND PARTNERSHIPS

The charge for advertisements for "Situations Vacant" and "Partnerships" is One Shilling for Twenty-four Words, and Sixpence for every Eight Words after. All Situation Advertisements must be propud.

Advert sements not exceeding Thirty Words, unlineave of name and address, are inserted under the heading "Situations Wanted," free of charge. Rates for Trade Advertisments on front page and special and other positions can be obtained on apple atom to the Publisher.

### REPLIES TO ADVERTISEMENTS.

Replies to advertisements can be received at the Office, Effinisham House, I, Arundel Street, Strand, W.C., free of charge. If to be forwarded under cover to advertiser, an extra charge of Supence is made. (See Notice at head of "Situations.")

Advertisements for the current week must reach the office not later than 3 p.m. on Tuesday. Front-page advertisements and alterations or stop orders for serial advertisements must reach the office by first post on Monday to secure attention.

that may exist for temporary building in other material than wood. Apart from the question of first cost there may be occasions where a more solid form of structure may prove best suited to specific duty.

Among systems of construction suited to rapid building is that of light steel stanchions filled in between with some thin and inexpensive panelling, as brick flat, on-edge, or concrete slab. Of these, if oboccasions where a more solid form of struc-

THE WAR AND EMERGENCY
BUILDING.
With timber supplies restricted, praces high and tending to advance, it is more desirable than ever to consider the scope that may exist for temporary building in the scope that may exist for temporary building in the scope that may exist for temporary building in the scope that may exist for temporary building in the scope that may exist for temporary building in the scope that may exist for temporary building in the scope that may exist for temporary building in the scope that may exist for temporary building in the scope that may exist for temporary building in the scope that may exist for temporary building in the scope that may exist for temporary building in the scope that may exist for temporary building in the scope that may exist for temporary building in the scope that may be scope that

On these general ones we shall consider

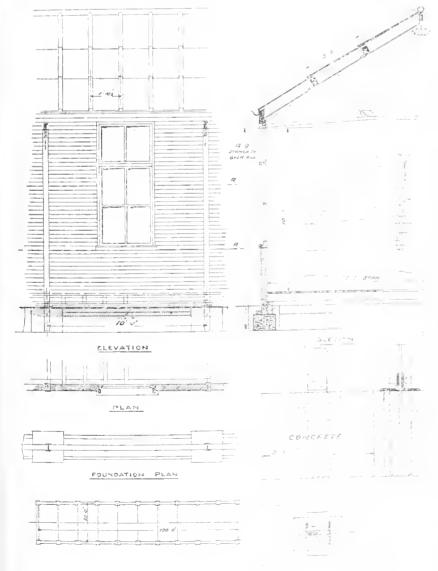

It is to be taken a whereas we cannot even to work, space quarters here the 6 in, apart, we enty need seed each roof truss, say at 10 ft. normal times we can reverby 20 ft by means of note: glot storage for \$27, or less. A filling 22 standardness at the cast say, of £25, in bring all enting, riveting, and content and bolts, nothing more in the way of steel would be morehald the morehald standardness. and bolts, nothing more in the way of steel would be needed, since patie or glar I window would fit in between the stan he is an I give longitudinal stable at your walls, leaving the matter of cross stability to some means of holding down the standhiors to earth, of typing the heads to be factorises, or a combination of these methods; for we cannot, as when doing give the satisfactural brack walls, of ordinary this stassification on the walling to resist with present rely upon the walling to resist with pres

of the standhouse for leading with the standhouse for leading to half-brick walling, brick in edge, or concrete slab. Taking the first the 4-in bricks should fit singly between the fluides of the standhouse. For a 20 fr spin the steel roof truss would weigh signal with and allowing for lead and wirel

or 4,224 1 s., this would repose the weight upon each stanchion; but the seed weight upon each standhron; but the scoll reinforces the wall, and the wall streets the steel, so that if we can use to that the post is held firmly upright we can do with a very light section. Set we are consilering brick flat as upon ea-venience in fitting between the flat 288 at 5 m. let 42 m. s. t. n. w. no. 8027 st. self.

to him a set until the house as were selfer as the strain in the set until the state him as well as the state him as the s over the other. If the recently of star-ture I per Is in the confirmers of star-eh in heal world on as it sast a must the sufficiently powerful to employ this

TEMPORARY IRON BUILDING WITH PANEL FITTINGS.

tic; if the stability depends on stanchion Sometime to earth, this resistance must be brosen slown before the building is wreesed the ordinary cases, no doubt, a roof trass shoe, well bolted to a stanchronheal, provides all resistance needed; but where we wish to cut down the weight of steel as much as possible, it is advan-tage us: well anchor the post to the earth. In emergency building, and for temporary building, we should, with shortage or soiled labour, endeavour to avoid elaborite design and work, as in base plates, ancherage, and head plate connections, see any to keep all tabour on steelwork to catting to lengths and simple dribing to deriveting. We may effect the diget in ground anchorage of stancarons, avoiding real base plate construction, by proceeding much on the old gate pest principle, belding the stanchion ends in a nergic blocks. The concrete could be laid with recesses ready for the posts, and these latter being plumbed and secured as son as, or soon after, the recess is ground, the concrete grips the steel; and if the general foundation is hemogeneous oncrete, to everturn the standingn we must overturn the foundation, or cause a runtur, neither of which is a likely event, excepting in a country of tornadoes The stability of hollow, barn-like structure of the type sketched is greatly assisted where the foundation grips the post.

These considerations are to the point, I cause we desire to keep down cost of construction to the nimest. We do not wish to put a pound of unnecessary steel, in these days, in temporary or emergency building, nor to use superfluous walling material, and as regards this latter point. we may argue that masmuch as rain may penetrate 45 in. of brickwork, 2 in. of walling material would be as good as 42 in., since in either case we must do simething to make the structure waterproof. Hence we might consider that 2-in. If material, such as slab, would fit into 3-in. by 3-in. H stanchious. weighing 82 lb. per foot, and, stiffened to some extent by the rebated or grooved walling in cement mortar, suffice to carry less than two tons of load, even if-for erthodex, permanent construction—the 3-in, by 3-in, be outside the generally accepted ratio of slenderness. With a real grip on foundation and an efficient tie allove, the steel post is greatly strengthened. Again, when an efficient roof truss sits squarely upon a stanchion head, the resultant stress may be said to partake of the nature of a balanced or "concentric" load

The foregoing sketch was prepared to illustrate generally the considerations we have suggested, and to form a basis for argument rather than of insistence. The drawing shows stanchions set 10 ft. apart centre to centre, and it may be worthy of remark that we might employ steel in this manner, and yet, with some very light woodwork, compressed asbestos sheets as walling. The idea may be exercised our either in brick panelling or some suitable form of slab, and in the event of a yet more advanced price of scantling timber, be found suggestive. We need, however to remember that steel is in urgent demand, and greatly advanced in price. It is this reason we have suggested that the stanchions should be as light as possible; and since, in this particular panel construction, they should he regarded not so much as true pillars, but as wal stiffeners much, indeed, as reinforcement we have suggested that the full value of the steel should be obtained by seeing that the posts are securely anchored to the ground. The scheme was sketched to scale for 4, in. brickwork and permanent work we should use \( \frac{3}{2} \)-in, steel; 5 in 1: 4, in joists as stanchions. Tak and in place of 2\( \frac{1}{2} \)-in, angles and bars,

ing a building or shed 100 ft. by 20 ft., we may compare this with the timberframed method. We will assume 10 rt. walls, stauchion construction on the one hand and quartering on the other. Put-ting an extra steel post at each end, the whole number of stanchions is twentyfour. Allowing that the quarters in a temperary timber framed building are 1 ft. b in apart, there would be some 80 c. ft. of timber in 4 in, by 2 in, posts. as against, say, 5,800 lb, steel in 5-in. by 44 in stanchions, giving these extra length to bed well in concrete, as a simpler system of ground fastening than genuine base-plates and anchor bolts, and more suitable where unskilled labour is involved. Taking that which would appear to be the limit in constructive lightness 3-in, by 3-in, H stanchions and 2 m. grooved and tongued concrete slabs, the steelwork would be reduced to less than half, say 2,900 lb. As to roof ing, there is considerable timber in a roof with each pair of rafters tied by a collar. Taking the 100 ft. by 20 ft. pr posal, and allowing, for temporary con struction, say 1 ft. 6 in between the rafter centres, there would be some 120 c. ft. of 4-in, by 2-in, rafter and collar, as against the nine light steel It is true that with the arrangement shown in our sketch there are purlins, pole-plates, and ridge-piece to the extent of about 100 c. ft., which somewhat alters the outlook. In comparing, therefore, a collar-beam roof and one with light steel trusses, we must bear in mind the expense of purlins. A way out, possibly—and we are endeavouring to omit all superfluous timber-would be the em ployment of **z** steel purlins, say  $8_4^+$  lb. to the foot. Light steel offers many ad vantages in purlin construction, where timber is dear. Inasmuch as that cleats are required to secure wood purlins, whilst drilling the principals for these we might make provision, with no more labour, for fastening the z steel to the truss.

The sketch discards any more elaborate means of fixing steelwork than by cut angle-pieces or plain sawn plates. The angle-pieces or plain sawn plates. stanchion is shown bedded in concrete, the cross-hatching on detail being a suggestion for leaving a sinking in the concrete block, to be finally grouted, the exact position in building being located, and the post plumbed, by means of angle-pieces riveted to the web, and taking bearing on concrete finished to a true and level surface. To connect the stanchions to the trusses in place of the ordinary shoe are shown two cut-plates, which are riveted to the feet of principals and tiebeams and bolted to the web of **H** stanchions. As drawn to scale, and as designed, no doubt in place of suggesting a temporary structure, it might be considered suited to quite permanent work and of superfluous strength. Structure of this nature, and no stronger, has been found extremely useful in ordinary com-mercial building, and would be found particularly so where firms have, in emergency, as to fill urgent contracts, suddenly extend their premises. The sketch is put forward rather to be suggestive, and the remarks above made as to wind-pressure, stanchion and panel con-struction and strength bear upon the point of how to reduce steel to a minimum rather than as referring to the design and details shown. To reduce cost it is necessary to gain correct ideas on the method of construction, and to get the utmost out of every pound of steel we must see that it is secured in the best manner.

The roof trusses would be 4-in steel only, with 1-in, bolts and rivets, where in

say, 2-in, only; and connections and angle-pieces in 4 in, in the roof and 8 in, in fish-plates and angles to stanchion connections and quasi base-plates. panelling is shown in brick flat, and where there are no windows might be reinforced, as suggested at R.R. The window is in deal rebated linings, with deal sill and transom and stops against the underside of the pole-plate, which finishes the walling and gives a fixing for the gitter. Since the weight of the roof is chiefly upon the stanchions, and there is little upon the wall itself, very little wall foundation is required, but a larger block of concrete is shown in which to embed the stanchion

With timber at present prices, and the uncertainty as to the future, and assuming steel procurable even at present en-hanced prices, it is possible that there would not be a very great difference in the cost of creeting similar sized buildings in 4-in, by 2-in, timber framing and in the method shown and one or the other of the panel materials discussed. But it would be necessary to use and dispose steelwork with the utmost economy. advance this opinion with caution, but as it is well to look ahead and consider all suitable methods we have put forward a practical alternative to timber. It should be remembered, too, that there are many uses to which steel and slab construction can be put, apart from those immediately attendant upon or the result of war. \_\_\_\_

### THE SKY-SCRAPER.

As yet the sky-scraper is not an institution in England. Remembering the extremely high value of land in the City of London and in some of the other leading towns in the kingdom, and the natural tendency of late years on the part of most leading business concerns to rnn an office, or at any rate have an address, in the capital, wherever else their works or real executive may be located, it is a matter for congratulation that the authorities have resisted the desire to add story to story skywards in Babel-like fashion. For the great disadvantage to the community of high office buildings is sufficiently obvious. They detrimentally sufficiently obvious. exclude sunlight and air from the streets; they prejudicially increase the congestion of traffic; they almost render impossible ethicient fire-protection; and they overtax the sewer and water systems, quite adequate to the smaller population of the same area. Architecturally they are eyesores, of course, but that fact has not hindered their erection in America, and it may not here if Commerce, freed for some years to come from German competition and encouraged by the prospects of as long a peace as succeeded the final crushing at Waterloo of Napoleon's project of pan-European domination, redoubles her efforts to repair the losses of the present and to lay the nations under willing because beneficial tribute British merchants and manufacturers.

On the other hand, if local authorities are obdurate, and Government departments still determined to keep builders and architects idle till the awful total of the war bill is liquidated, many of them will have to seek a living elsewhere when they return to civil life, and will need to learn a little more about the construction of sky-scrapers as well as other structures for which we have little need here. Admitting all their disadvantages just mentioned, it is probable that the community does benefit to some extent by anything that promotes the concertration of business, and it is certain that the ground landlord gets far higher rents -inst as he does here when single houses

are turned into flats. Nowhere, probably, have these considerations so overridden all others as in New York, where floor has been piled upon floor till a maximum of fifty-five stories and a height of 775 ft has been reached, as in the case of the Woolworth Building, which towers like a giant above its compeers, and reduces ordinary four and five storied buildings such as we are familiar with to the appearance of rabbit hutches by compari-

As owners and builders successively sought to outdo each other in America, it soon became evident that the ordinary construction, in which exterior walls earry their own weight and some of the adjacent floor load, the rest being horne by iron or steel columns, became impracticable. The wall thickness insisted on by local authorities became so great that more and more of the space available for renting became absorbed. Windows had to be narrower and narrower to conserve the strength of the walls, and hence light became more and more poorly distributed; and if the unit-bearing capacity of the ground under the footing was low more and more costly work became neces sary properly to distribute the pressure over the soil. This led to the adoption of what is known as cage construction, on which all loads, including the weight of the wall, are carried at each floor level by the steel, and by which therefore weight-carrying walls are practically eliminated from the sky-scraper It follows—at least, in American practice, whether or no time has yet sufficiently tested the theory-that windows may be used for almost the whole of the exterior wall area without danger to stability, and it is claimed that such structures are hurricane and earthquake proof to a greater degree than ordinary buildings. Possible rapidity of construction is another advantage gained. In America an old building is demolished and a new one of twenty-five stories completed on its site in a year. The reduction thus effected on the loss of site and increment value and the interest on the money spent in building is thus very materially reduced.

The increased depth of foundation demanded by such tall structures, of course, means much excavation, and if more than 5,000 cubic yards have to come out the steam shovel is employed. Shoring cf undermined adjacent walls is also a heavy item, and in unstable ground the foundations of neighbouring buildings have to be renewed. The principal types of foundation are continuous, masonry fout ing, raft footing, piles, or caissons. The first method is not recommended, as considerable thickness of concrete is required properly to distribute pressure, and centres of gravity of applied londs and footing area are not likely to coincide. The second is not often used. Formerly piers were often made of stone or con crete, but seldom nowadays, except for small footings; for others the method is too costly. A grillage or raft footing has advantages, and so, of course, have piles, especially concrete ones, which are now very extensively used. The caisson type of foundation is, perhaps, the best of all. It is really a large single pile, round or square, made of brick or concrete. The method favours a larger pressure on the bottom of the footing, since the caissons may be driven with but a bare clearance A large column will carry more per unit area than a small one; perfect contact with bearing area is assured; injury beyond inspection or repair is avoided. and there is less danger to adjoining buildings. Of the two methods of sinking buildings. Of the two methods of sinking the caissons the hydraulic is the cheaper. A pipe, usually of steel, open at ears felt, and fin and copper are used. If the

end, is sank by jets around the lower edge, and by weights placed on top. The dirt is excavated after bottom is reached and masonly built up inside, and on the top of the masonry a grillage is laid to receive the column base. In cases where the soil has not sufficient stability to resist the mrush of water as the caisson is pumped out, the more costly pneumatic carsson must be used. With this a trans-verse bulkhead about eight feet from the bottom of the chamber forms a working chamber, and on the top of this is laid the masonry, an opening being left to the chamber below. A double valve forms an air-lock, which allows the passage of workmen and material. The caisson is forced down by the weight of the pier above. aided by the excavation of the material in the working chamber, in which air pressure is maintained to keep out water and silt. As soon as the rock is reached. and sitt. As soon as the rock is reached it is levelled, and the working chamber filled with misonry. The grillage is similar to that used with the hydraulic caisson.

The columns for the exterior walls are necessarily quite near the property line. and, to avoid trespass, the American architect and engineer favour the cantilever girder, designed and built much like the ordinary plate girder. With the cautilever, however, shear is of more importance than moment, hence those parts which in a plate girder carry shear receive special attention. Sometimes the cantilever girders have more than two supports, thus securing the advantages and the disadvantages of continuous beams, which the American engineer seeks to avoid. As regards the columns generally, and the beams, stringers, tie-rods, etc., there is little difference from those employed here. Floors, of course, receive special attention, brick, terracotta, tile, and concretz, and steel, well protected by one or the other, being usually employed. The ordinary floor with the fire-trap wooden joist is out of the question, although wood is often used on the top of the floor, in spite of the fact that it will not survive a fire. Terracotta, in hollow blocks, forming an arch, set in cement, are more typical than any other floor, flat and agmental arches being both used. latter is the stronger type, and allows a longer span, and is favoured in warehouses and similar buildings. Probably the flat urch would be more effective if the joints were radial, which they seldom are, owing to the additional cost. Combination floors, which are really reinforced concrete floors with terracotta fillers to lessen weight, find some favour. A floor known as the Roebling is also in demand. It is said to have advantages over expanded metal. instead of which it uses a wov in wire sup-Many other systems are ported by rods. in vogue, some of which hardly seem to fulfil the requirements which should be rigidly demanded by the architect. These are: Strength to hear the live load and its own dead weight safely; resistance to : temperature of 1700 Fahr, for four hours while thus stressed, and ability to withstand fire streams after. In only less degree the floor should be agreeable to stand on, have good acoustic top and bottom surfaces, so as to be sound-proof as far as possible, be light in weight, durable, and economical.

Roofs are of only less importance than floors. Wood should never enter into their construction, as protection against exposure fires is indispensable. Tile reofs are fairly common, consisting of several layers of felt on which tiles are embedded in coment. Slate is sometimes used in-

last two are employed, car has to be taken not to place either in contact with concrete or terra offa, on accountcorreston.

The cornice is not favoured. Its in hi teetural advantage is recognised but structurally it is disliked. It is much exposed to flames, and it is an eccentive load on the columns. Wind-bracing is of the highest importance. In addition to its principal function, it gives stiffness to the structure, and American builders maintain that, if properly designed, it will resist earthquake shocks, and that all high buildings should be so designed that the addition of wind to other leads should not cause stresses more than 25 per cent. in excess of ordinary values.

Specifications for high buildings do not seem to us to err on the side of stringency. It is true, no doubt, that there is little vibration, and that the live load seldom Under average reaches the maximum. circumstances it is said the live beid viries from 10 to 40 lb., and it is considered safe to specify from 60 to 150 lb. per square foot. But high authorities have insisted that a selected crowd of people might weigh as shigh as 181 lb, per square feet In view of this, live load should hardly be reduced below 75 lb., and 100 lb. seems safer. Certainly where machinery is in stalled to any extent the floors should be designed for a live load of not less than 150 lb.

From a very practical text book by Prof. Horace B. Thayer, recently pub-lished in this country by Misses, Con-From stable and Co., Limited, which we have already recommended to our British readers, and to which we are indebted for some of the facts gleaned herein, we take the following points in which the specification for the steel frame of an average high office building should differ from ordinary minimum requirements.

Dead Loads.-Dead loads shall be cheesed in all cases from architect's and contractor scross sections and details.

Live Load for Floors.—The live head on first

there from for riots,—the average of first thor shall be taken as 10 fb per square foot plus a concentration of 5.7 fb and where. Use same values for remaining flows, except that 80 is substituted for the uniform

Live Load for Elat Roofs. The live load on a flat roof shall be taken as of 15, per square foot.

Live Loads for Pitch Roofs, The live loads on pitch roofs are to have the same values as or mill buildings. Live Loads for Columns.- The live load on

the columns consists of uniform loads on floors and roofs as specified above; this to be taken at its full value on column in story below; 25 per cent, of same, two stories below; 26 c. r.

at its full value on column in story below; 35 per cent, of same, two stories below; 26 e.g. reent, three stories below, and so on. Maximum reduction, 50 per cent.

Wind Loads,—The wind pressure on exterior walls shall be taken as 5c lb, per vertical square foot acting in any horizontal direction.

Loads for Footings—Footings shall be designed for dead loads plus 20 lb, per square foot for all floors. If dead plus his as reduced for columns plus wind exceeds twice the allowable bearing values as given below all areas must be pronortionately increased. able bearing values as given below all areas units be proportionately increased.

Allowable unit street in

length in inche-

16,000-90 least radius of gyration in inches

Sheer on shop rivets, pins, and gress sections of webs, 12.000; shear on field tracts and holts, 9.000; bearing on shop rivets and puts, 24 c 6; bearing on pins, 24 c 6; other flexural stresses, 16.000.

16,000.

Allowable compression on wa'l placenty:

Brickwork, lime mortar 100: brickwork, Portland cement mortar, 150: concrete Portland cement, 3 sand, and 5 stone, 250, stone masonry, first class, 250.

These values may be increased 50 per cent, for local bearing on bulky masonry as in completions.

cement, 2 sand, 4 stone, 500: I Portland cement, 1 sand, 5 cinder, 200 Footing areas shall be designed for the fol-

wing values:—
Foundations.—On soft clay, 15; wet sand, 15, rednary clay, 50; dry clay, 45; dry sand, 50; course sand, 6, gravel, 75; hardpan (comonted

Computations - Above values are Communitions.—Above values are for dead plus live, for combinations including wind, allowable stresses may be increased 25 per cent appropriate for feedings, which will be governed by the rule given under the heading of L. ans for Footings. It. Deflection Limit.—Beams will possess softh coefficient strength to carry their loads including the dead weight of walls without any assistance from the masonry. So loaded deflections shall not exceed 2.57 the of the span.

#### THE LONDON SALON OF PHOTO GRAPHY.

The annual exhibition of the Lendon Salon of Photography, which was opened on Monday at the galleries of the Royal Society of Painters in Water Colours, 5a, Pall Mall East, is of great excellence and value, and will well repay a visit. Salon aims at showing only that class of work in pictorial photography in which there is evidence of personal artistic feeling and execution, and it has the support of many accomplished amateurs in this and other countries who strive after a synthesis of truth rather than the mechanical reproduction of facts. The scheme of hanging is a novel and effective one: there are no frames, but each photograph is pinned to the wall, which i covered in with large sheets of glass. Robert Demarchy shows some interesting experiments in the use of bromoil transfer on stone, including No. 2, "Rouen," illustrating half-timbered houses in a dark, payed alley, beyond which is the fourteenth-century church; and No. 4. a iridge on "The Seine, Paris." The a i ridge on canals and bridges of Bruges are the subjest of several pictures, notably No. 5, by Miss Francesca Bostwick: 32, by Charles Job; and 328 by T. H. B. Scott. No fewer than seven prints, all of great excellenes in selection, viewpoint, and lighting, are sent by a well-known Glusgow architect and amateur photographer. James McKissack; they include "In the Days of Peace." No. 48, hay-makers leading a wag at in a field, their labours hastened by the threat ming stormed u.s. werhead: No. 25. "La Lieutenance, Honfle er." and the south portal of "South Jacques, Lisieux." No. 123, and two or three seas apis. Direct representations of the west partals of "Rheams, 1899," and the level line of battlements of "Darand the level line of battlements of "Dan ham Castle," as seen from the W as seen from the Wearside below, are given by Frederick II. Evans in Nos. 135 and 137, who also sends an admir, he per tree if "Rye." No. 111, as seen from Winchelsen aer ss the murshes. on which a few isolated sheep and stur of bushes beside the dykes convey an idea of wide and dreary spaces. Sunlight and shadow are contrasted in the interior of "The North Transept. Peterbers ugh." No. 88, contributed by W. A. Clark. The picturesque S ine-side vil-lage of Caudebeesen Caux provides as usual several taking subjects, among which are the view along the main street, with are the view along the main street, when the ages of the church, No. 96, by Peter W. Gibb, and No. 182, the discreasy of the Flamboyant church, by John H. An-ders n, who falls into the common error of styling the edifice the "Cathedral." Selling picture of "The Victoria Memo with a leaf of the new palace gates to the right, is shown by Hector Murchi son, N., 156, and next to it is a representation in solution of "Outord Church." N 157, by J. L. Tucker. Fred Judge, of Hastings reads several brongil transfers

in successive printings, in which colour has been superposed. The subjects are varied sylvan landscapes. country scenes, and portraits. James N. Doos little, of San Francisco, contributes three interesting illustrations of the buildings of the Panama Pacific Exposition now on view in that city, in Nos. 122, 126, and 132, and Miss Jessie T. Banfield, also of San Francisco, makes a good picture out of " The Rotunda, Fine Arts Building. at the same exhibition, in No. 304. Cas the Acre Priory and "The Wharf at Lincoln T are well portrayed by Bertram Cox in Nos. 276 and 277. A. H. Blake lers been to Kensington Gardens for the subjects of his excellent works, Nos. 263 and 270. John La Farge's gateway to the Chapels of St. John the Divine, New lork, is shown in a photograph by Miss Blanche C. Hungerford, No. 320; she also obtains some picturesque effects from the suspension chains of "Brocklyn Bridge," in Nos. 273 and 274. A tenuous column in the south aisle of "Avila Cathedral" is contrasted with the massive piers and quadripartite vaulting above in J. R. H. Weaver's work, No. 310. Among the best of the Swiss scenes are "Curling at Kandersteg," No. 248, by Ward Muir; "The Lauterbrunnen Valley," No. 246, by Miss Constance H. Ellis; and "On the Brenner Pass," by Soveral of the portraits John Keane. Several of the portraits challenge attention, notably the seated figure of "The Prime Minister," a dign field one of "The Lord Chief Justice, and "The Minister for Munitions," i a dignikhaki, ali by Walton Adams (Nos. 230-2); that of James McKissack, No. 55, by Dan Dunlop, and of F. H. Evans, No. 110, by J. R. H. Weaver. Easily first among the seascapes are the fine contributions of F. J. Mortimer.

By Mr. Janne.

1. In general, a beam entering a wall column, or any other quasi-rigid long sup-port, may be considered as continuous, or partially continuous, according to the conditions of the supported end of the beam.

If the supported end of the beam has such length that the allowable adherence between the concrete and the reinforcement in this supported end is at least equal to the tensile stress in the steel arising out of the assumption of continuity, it is clear, then, that the assumption of a continuous beam for the end of a beam entering a wall column is legiti-

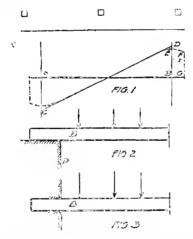

It should be borne in mind, however, that no matter what the assumption is with respect to that supported, a certain part of the tadherence between concrete and steel in the supported end of the beam must withstand the shear in the beam. This fact, at first, seems in contradiction with theory, and a few This fact, at first, words of explanation are perhaps necessary.

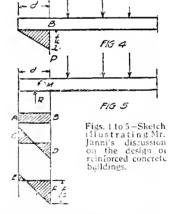

Let us suppose that in Fig. 1 A B is a beam supported at both ends and uniformly loaded; shear sliagram will be given by the line

As in any section of the span the adherence between the longitudinal steel reinforcement and the concrete is proportional to the vertical shear in that section of the beam, it is plain that on the right of B, as well as on the left of A, the reinforcement should not have any tendency to slip, as there is no vertical shear in any cross-section of the supported ends of the beam.

Tests, however, show that, while for limited efforts the theoretical formula holds good, this is not the case with higher stresses, far below the breaking-point of the beam.

The above phenomenon, apparently in contradiction of theory, finds its explanation in the fact that the modulus of elasticity of the concrete is not constant, but diminishes with the increasing stresses; so that, starting from a certain value of stress, the concrete begins to loose gradually its grip on the steel, which

PROBLEMS IN THE DESIGN OF REIN FORCED CONCRETE BUILDINGS.

Ponets of special interest to designing engineers are contained in a discussion (in Con-erct - Cement Age) of the queries propounded below. The subjects are taken up in order by Mr. A. C. Janni, who is consulting engi-neer for the New York Central, and by Mr. A. M. Wolf, principal assistant engineer. fondrom Company, structural engineers. hieago

1. Is it right to consider beams entering vall columns as continuous or partially contimuons?

2. Should the effect of eccentric loading on columns be considered?

3. If a beam enters a wall column and is considered to be continuous or partially continuous, what effect does it have upon the eccentric loading of the columns?

If a column is avowedly eccentrically loaded and no provision for this is made in the design, should we consider entering beams as freely supported or consider them as continuous or partially continuous because of the monolithic nature of the construction?

then finds a new position of equilibrium extending its tensile action behind the vertical lines of supports.

The dotted line in the figure below should represent the diagram of shear. Incidentally it may be seen that the maximum actual shear is smaller than the theoretical one.

As said before, a designer, in assuming the hypothesis of the continuity of a beam entering a wall column, should take care first of the amount of shear shown by the diagram BEFG, and afterwards satisfy himself whether or not the remaining part of the allowable adherence is enough to withstand the moment due to the fixed end assumption.

Mechanical devices such as deformed bars, hooked ends properly made, etc., are, in a general way, good means of insuring the fixedness of that part of the reinforcement of the beam on the supports, while the vertical re-inforcement of the column passing through the supported and of the beam ensures its quasi-rigid connection.

Similar remarks may be made regarding the assumption of a partially continuous beam.

2. The effect of eccentric loading columns is an important condition of equali brium, which should be investigated by the

designer.

A column with eccentric loading is under the action of axial compression and bending; and specially for long spans carrying heavy live loads the compressive maximum stress may reach important values, the tensile stress in the steel doing likewise.

3. A wall column being a column rigidly

connected with the wall, no matter what the assumption of the beam entering the wall column may be, it has no appreciable effect upon the column itself.

In connection, however, with the idea of a beam and its supports, there is a certain point in the design of a beam entering a column or a wall column, which is often overlooked by some designers; the point referred to is the investigation of stresses upon the support of a heam, arising out of the various assumptions made concerning the supported end of it, or, in other words, out of the reaction of the support.

A few words on this subject may not be

amiss.

Let Fig. 2 represent the case of a beam with a supported free end, and Fig. 3 the case of a beam with a supported fixed end. The distribution of the compression upon the support P, in Fig. 2, which is indeterminate, should be assumed, for the sake of safety, to vary according to a straight line, as shown in Fig. 4, the maximum compression fc being **by**:

 $fc = 2 \frac{R}{b \cdot d}$ 

where R = total reaction, b = width of beam, d = length of the supported end of heam.

The case shown in Fig. 3 is never fully realised in practice; but the investigation of the stresses upon the support P should always

be made.

This case may be represented as in Fig. 5. the reaction R being a compression and M

the moment.

The diagrams to which each of these re actions give place are shown in Fig. 5; AB being the diagram due to the vertical reaction R (compression) and CD being the diagram due to the moment M.

Adding those two diagrams together, the total diagram EF is obtained, which gives the maximum fc, the value of which can be

given also by the expression:

$$fc = \frac{1}{b \times d} \mathbf{R} + 6 \frac{\mathbf{M}}{d}$$

where the letters have the same meaning as above.

4. A column, which, being eccentrically loaded, has been designed disregarding such condition of loading, is a deflective unit of construction, the conditions of equilibrium of which can hardly be improved by assumptions regarding the beams supported by it.

The assumption of a freely supported beam while it is rightly made for the sake of safety, with respect to the beam itself, cannot be upheld with respect to its support, especially when this support is a column whose re-inforcements extends vertically through the end of the beam and above it.

The prevented movement of the supported end of the beam during its deflection gives place to a moment, no matter whether or not the designer in his assumption took care of

Even if the reinforcement of the column does not extend in the beam end and above it (which would be mother serious mis-take), the friction between the top of the column and the bottom of the supported end of the heam is such that it would tend to deflect the column toward the span, during the deflection of the beam.

In either case, therefore, a bending moment is developed at the top of the column, which should have been taken care

of.

The other two assumptions, namely, continuous and partially continuous beams, which are more proper for a beam entering a column, while they would result in economy, would not improve the conditions of the equilibrium of the column. By Mr. Wolf.

In the writer's opinion it is right and proper to consider beams entering wall columns as continuous or partially so, the degree of continuity depending mainly upon the number of spans in the building parallel to the beam in question, the reinforcement of beam and the size and location of column, that is, whether the latter is in an upper or a lower story.

The degree of continuity to assume in beams east monolithic with columns is dependent upon so many conditions that exact tuies are

umpossible of taranulation.

For example, a beam may be built mono-lithe with a wall column, but so little steel provided for negative moment at the column that when loaded the beam cracks at the top and the continuity is entirely destroyed, and the beam becomes practically a simple span. It is apparent, then, that to have continuous action steel must be provided in the top of the beam to care for the stresses developed. Just how to arrive at the amount of reinforcement necessary is a subject regarding which much has been written, and as a result we have some bending moment formulas covering average conditions and which give safe results, and have been used to a considerable extent, and, in addition, are recommended by the Joint Committee. These are  $Mwl^2/12$  at centre and at support for interior spans truly contamons, and for end spans,  $Mwl^2/10$ , at centre and adjoining support of end spans for both dead and live load under favourable conditions of fixity. For beams and slabs continuous moment is usually taken as wti/8 at central support and  $wl^2/10$  near middle of -pan. (These moments, of course, being for uniformly distributed loads.)

A beam is said to be fixed at both ends when the tangent to the elastic curve is horizontal over each support. Now, a beam framing into a large lower story exterior column which is relatively very stiff and unvielding will, if properly temforced, be very nearly fixed, and it is evident that if steel is provided for a moment of 1/10 wt over the supports and the centre the construction will be safe, for a coefficient of 1/12 applies to a fixed beam, and 1/8 to a simple beam, 1/10 being an average

of the two coefficients.

Taking the opposite case of a slender top story exterior column supporting a roof beam, it is evident that the conditions are by no means so favourable for continuous action, for more or less hending is sure to take place in the column, and the conditions of support approach those of a simple beam. For this reason, then, little or no continuous action should be depended upon in exterior beams of raif construction where light columns are used. Here again the judgment of the de-signer must be used in determ uing just what moment coefficient to use.

Some designers argue against reinforcing a continuous beam over the support for the full negative moment in accordance with the fornullas given above, which are for beams with constant moment of mertia, for the reason that the negative moment can be reduced by making the beam stiffer in the middle, or, in other words, designing for an increased hend ing moment at the centre and a reduced moment over the supports. It has been generally accepted, however, from studies by Santord E. Thompson and others, that it is in general unecommical to design concrete beam stiffer in the middle than over Sametimes, in order to comply the support. Sometimes, in order to comply with city building ordinances, it is necessary. in order to economise as much as possible, to design beams which tend to act as continuous for a lesser moment over the support than at the centre, as called for by ordinance, thus making allowance for the increased stiffness of the beam at the centre. Thus, for in stance, it by ordinance a moment of wt 8 is specified at mid-span for continuous beams, the steel over the support should ho 6/10 of that at centre to have the beam act as somewhat continuous, and, at the same time, be as economical as possible in the use of steel. This practice is often followed. use of steel. This practice is often followed, loft truly continuous action is not obtained, even if the safety of the structure is not endangered. For truly continuous action to develop, it is necessary that the member be designed for the maximum theoretical.

At a meeting of the town cannot for Mark borough, four candidates for the office of horough, four candidates for the office of horough surveyor and inspector of nuisances to Hartshorne and Seals Rural District Council, was elected.

moment which occurs ever the supplied uniform loading, and for a number of you throoms spans in formal which it solling the spans of the by the above formula is placed over the sigport, the steer will be overstrested cracks will tend to develop.

Some harding ordinances and been to practice by stating that the some of the centre moment and that over support should be 1,6 kHz, and that at least sufficient size, to fulfil the requirements of a nominity perto 1.18 u/ sha, he had over the vigg Such recommendation between the support encoding commenced in the specific state of the support encoderated commenced in the support pagency of normalists contained the matter seems has the real treatment of the fact, more fainty she support in the traced to this practice than to any other

cause.

It does not require much dominated a to prove that contain uses a ties cannot be obtained by using a centre moment of  $1.9 \text{ m}^{1/2}$  and a moment of  $1.18 \text{ m}^{1/2}$  over the support (as the total moment of  $1.6 \text{ m}^{1/2}$  requires. The (as the total moment of 1 6 mt requires). Presuch a case the steel over the rapper's will be greatly overstressed, and cracks will occur over the supports, and the beau approach the condition of a simple beau, provided, of course, that the ends are supported Firstly, it can be said that it is impossible to obtain and distributions. any desired distribution at centre and supports by the simple variation of reinforcement. The laws of mechanics govern these things, not the whims and disires of the

The effect of eccentric loading on columns should be considered, but to arrive at a mathematically correct solution of the problem is practically impossible, on account of the number of variables which must necessarily be considered. Ordinarily, in buildings where the extent of the live load severy definite it will generally be found satisfied. factory to reduce the unit stress in exterior columns to, say, \( \frac{2}{3} \) of the average unit stress used for interior columns, depending upon the type of construction, for to compute the stresses due to eccentricity for the great variety of conditions of loading which might ocenr is not justifiable. In structures in which a definite condition of live load is to be maintained at all times the effect of eccentricity should be carefully looked into. The lest treatment of the subject of exect. tric loading considerations on columns, in the writer's opinion, is found in "Reinforced Concrete Design," by Faber and Bowie.

When a beam centres a wall column and is considered to be continuous or partially so, the result is that additional bending is thrown into the column, or, in other words, the eccentricity is increased, and privious should be made therefor in the design of the

column.

In regard to the last question, the has practically been answered in the for 2002. If a beam is considered as freely suggested and designed as such (there is no rainforcement placed in top of supports, the contribution columns will not be so great as a tricity on columns will not be so great as if the beam is lesigned as continuous, or partially so. Therefore, if no provision is to be made in column to care for the bead ig due to eccentricity, the beam should not be designed as continuous or ten dy continuous at the support. It is, the ever, is not good or economical design, for it would probably, in most cases, not not to more steel to design beams as cert to as and to strengthen the columns at the arc for the eccentric load imposed, that to design the beams as simply supported at 1 arc strengthen the columns. Religious decided as a mosoluthic or continuous, and therefore, crone, from 18 very 1450re, 19638 in monolithic or continuous, and therefore, wherever possible, advantage should be taken of this characteristic, for this is the distur-guishing mark of the most advantal refe-forced concrete lesign

#### THE PANAMA-PACIFIC INTER-NATIONAL EXPOSITION, SAN FRAN C18CO.

The vast exhibit palaces, which contain the vast exhibit paraces, which contains more than 400,000 displays, are being eagerly inspected by the visitors. From the thunder-ing Palace of Machinery, with its giant engines, pumping plants, dynamos, printing presses, and Linotype machines in action, through the vast Palace of Transportation. where the earliest types of locomotives con-trast with the Great Mogul engines of the present day, where sections of large oceanic liners are seen in contrast with tiny models into the great Palace of Agriculture, where threshing machines. harvesting machines. reapers, sowers, are beheld in operation, into the Palace of Food Products.

Wherever practicable, machinery is shown in operation, and all steps in the processes of production are illustrated A giant laundry, operated by latest methods, a knitting machine, a broom factory, a fire liose factory, a coin-stamping machine are among the many operating plants in the Palace of Manufactures.

There are upon the grounds no less than fitty tour moving picture shows, wherein are daily displayed, without charge, in the exhibit palaces and in State and national pavilions well selected and attractive scenes revealing the activities of the various states and countries. Lectures accompany many of the displays, and the visitor is enabled to enjoy scenes from Argentine, China, Japan, the Philippines, the Netherlands, Cuba, Sweden, and forty-three other lands, while cinematographs of important works, such as the Panama Canal, the New York State Lock Canal, the manufactories of the great corporations of the United States are displayed without charge.

The free pyrotechnics as night, which ar part of the spectacular illumination of the Exposition, draw thousands of visitors to cha-marina upon the shore of San Francisco harmarina upon the shore of the same hour. Here thunder and lightning are simulated with a vividly realistic effect, and a grant battery of forty-eight searchlight projectors, with 2.600,000,000 candle power, the wishaits of coloured light upon great jets of steam or clouds of smoke liberated high in the heavens. The brilliant shafts are visible at a distance of sixty miles from the Exposition grounds. Here thunder and lightning are simu-

In the Persian exhibit in the Palace of Manufactures many bits of old pottery, paces of ancient armour, silver briefa brief, and woven rigs are on exhibition. In the Royal pottery collection are 150 pieces with a total value of not less than a quarter of a million dollars. This in Jules the celebrated Bowl of Contemplation, 9.0 years old, and one that of Contemplation, 9.9 years old, and one that could not be hip cated by any collector. The famous Possible school of weaving and embroidery. There are velvels, brocades, and cashineres of every century from the minth to the fixefith. There is the cloth of gold of the Adam. Eve, the tree of life, the cypress, and the apple, a rare bit of embroidery that has been sought by every collector in the world, but with still r mains in the possession of the Shah of Person. The Royal rug of camel's wool that has been used but once each year during the past two centuries, during the Royal reception, is on exhibition.

The Balkan States, which, in their strug-gles for independence, have been the centre goes or independence, have been the centre about which have evolved many interna-tional conflicts, display a collection of gar-ments, hand wover and ambroil red by the Bulkan massaits. Plant. ments, hand woven and embroid red by the Bulkan persants. There are numerous examples of decorative art, including many curbs and fabrics made by the children in the Royal School of Roumana, as well as a set of table dishes and glass ware used 100 years (20 at State dinners). The famous Prince Starza actually used many of these houself, and it is said that the glass ware is of a find that has never been duplicated, or even successfully imitated. There is a hammered silver set that was used by the Bulgar an royal fundles.

bile parts, textiles, portery, and the like Located in the Palace of Manufactures is the Dickens china ware, bearing characteristic Dickens scenes, with excerpts from the Royal Dirulton ware and Devon pottery, bits of bric-à-brac, jars, vases, lamps,

and jasper ware are displayed.

In the Italian Pavilion, in the Italian section of the Palace of Varied Industries, and in the Palace of Manufactures is a display of one of the two finest collections of laces in the world. There is a point de Venice tablecloth of the fourteenth century, valued at 15,000 dols.; a Burano lace scart of the thirteenth century, with a foundation of tulle and a border of Rosselina lace; and a teacloth of the seventeenth century, repre-senting Raffael's painting of the Twelve Hours in point de Venice and filet; a small Hours in point de Venice and filet; a small lace cushion top, about 20 by 30 ins., depicts Botticelli's 'Spring,' and is valued at 400 dols. Another beautiful teacloth represents Guido Reni's 'Aurora.' In addition, Italy displays many valuable bronzes, marbles, specimens of carved furniture, painted velvets, silks, hats, musical instruments, motorars wines and food products. A large and cars, wines, and food products. A large and beautiful collection of modern Italian sculptures by many of the foremost sculptors of the day is displayed in the Palace of Manu factures. These include the famous statue Christ Emerging from the Pagan Temple. by Professor Raffaelo Romanelli; "The Fountain with the Frog." by the same sculptor; "Napoleon at Moscow," by Professor Vanetti; "The Pompeiian Girl and Algerian Girl." "Maternal Love," and other striking groups. The beautiful Italian pavilions, which won the grand prix for foreign pavilions at the Exposition, is always crowded with eager and enthusiastic sight seers. In the pavilion, which is in reality not one but eight interconnecting structures grouped around Italian courts, one finds the architecture of typical cities at the height of the Italian Renaissance.

Switzerland, which, although a neutral nation, has 350,000 men in arms guarding her borders, exhibits the chief watchmaking companies of the Republic, as also hundreds of displays illustrating the household hand-crafts. The Berner Woodcarvers' Association of Marrigen has an exhibit of the wares which the Swiss, in their winter nights, have learned to execute.

The displays of the Scandinavian nations, Norway, Sweden, and Denmark, are shown in a pavilion in characteristic architecture. The art exhibit of Norway occupies five rooms devoted to painting and sculpture, and two rooms to graphic art. The Norwegian Pavilion is filled with dioramas and panorams portraying the scenic charms of the country, the northern fiords, the lofty spruce-clad mountains, the fishing industry; and there are many models of ships of the fleet of merchant steamers which carry the traffic of the kingdom. Duplicates in miniature of ancient war craft used by the berserkers of early days and ancient galleys

Another European display of extraordinary Another European display of extraordinary interest is that of the French Republic. This is largely portrayed in the French National Pavilion, although France has made an elaborate display of art works in the exhibit palaces, including the Palace of Fine Arts, and is notably represented with her wines, her machinery, and laces in the Palace of Mannfactures. One of the in-teresting exhibits in the latter palace is a new type of rapid firing gun now employed by the Legions of France. In the French Pavilion are many priceless relics and an-tiques, as well as displays of modern com-mercial art, the latter including remarkable exhibits of life-size models, draped in the latest Parisian fashions. Included in the French display are models of the famous Freuch dolls, priceless Gobelin tapestries of Louis XIV., relies of Rochambeau, Lafay-ette, Balzac, Victor Hugo, and other Freuch ette, Balzac, Victor Hugo, and orner connected to the four great tapestries which, with many modern tapestries, are in the Pavilion belong to a suite of eleven, the car toons for which were the works of Le Brun, Bulgar an royal fundles

The substantial English representation at the Exposition includes machinery, automotif Louis XIV. They were made between

the years 1668 and 1683, and represent different scenes in the life of Alexander the Great, the conquests of the wild tribes of Asia being the theme of the scenes, a theme which lends itself to graphic portrayal because of the slaves, elephants, and mighty, though crude, implements of war employed at that time.

In the Netherlands Pavilion, with its giant towers rising far into the air and surmounted by many flagstaffs, fishing scenes in Holland are reproduced in panoramas and dioramas, Models of railway cars, of steamships, displays of tin and rubber and sugar from the Netherlands' opulent possessions in the East Indies, together with illuminated dioramic scenes with alcoves, from which the sight-seer may gaze down upon apparently distant fields dotted with tiny factories, great irrigation flumes: while nearer, as though npon the edge of some frowning cliff, is seen the tropic foliage of the country, and further away rise the lofty mountains indented by ricefields that rise like steps in terraces up their precipitous sides. One is here borne into a far country, into the Orient of spices, of rich mines, and vast plantations, with all

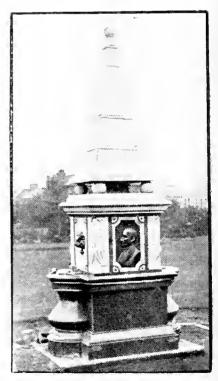

or men imnes, and vast plantations, with an its fascination and strange life.

Portugal is represented by an attractive pavilion: and Belgium, through the cooperation of France, has a great section entirely its own in the French national pavilion. Spain is represented with many priceless paintings and works of art, and in the commercial section by her wines, tapestries, and

valuable antiques.

# THE DEWAR MEMORIAL DRINKING FOUNTAIN. PORTOBELLO.

Last week (on page 309) we gave some particulars of this memorial to Dr. Dewar, which has just been erected in the Abercorn

Gardens. Portobello, from the design of Mr. T. Currie Bell. Synod Hall. Castle Terrace, Edinburgh. We now give a view of the monument, which is carried out in grey Aberdeen granite, and has a height of 14 ft.

#### ---RIVINGTON'S NOTES ON BUILDING CONSTRICTION.\*

No text-book of our time has so deservedly enjoyed so continuously the high position at once taken by it when the first edition of this manual first appeared, some forty years since. It exactly met its purpose, which was to help students preparing for the examination in building construction held by the Board of Trade at South Kensington.

but its popularity, through that and many | subsequent editions, among architects, builders, and the various members of the architects. trades interested has been unequalled.

Naturally, after the lapse of ten years, during which changes in building construction have revolutionized methods of construction it was felt that more than mere revision was needed to bring the work up to date.

Under the editorship of Mr. W. Nobbe
Twelvetrees, therefore, the whole has been re-written by well-known architects and others. New chapters on Building Regulaothers. New chapters on Building Regula-tions, Damp and Sound-Resisting Construc-tion, Steel Skeleton Buildings, Reinforced Concrete and Brickwork, Concrete Blocks, and Fire-Resisting Construction have been introduced, and an appendix contains selected examination questions from papers set by the B.I.B.A. and other educational There are 484 illustrations. bodies.

Part 1. contains eighteen chapters devoted subjects demanding attention before a building is commenced, and to forms of con struction by means of which structures of different types are carried up from foundation to roof level. Part H. deals first with roofs and then with various branches of domestic engineering and sanitary equipment.

The subject matter is no longer based on a single course of study, but "a purely logical sequence" is followed in arranging the order of the subjects treated. Mr. Reginald Blom-field, R.A., contributes an introduction, in which, while emphasizing the value of practical knowledge, he points out that such a foundation, though indispensable, is only part of an architect's training, and that the student must never forget that architecture must include in its purpose the appeal to the imagination and the sesthetic sense

The list of contributors includes Mr. W. E. Riley, the superintending architect to the London County Council: Mr. W. Douglas Caröe; Mr. Brook Kitchin, the architect to the Local Government Board; Mr. H. V. Lanchester, Professor Beresford P.te, Mr. Herbert Phillips Fletcher, Mr. Matt Garbutt, Mr. W. Kaye Parry, Mr. A. W. S. Cross, and others.

#### THE NEW PARLIAMENT BUILDINGS FOR MANITOBA.

The Royal Commission appointed to investigate the charges made in regard to the new Parliament buildings at Winnipeg for Manitoba issued an important interim report on August 24. The buildings were erected Manitoba issued an important merini reput on August 24. The buildings were erected from plans by Mr. F. W. Simon, of Liverpool, in conjunction with Mr. Boddington, and in July, 1913, the contract was let to Messrs. Thomas Kelly and Sons. In July last an allegation that the contractors conspired with members of the late Government to obtain over-payments was the subject of an action brought before Chief Justice Mathers by the Attorney-General, and led to the appointment of a Royal Commission, with Chief Justice Mathers as Chairman, the other members being Sir Hugh John Macdonald and Judge D. A. Macdonald. The interim findings of the Commission were made public on the 25th ult. The Commission unanimously found that there was a "fraudulent scheme or con-spiracy" entered into prior to the letting of the contract, and that the scheme or conspiracy was formed for the purpose of getting a campaign fund out of extras on the contract. The report names Thomas Kelly, George R. Coldwell, and Sir Rodmond Roblin as partners to the scheme in its inception, and states that "at least some of Kelly's sons," Dr. R. M. Simpson, V. W. Horwood, James H. Howden, ex-Attorney General, and Dr. W. H. Montague, ex-Minister of Works, later on became parties to and acquiesced in the plot. The Commission further found that Thomas Kelly was fraudulently overpaid \$892 098 10c., that steel contracts were inflated, and that the caisson foundations should have cost less than the piles for which they were substituted. The Commission state that they find all of the charges made by the Hon. A. B. Hudson on the floor of the Legislative Chamber, and in the memorial presented to the Lightenant Courser, base presented to the Lieutenant-Governor, have been fully proven. In connection with con-nivance in a scheme for keeping a witness

named William Salt on holiday" in the United States, the Commission names George United States, the Commission names vising R. Coldwell, V. W. Horwood (Provincial Architect), Ir. R. M. Sampson, James H. Howden (Attorney General), W. A. Ellhott (Chief Inspector of Buildings), M. G. Hook, and Harry W. Whitla, K.C. The report is and Harry W. Whitla, K.C. The report is particularly drastic with regard to James H. flowden, whom it accuses of making many untrue statements under oath with regard to marge statements under oath with regard to various sums of money involved in his testimony. It finds that he helped G. R. Coldwell to raise \$10,000 to keep William Salt away from Winnipeg For the \$24,000 expended on Salt's Winnipeg For the \$24,000 expended on Salt's blobday. Dr. R. M. Sanpson was the finan cial ageir.

to the contractors, the Commission find that Thomas Kelly and Sons were informed of certain contemplated changes in the plans be fore tenders were due. That the tender put in by the Peter Lyall Company, being the only one received by the Department of Public Works on July 2, 1913, within the time advertised, was on that day either shown to Thomas Kelly, or its contents were made known to him, and on the following day a tender was received from Kelly's firm for \$3,250 less than the Lyall tender. All the circumstances point to Sir Rodmond Roblin as the person through whom or by whose authority Thomas Kelly obtained the advance knowledge of the Lyall tender schemi

That a frauditient conspiracy formed before the tract was entered into to obtain from the extras an election fund was afterwards continued and carried out. For this purpose Dr. R. M. Simpson, V. W. Horwood, the provincial architect, and, at least, some of the other members of Thomas Kelly and Sons be other members of thomas New participants in carrying it out, in addition to those by whom the original conspiracy was formed. There the original conspiracy was formed. There is no direct evidence that J. H. Howden, the Attorney-General, was a party to the conspiracy at its inception, but his subsequent conduct convinces us that he early became a party to it. We believe that Dr. Montague, for some time after be became Minister of Public Works, did not become a party to the fraudulent scheme entered into by his colleagues, but that he was informed of its ex istence and purpose by Dr. Simpson in January or February, 1914, and that he then became a party to it." The Commission conhecame a party to it. The Commission contime that they find that the contractors. Thomas Kelly and Sons, were paid by the Government five sums of money amounting to a total of \$892,098 10c.; that in three of these cases, the north wing steel contract for \$331,100, the south wing grillage for \$215,000, and the superstructure steel for a southern central portion and dome for \$802,650, Sir Rodmond Roblin and Kelly and Sons well knew that prices were inflated by the inclusion therein of large sums for an election fund, while there had been no plans prepared for the dome and no honest estimate of the steel required could be made. Further, "That Sir Rodmond Roblin and Montagne, some time after October 18. 1914, and before January 1, 1915, fearing the consequences which might result from the discovery of the aforesaid \$802,650 contract. destroyed the Order in Council passed on July 4, 1914, authorising the execution of said contract and the several copies thereof, together with the said contract and every proof and record known to them by which its exist ence could be traced. That Dr. Montague agreed with the contractors, Thomas Kelly and Sons, to recoup them out of the dome con struction to the extent of \$75,000, at least, for the loss they sustained in the destruction of he destroyed contract, and that he sent Mr Horwood to Chicago in company with Thomas Kelly to airinge with Mr. to increase the weight of steel in the dome, plans then being prepared by him to the exent necessary to accomplish this purpose hat Mr. Horwood did so arrange with tent necessary to accompan this purpose; that Mr. Horwood did so arrange with Mr. Shankland, who did increase the weight of the steel as required. That the steel plans for the dome prepared by E. C. Shankland were overloaded to the extent of 407 tons, representing a possible overpayment to the contractors of upwards of \$20,000. That the Government agreed to pay extent of 467 tons, representing a possible overpayment to the contractors of upwards of \$30,000. That the Government agreed to pay the said E. C. Shankland five per cent, on the take place at Golder's Green to-morrow contract price of the dome to be erected from (Thursday).

his pains, and in December 25, 1914, paid him \$15,000 on acount. This was more than double what his remuneration would have double what his remuneration would have been, based upon the necessary tonnage of steel in dome at reasonable ten prices. That during the session of the Public Accounts Committee in March, 1915, W. A. Elliott, the thier inspector, at the request of V. W. Horwood, certified the yurdage of concrete on the last three applications for payment in respect of the caissons, and William Salt, also at Horwood's remest, aboved to records of at Horwood's request, altered his records of the depth of the caissons for the purpose in each case of deceiving the said committee. each case of deceiving the said committee, and that in each case Mr. Horwood acted on the instructions of Mr. Co.dwell. That when Mr. Horwood and Mr. Coldwell found that William Salt would not falsely swear to the accuracy of the said altered depths of the caissons, he was by them sent out of the province beyond the by them sent out of the previous beyond the reach of the said committee, and was paid large sums to remain beyond the jurisdiction of your Commissioners.—Finally, the Com-mission find that after giving the contractors credit for all work done and the value of materials on the site and or stell tabil cated but not delivered until the work was stopped in May last, the said contractors were overpaid to the extent of \$701,035,59.

The preliminary investigation as to charges of conspiracy against Sir R. Rob, a and Messrs. Montagne, Howden, and Coldwell, ex-Cabinet Ministers, opened at White peg on Friday. Mr. Horwood, the provin ready. Mr. Horwood, the provincial architect, stated that Mr. Coldwell told him to be guided by Dr. R. M. Simpson, president of the Conservative Party, so that a campaign fund might be raised from the money expended on the new Parliament He gave details of amounts which were added to various contracts, aggregating six figures, and he declared that Dr. Same son dictated the sums needed.

The work of construction at the Parliament buildings has been resumed under the direct supervision of Mr. F. W. Simon, F.R.I.B.A., Liverpool, whose plans were successful in the competition, but who was not allowed to take charge by the late Government.

#### ---OBITUARY.

The death took place, suddenly, on Saturday, of Mr. George Grey, of Milfield, Wooler, a well-known north country land agent. He was born at Milfield in 1851, and cated abroad and at Cheltenham College. The late Mr. Grey had the oversight of many large estates, including those of Earl Grey, the Marquis of Waterford, the Hon. F. W. Lambton. Sir F. D. Blake, and the trustees of the Blackett Ord Estates. He was a justice of the peace for Northumberland, having been appointed in 1886, and was chair man for many years of Glendale Board of Guardians and of Glendale Rural District Council. He was a member of the Northumberland County Council for the first six years after its institution.

We regret to announce the death, at the We regret to announce the death, at the comparatively early age of 44, of Mr. Graham Nicholas, F.R.I.B.A., of Pilgrim House, High Street, Lymington, Mr. Nicholas, who joined the Royal Institute of British Archivery, 1770 tects as a Fellow in 1906, passed away at his residence on Sunday week after a long ill His remains were cremated at Woking ness. His remains on Wednesday last.

on Wednesday last.

Mr. Philip Arthur Cawte Wilkinson,
L.R.I.B.A., of Craven House, Kingsway,
W.C., died very suddenly early on Monday
morning at the flat he occupied at 64, Glencester Place, Baker Street, W. Mr. Wilkinson,
who was 52 years of age and unmarried,
was the third son of the Late Mr. Ph.lip
Wilkinson, F.P.J.P.A. of Prop. 11, 101. who was 52 years of age and numarried, was the third son of the Lite Mr. Philip Wilkinson, F.R.I.B.A., of Grenville Place N.W., with whom, after having served his articles with Messrs, Wimperis and Arber he was associated in practice for many years in Lincoln's Inn Fields. His practice lay chiefly in domestic with and in surveying. He had been a member of the Architectural Association since 1884, and joined the Royal Testic

BOARDROOM CANADIANBANK OF COMMERCE: HEAD OFFICE AND BANKING ROOM, UNION BANK OF CANADA. TORONTO, ONT.

These two notable commercial buildings erected in Toronto are excellent examples of the work designed by Mr. Frank Darling, F.R.I B.A. Royal Gold Medallist, 1915), and carried out by Messrs. Frank Darling and John A. Pearson, the well-known architects, of Toronto. We selected this pair of photographs now reproduced from the series of views placed at our disposal by Mr. Darling on the occasion of their exhibition at the Royal Institute of British Architects a short time since, when the Royal Gold Medal was presented to him in recognition of his ability and for the high character of his buildings The top picture on the accompanying plate Ellustrates the Board-room of the Canadian Bank of Commerce, Head Office, Toronto, The oak panelling, which lines the apartment, was carried out by Messrs. J. C. Scott and Co., and the decorations were done by Messrs. Jos. McCausland and Son, both firms being in Toronto. The lower photograph she interior of the Banking room of the The lower photograph shows the Bank of Canada, Toronto. Messrs. Wright and Co. executed the ornamental plastering. The bronze work was furnished by the Architectural Bronze and Iron Works, Toronto, and the Lautz Company of that city were employed for the marble work. All the executants belong to Toronto. cutants belong to Toronto.

#### " PEMBURY RIDGE," PEMBURY. KENT.

The views we publish show the entrance and garden fronts of a simple country house planned to give comfortable rooms and easy service. It was designed by Mr. W. Henry

White, F.R.I.B.A., of No. 14A, Cavendish Place, Cavendish Square, London, W., and the building is now being erected by Messrs. G. and F. Penn, builders, of Pembury, Tun-bridge Wells. The ground-floor story is finished on the outside with white rough-east, and the upper story is hung with red sand-faced tiles, the roof also being covered with similar tiles. The gardens have been laid out to the architect's designs.

#### A MOSQUE DOORWAY, CAIRO.

With regard to the drawing of the Mosque Doorway, Cairo, I am sorry I am unable to give any particulars of the mosque-except that it is near the old city gate, known as the Bab Zuweilah, and is one of the lesser of the many Carrene mosques. It is typical of a great many dooways, colour being used freely in the shape of tiles, mosaics, and different marbles. It is still used, and has been kept in very good repair by the "Comité de Con-servation des Monuments de l'Art Arabe." The drawing is a lithograph done on transfer paper from one of my water-colours, and after the drawing was on the stone some further work was done upon it.

W. J. Palmer-Jones.

CHURCH OF ST. MICHAEL AND ST GEORGE, HESWALL, CHESHIRE.

The site for this church is on the crest of a hill stoping steeply towards the east, and advantage has been taken of this to place the vestries, church-room, and some class-rooms beneath the eastern portion of the church. The plan has been arranged on the passage aisle principle, with a wide nave and chancel (32 ft.) and a side chapel. The altar will be in view of practically the whole congregation. There is no chancel arch, but the junction of the chancel and nave is marked by wider piers, with niches for statues of baint Michael and Saint George. It is proposed to erect the eastern portion of the church first, but not until peace is declared. The walls are to be

of local red sandstone, the roofs covered with grey Welsh slates, and the floors paved with oak blocks. The drawing was hung at the Royal Academy. Mr. R. T. Beckett, of Chester, is the architect.

# THE OLD MILL HOUSE, FITTLE-WORTH, SUSSEX.

The Old Mill at Fittleworth is well known to artists, its quiet grey stone walls and simple shape harmonising with the twin bridges near by. The accompanying drawing was in this year's Royal Academy exhibition. The Mill House itself and its adjacent cottages were marred by more modern additions and by the sheds and stables which were the necessary if ugly adjuncts of the various activities of the owner. When two or three years ago the Mill became the property of the late Sir Frederick Mirrielees it was decided to re-front the Mill House, to alter its internal arrangements somewhat, and to add to the accommodation. The modern brick front was replaced with a simple front of Pitbingdean stone. A large hall with covered way and porch were planned to link the house and cottages in one composition. The narrow central staircase was removed to make way for a long living room in the old front of the house, and replaced by a wide circular stair with solid oak winding steps and a solid brick newel. This staircase is placed in the angle between the hall and living room, and opens into the garden entrance vestibule in the internal angle. The over-hanging upper story of the back part of hall is hung with old tiles of a fine rough surface. The roof has also been covered with old tiles. The chimneys are of narrow bricks and stone. The windows have mullions of Pithingdean stone, with iron casements and leaded lights. The fireplaces are open-hearth fires of very simple design. English oak was used for the moulded beamed ceilings in the living room and hall, as well as for the framing of the roof to of English oak, with moulded boards and square ledges. The general contractor was Mr. Job Euxford, of Forest Row, Sussex. The unnecessary sheds were removed during the progress of the work, and the garden is now being formed with a simple terrace, linking the new lawn to the old garden on the higher ground in rear. The whole forms a group of considerable interest. Mr. L. Rome Guthrie, A.R.I.B.A., is the architect.

# LATE 17TH CENTURY ENGLISH BRICK-WORK FROM A HOUSE AT ENFIELD NOW PULLED DOWN.

This sheet of details was measured and drawn by Mr. Walter W. Hitchins, of Reading University College, from the front of this old building as now rebuilt in the large archi-tectural gallery of the Victoria and Albert Museum. South Kensington. The house formed part of the brick front which was previously a celebrated school at which the poet John Keats, the composer Edward Holmes, and the writer C. Cowden, were educated. Quite apart, therefore, from its special value as a piece of historic building in brickwork, the composition of the control of the composition of the control of the composition of the co the example is one of particular interest. The bricks are of light red colour and are soft handmade ones set with fine joints. carvings were executed in situ, irrespective of the joint courses. The sections of the mouldings add value to the general elevation of the portal.

"PEMBURY RIDGE," PEMBURY. KENT. Mr. W. HENRY WHITE, F.R.I.B.A., Architect.

Mr. II. Wood, the deputy city engineer of orwich, has received a commission as Norwich, has received a comm lieutenant in the Royal Engineers.

The new Technical College at Doncaster. opened last week, has cost £13,000, and was erected on the site of the old Vicarage from plans by Mr. W. P. Schofield, A.R.I.B.A., Park Row, Leeds. The contractors were Messrs. Paul Rhodes and Co., also of Leeds.

The Church of the Sacred Hearts, Talbot Road, Blackpool, was solemnly opened on Sunday week, after restoration at a cost of £4,000. Other improvements are the enlarge-24,000. Other improvements are the energy ment of the organ gallery, the division of the organ, and a new stained-glass window. The work has been carried out by Messrs, J. Fielding and Sons, of Blackpool.

# Currente Calamo.

Readers have been acquainted in notes on this page in past numbers of the circumstances with regard to the scandal that has arisen in connection with the contracts for the erection of the New Parliament Buildings for the province of Manitoba at Winniper, of which Mr. F. W. Simon, F.R.I.B.A., was the architect, and whose design was illustrated in our issue of September 22, 1912. As we intimated on this page in our issue of April 30 last a Royal Commission was then appointed to investigate the charges made by the Opposition, and on another page to-day will be found the Royal Commission's interim report. The charges are found to be substantially true, and there is said to have been frand and much overpayment since the contract was let to Thomas Kelly and Sons over three years ago. The overpayments amounted to \$701,093 59c. Unfavonrable inferences are drawn from the actions of G. D. Coldwell, J. H. Howden, Thomas Kelly, V. W. Horwood, Dr. R. M. Simpson, W. A. Elliott, M. G. Hook, and Harry Whitla, K.C. It will also be seen that the preliminary investigation of the charges against three ex-Cabinet Ministers commenced last Friday, and that work has been resumed under the direction of Mr. F. W. Simon.

A change with regard to the contract for the new head offices of the Metropolitan Water Board, in Rosebery Avenue, appears to be contemplated. On the agenda of the meeting held last Friday a Report of the General Purposes Committee appears as follows :- "At the special meeting of the Board held on August 27 last, we presented a report (Board Minutes, page 347) with reference to the contract for the erection of the new head offices in Rosebery Avenue, and recommended, for reasons stated, that notice should be given to determine the contract. Our recommendations were referred back with authority to take connsel's opinion or such other steps as might be necessary to enable us to present a further report. Since that occasion the building contractors and Messrs. Rice and Son, a well-known firm of London builders, have approached us with a suggestion that the contract should be transferred to that firm. If this were agreed to, Messrs. Rice and Son would at once assume control of the works, pay any sums due to the sub-contractors, remove charges on the existing contract, and reorganise the building contract so as to complete the structure within eighteen months from the date of transfer. As, however, Messrs. Rice and Son find that some of the prices in the bills of quantities are unremunerative in the conditions that now prevail and would, in fact, entail a loss, they stipulate that various sums amounting in the aggregate to £4,132 should be added to the contract price of £110,004. The fact that it has been considered desirable to submit the proposed transfer for our consideration confirms the view contained in our last report that the present arrangements are not working satisfactorily. It, therefore, being obvious that a rearrangement is desirable, we are advised by the architect that the Board could not in such circumstances have the building completed otherwise upon is favourable terms as the ones proposed. ınd, after a careful review of all the cirumstances, we recommend them for the Board's acceptance, subject to the immediate xecution by the parties concerned of a formal locument to be prepared by the Board's of campa 2n " amon; householders generally, sculptor and the President of the Royal

solicitor, which, amongs, other things, would contain a suitable indemnity by the new building confractors protecting the Board from claims made by the present contractors or persons claiming through them.

"The proposed addition to the contract price will still leave that sum under the amount, including mahogany, of the second lowest compet (we tender, viz , that of Mr J. Carmichael, in £116,082, and less than Messrs. Rice and Son's competitive tender of £117,659 8s. 8d We have made inquiries as to the status of Messis. Rice and Son, and find them to be a firm of high repute in the London building trade, their senior partner. Mr. F G. R.ce, being a past president of the London Master Builders. Association and president of the Institute of Builders. The Board now hold the sum of £6,040 in respect of retention moneys under the contract Under the terms of the proposed transfer. and subject to the satisfactory completion of the contract, this sum would ustimately become payable to Messrs. Rice and Son, but meanwhile, with additions thereto in respect of future work, would be retained by the Board as security against the assignees of the contract just as it has hitherto been against the present contractors. We have forwarded the necessary estimate to the Finance Committee, and recommend: 'That the estimate of £4,152, to be submitted by the Finance Committee, be approved; that, subject to the solicitor taking all necessary steps for the Board's protection, the Board do assent to the transfer to Messrs. Rice and Son of Messrs. Heath and Son's contract for the erection of the new head offices in Rosebery Avenue, E.C. subject to the terms set out in the foregoing report; and that the seal of the Board he affixed to all documents in the matter requiring the same.' The report of the Finance Committee is to the following effect: The Finance Committee, having considered in its financial bearings the above estimate, submit the same as chargeable to capital account " We are informed, on inquiry, that further consideration of the matter was postponed.

Numerous expedients are being devised by the clerks and surveyors to local authorities to meet the awkward situations evolved by the decision of the Local Government Board and the Treasury to cancel sanctions already granted for executing organtly needed huilding and engineering works. In several cases, notably the police station at Reigate and county conneil offices at Dundalk, the assessors' decisions had been adopted in competitions, in which many architects have fruitlessly expended much labour, time, and money in endeavouring to solve problems, and the successful man has the mortification of learning that the entire enterprise is abandoned "until after the war"; in many others contracts have been entered into with builders. These will involve the councils in considerable and absolutely unremunerative losses, and they will be well advised if they negotiate with the agarieved architects and contractors to make the best terms possible rather than sink more of the ratepayers' money in mitating and always unsatisfactory

The rise in rents in many towns is seriously pressing all Lousedachets. It is, of course, in no small dogres due to the shortage of houses, and, very slightly, to rising rates. Thes was emphasized had week at a meeting held in Manchester to inaugurate a " plan-

situata special comming and Mr. Mo is the ceretary of the Salfert Trades Council, decared emperitorly that is thorisands of cases rents have reen record to contach greater extent than is a removed by the inergy of the edge of the pound," he seek "an increase of a sering a week would cover the landler but the one of a house reado for 5 . Yes an inner every a hoise reaction of the anomalous very case the meaning means a return of 15s and the for about 3s of the anomalous to the control of the control of the control of the control of the rented at 11s of an increase of the control of t he mulmposed in a large sient whereas 3d would be soften. handbord." Thus, for an additional expedifferent and the state of the state of about 11s (6d. ) year of a tree, less than 52s, as personal of the cape Ligher rents. The has to be a member of he added, "that many new soller not shared in war b no -wages, and higher rents, added to the great wages, and nighter rents, added the tree greating increased cost of living, contact needed without much hardshap." It has, added, but the silent sufferers of the professional classes will get little redress while at Government stops building.

At a meeting of the Britley Purish Contactl last Wednesday, Mr. B. Bolam reported that he had been officially informed that a certain firm which was at present erecting large works in the township would in the near future be employing 6,000 workprople, for whom housing accommodation would have to be provided. A Local Government Board inspector had recently visited Birtley, and had stated that at least 500 houses would have to be built almost at once, as a commencement, No builder could think of building houses on a specualtive basis at the present time, as they cost 33 per cent, more than a year ago. He, therefore, moved that they ask the Chester-le-Street Rural District Council to build a reasonable number of houses, for which he had every reason to believe the Local Government Board would provide all nevessary facilities. Mr. A. S. Bolam, in supporting, said a Local Government B and inspector had been at Chester le-Street that day, and he had informed a representative of the Urban Conneil that the Local Government B and would favourably consider the question of lending money for the erection of 500 houses at Chester le Street for this purpose on favourable terms. The resolution was agreed to. So, if the application is granted, and the facts are truly stated, the ratepayers will have to pay the difference between the cost now and that for which, in all probability, private en terprise would have supplied the need had it not been for war and strikes.

The dispute about the Gladstene Memor al site at Elinburgh, to which we reported on this page in our issue of August II, seems still unsettled. At a previous meeting, the town council had agreed to offer a site at Saughton Gardens, but 118th works by a majority of 27 to 11, the more was disapproved of. The Lord Provess 1 in a Lovel that If the Pelmos Sees seed at been selected, with the statue foliagit marsis Princes Street, it would have been been mously accepted. The vey, or in a half disc everything they possibly could. It did to He with the town council to say where the statue was to be put. They had given a site each time it had been asked, and he was quite sure the citizens free I them from any blame. It was entirely the fault of the

s A man, that this statue had big savere is used of an urban site. He and a great dear of trouble in connecthe matter, and he miged them s i Ballie Rose asked where some vas just now, and how much it state cay for lying where it was Led Privest replied that the statue. 12 September of Sr M Matchell ers on was aya g in the Caledonian Rad a year, encludy packed away. No doubt amatter would have to pay demun a reges It had been there for say w The Town Clerk said the or enter to decide was simply als upperval of the unusues.

Ma Leod asked if it was not Gladstee Committee would Street with the Lord Provost: very superative on that. Mr Lorie Mr. Lord So that we are really deter er to statue is to be placed in Programme Treasurer M. Michael asked in the source at a fact that since the district of the resont on the Memorial mustbe of not and rejected the Princes or a opted the Saughton site, id of pumin sated that fact to the Lord of Committee. The Lord Provost: That To asurer M'Michael: Then all we As to 1 - to approve or disapprove of And the majority, as before - Policy amptly disapproved.

So tobers must really be careful. Themas Ress, architect, 6, Cobing Place, Eduleirgh, appeared before Sherift Armour Hannay at Cupar last week, charged with having made a sketch at Burntisland showing Burn't san 't dal harbour, the Firth of Forth. and the vessels lying in the harbour. The Fiscal said accused was a very respectable man, and there was no suggestion that he had made the sketch with any ulterior motive. The seemed to have a great fancy for sketching old castles. Accused said it was purely the beauty of the scene which he was sketching. It was not an architectural drawing. He asked that the sketch, which had heen retained by the police, should be retirn-lichim, as some of the details were the Royal Society for the Preof value : setvation i Ancient Monuments. The Sheriff said is was necessary that a permit should be taken out. One never knew when sket hes might be of value. He had seen that the German aviators flying over the trust of Finand had been much aided by sketches which the Kaiser had made when one a visit to the Tsur. He imposed a modifield hise of 5s , and directed that the sketch should be retirned to accused

By a periter's error last week it was stated on the page that the deposit asked of competitive in the York town planning scheme was ten guineas. It should have been the gainers

At a strate set of a St. Goorg I. Garmon C. at When the rest Strates incorring. Bright of General T. F. Bushe involved two as a range plans the set of certain to the common of the late of near Common ording the first, and the other common ording the first, and versary of the deduction of the course.

The first of the Corporation housing scheme, so that the set 114 houses projected as proceed as a first property of the W. Harput, the city engineer, is soon as the contact of the many schemes, but however, and the contact of the second partial than planning schemes, but however, it is soon as a first and dependent upon a boundary of the contact of

# THE PERCENTAGE OF WATER IN CONCRETE.

In a paper read before the Connecticut Society of Engineers, results are given of a sories of careful tests made to determine the effect of varying the percentage of water in concrete

Although the percentage of water has d rect bearing muon the strength of concrete, at is the exception rather than the rule that the engineer concerns himself with the quesson of mixing beyond seeing that the proper proportions of sand, stone, and cement are used and the contractor is generally allowed to mix these materials as he thinks fit preparing the specimens for his tests, author found it necssary, when making mix of water, to increase the proportions 10 per cent, in order to fill the moulds. This in-dicates an increase in density which was obsamed at a loss of strength. However, in some cases this as highly desirable. Often tained at a loss of strength. bulk and impermeability are the two requisite features. In reinforced concrete structures a moderately wet mixture is far more practhan a dry one; but it must not be facotten that the use of wet mixures increases the cost of materials. An increase in density means a corresponding increase in raw materials. The additional water weakens the concrete, and, therefore, a richer mix ture or lower unit stresses must be used. The corner is preferable, for the beams and columns in concrete building are always heavier chan the corresponding members of steel or wooden structures. If a wet mix ture is used, the engineer should be cautious in permitting the removal of the forms at an early date. In some of the tests the wet mixings were very slow to develop their strength. The use of such consistencies in would necessitate extreme care. It might be a month or more before the forms could be struck with any security. The question of consistency is not altogether a laboratory question. The increased cost of materials due to the use of wet mixtures may balanced by the saving in more than placing; but the engineer should bear mind that consistency has a direct relation to strength, and if he permits a wet mixture he should provide the same in his design.

# SHRINKAGE AND TIME EFFECTS IN REINFORCED CONCRETE.

In the extensive investigations of the properties and behaviour of reinforced concrete that have been made in recent years very little has been done in establishing the effects of loads sustained for long periods of time. This seems the more remarkable in view of the fact that a progressive sagging or cracking has been noticed in many structures. That these changes have not received more attention in the past is probably due to the suspicion of poor construction or Inadequate design that is usually raised at the suggestion of such behaviour, a suspicion unfortunately too often justified.

In the tests cited in a bulletin of the University of Minnesota it has been found that certain changes do take place that are chargeable neither to poor construction nor inadequate design, but rather to the nature of the material itself-its tendency to shrink and yield under load. It is in recognition of the importance of these changes that this bulletin is issued; for, while no attempt is made even to suggest a solution to the problems presented by these shrinkage and time it is felt that the facts presented are oftents of sufficient importance to warrant their pub lication. With materials and mixtures used in these tests it is safe to predict a shrinkage of from three-fourths to one inch or more in 100 ft, when exposed to the ordi-nary dry air of a heated building. The we'ding of the concrete under compressive stress with time, a phenomenon similar to the yielding of ductile metals when stressed beyond the yield point, is greater as the unit stress is greater and seems to go on indefinitely. In these tests the deformation due to yielding was found to be from three

to five times that produced immediately

upon the application of the load.

A few of the possible results that may be looked for where these twin changes are in progress are suggested. The production of cracks in floors, ceilings, and partitions, even though in no sense indicating a structural weakness, is an undesirable feature. And in certain places with some types of structures or details cracks might leave the reinforcement accessible to moisture and thus prove a source of danger. Sagging of the structural framework may cause the hending of doors in positions, a feature that is both expensive and annoying. The tilting of columns by the inequal shrinkage in the different floors might be a source of high bending moments and column stress. But of far more importance than these may be mentioned the two following possible effects, both of which might in certain instance, be of serious consequence:—

First, the continued yielding of the apper fibres of a beam, coupled with the gradual breaking down of the concrete in tension, may result in a progressive destruction of the bond from the centre toward the supports, similar to that occurring with the progressive loading of a beam as shown by Mr. D. A. Abrams (Bulletin 71, University of Illinois). Also the drying-out incident to the large shrinkage movement may assist in this destruction of the bond.

Second, the possibility of high stresses in

Second, the possibility of high stresses in the longitudinal steel of compression members seems to be the most important conclusion to be drawn from these tests. The time yielding of the concrete under stress, combined with the excessive shortening due to shrinkage, may result in deformations from five to fifteen times those expected from the ordinary calculations. In columns of the ordinary ratio of vertical steel in which no allowance has been made for spirals, the resulting steel stress is probably well within the elastic limit, but in those columns designed on the assumption of large loads being carried by the hooping the steel stresses may approach dangerously near the yield point.

Mr. Lionel Williams, of Torquay, has been appointed by the urban district council of Buckfastleigh to the position of surveyor and sanitary inspector.

In the City of London Sheriff's Court on Wednesday, Messrs, T. and A. W. Norris, builders and decorators, Old Street, E.C., were awarded £75 damages against Mr. T. W. Hancock, of Berwick Villa, Langdale Road, Hove, in respect of certain statements which, it was alleged, reflected on the plaintiff's business probity.

A number of paving-stones have arrived at Middlesbrough for shipment to America to be used in repairing the portico at George Washington's old home at Mount Vernon. A committee of ladies from nearly every State in the Union have undertaken to maintain the home of the first President of the Republic, and it was their desire to have the restoration earried out with stones from the quarry at Whitehaven that supplied the original building.

Hutton Castle, Berwickshire, and adjoining properties belonging to Lord Tweedmouth, were offered for sale in Edinburgh on Wednesday by Messrs, Curtis and Henson, of London. The property is 4,615 acres in extent and the rental is £5,006. There was no purchaser for the property as a whole, and it was then offered in six lots. The first lot, comprising Hutton Castle and estate of 162 acres, was sold for £23,000, the name of the purchaser not being disclosed.

An institute provided by the Young Men's Christian Association for the benefit of the men of the Royal Navy and of those employed in the service of the Government at the Royah Naval Base was opened on Friday by Lady Beatty, wife of Vices Admiral Sir David Beatty. The institute is of temporary character, and will be replaced later on by a more substantial building. It has been erected to plans by Licatenant Stewart Kaye, Dunfermline, by Messrs, J. and R. Watson, Edinburgh. The main hall is 135 ft. by 30 ft., and there is a platform at the west end. The building is of timber framing, with weather-boarding outside and lined inside, with red rubberoid roofing. Heating is provided for by the installation of authracite stoves, and the lighting is by electricity.

# Building Intelligence.

DANYCOED.—The Red Cross Hospital, Danycoed, near Swansca, is being prepared for the reception of wounded soldiers. The residence is being adapted for this purpose, and will accommodate, with the addition of open-air wards, sixty five patients. The architect for this work Glendinning Moxham, F.R.I.B.A. Swansea, who has made a special feature in connection with this Red Cross hospital. The outside wards are being adapted either as open-air wards or closed-in wards at a moment's notice, and it is believed that when these wards are complete they will form a model for other military Red Cross hospitals. The work generally is being carried out by Messrs. J. and F. Weaver, contractors.

GALASHIELS .- A well-equipped range of public baths and a public park and children's playground have been presented to the burgh by Mr. and Mrs. A. A. Dickson. The baths (of which Mr. Jehn Hall is the architect) have a trontage to Wilderhaugh of about 80 ft., and are faced with rock-faced red freestone, with a rusticated entrance doorway. The rest of the building is of brick, rough east, with cement. In the plunge bathroom there are six plungs baths, and there is also a spray bathroom with footbath sprays. The swimming pond is situated in a hall 92 it, by 53 ft., the pond itself measuring 75 ft. by 35 ft., and varying in depth from 7 ft. to 3 ft. All the usual appliances are provided-dress ing-boxes, diving ladders, trapeze-ring, springboards, water-shute, polo-posts, etc., the water being steam-heated before entering the pond The other accommodation includes a laundry. with washing-machine, hydro extractor, and drying closets, and office accommodation for the staff. The playground and park, which extend to an acre, are being laid out with a shelter, rockeries, shrubl eries, and with scats, swings, and a seaside sand-pit.

NEWCASTLE-ON-TVNE.—On Saturday Bishop Ormsby dedicated the recent additions to St. Aidan's Church, Newcastle, which include the north and south porches and the lower portion of the tower, forming a bapwhich is carried up to the level of the ringing room floor. A five-light window at the west end and a smaller window on the south side of the tower greatly add to the efficient lightline. the efficient lighting of the church. The new work is in conformity with the rest of the church, of 15th Century type, built with hammer-dressed stone throughout, with ashlar dressings. The church was commenced ashlar dressings. The church was commenced in 1838, and it was dedicated by Bishop Wilberforce on December 15, 1839. The recent work has been carried out in accordance with the original design of the late Mr. W. S. Hicks by the present firm of Messrs. Hicks and Charlewood, architects, of Newcastle. The builder is Mr. G. H. Mauchlen, also of Newcastle.

SHREWSBURY,-At the last meeting of Shrewsbury Town Council the Housing Committee reported on the cost of the Wingfield Gardens housing scheme, and also submitted a new housing scheme to provide 100 houses for the working classes of the borough. The total cost of the first scheme, which provided sixty-three houses, and of which Mr. A. E. Williams was the architect, was £13,616, and, owing to the adoption of the instalment system of repayment, there was a deficiency on the first year of £114. The new scheme submitted is in Castle Fields, and will connect up several streets already in existence. Plans and estimated the streets already in existence. mates prepared by the borough engineer, Mr. A. W. Ward, were submitted by the committee. Provision is made for houses rented at from 4s. 6d. to 7s. 6d. per week. The total cost, including land and sewerage, is set down at £22,030, and it is estimated that there will be a total annual income of £1,300, and after meeting all annual payments there will be a credit balance of £26 7s. 3d. Alderman Deakin, in moving the adoption of the report, said there was very great shortage of houses in the town. Some of the results of that shortage were that rents had gone up, and

hundreds or work at more ere paying more then a quarter of there eggs in tent, and others were living in an amitary dwellings. After some criticism the report was adopted, 

#### LEGAL INTELLIGENCE.

E. J. JONES TRADING AS JONES BROS., OF KENSINGTON A meeting of creditors of Mr. Edward Jones, builder, of Oakwood Court, Kensington, who had traded as Jones Bros., was held at the Court of Bankruptey on September 15. The grees liabilities were stated to be £368,127, and the assets, as valued by the debtor, £65,624 Failure is ascribed to pessure by mortgagers and inability to realise. Mr. F. S. Salaman was appointed trustee. was appointed unstee.

The late Mr. Mel arrice Edward Futt, of Oxford Road, Rending, builder and contractor, h-fr £25,789.

N. Neidels at M. P. S. F. of Bradford, consulting engineer to the lower

The death is announced, at 0 - age of error five, of Mr. Frederick Smardhead ARWS retired), who in the latter half of the retienth century was a well-known painted of figure pactures. He was a frequent synchology to the Royal Academy and the Grosvener G. kery. By a painting in oils he is represented to the Mainchest or Art Gilbery and by die to be the Royal Comwall Institute at Trunco.

At the last meeting of the Irvine and District At the last meeting of the kryme and District Water Board at Kilwinning a letter was read from the Scottish Command agreeing to the terms offered by the Board for a water super to Gailes Camp, and it was remitted to the manager to arrange for the work bettig carrier out at once. The Public Works Lean Board have saretioned a loan of £50,770 to meet the cost of the new filtering plant installation of the pipe from Monnoch to the filters.

the fillowing wash is recommended as effortive waterproofing for eisterns, silos and similar structures. A stock solution is made of 1 ke, 5 lbs alum, and 2 quarts of water. A silos addition is added to a bucket of vitor and 10 lbs, of cement, making a paint ike row time to be applied with a brush. This is a modification of the Sylvester process and depends on the production with a brush in the poles of the concrete of insoluble alum solution of the This is a modification with a brush in the poles of the concrete of insoluble alum solutions.

There has been erected in the "tile" s, is cometery of Lyme Regis an imposite member alto the vicious of the crew of the locally. Formulable, which was tornel of the locally man submarine last January. The memoral, which takes the form of a granite Celtic Cross on three massive bases, stands immediately over the graves of six of the nine men who died from exposure as the result of the gale in which they were buffeted about in their boat for twenty hours after leaving the battleship. There has been erected in the "tile

## Our Office Cable.

At the last meeting of the City Council of B: stella discusse in arcse on a proposition by a member to determine, on December 31, the a memoer to determine, on December 51, the appointment of Mr. Girdlestone, for nearly 1 rty years the docks engineer, as consultative engineer to the Docks Committee, at 275 lpci annum. Mr. Girdlestone, the mover aversel, and is thing to do, as the present docks manager was quite capable to perform has dather; to close the engagement at the end of this year would be, he contended, too generous, as Mr. Girdlestone was appointed in 1878 at \$5.8% and for many years received £1.20% ps. annum. In the course of the debate it was explained that when Mr. Girdlestone received his appointment as part of a scheme if reconstruction recommended by a special committee, he was told that while the committee or the Council had no right to make a life appointment, he might accept the assurance that it was intended to be a lasting one. There were strong complaints that this fact was not disclosed to the Council when the appointment was made, and the explanation did not alter the attitude of many members towards the resolution. An amendment to refer the matter to the Docks Committee to refer the matter to the position was defeated, and when the tesolution was put to the vote it was defeated by the narrow majority of three, the numbers being 21 for and 24

At a recent meeting of the Committee Management of the Dundee Free Library Mr. A. B. Crichton said it was proposed to have an exhibition of the prints secured in connection with the photographic survey which has been completed by the Dundee and East of Scotland Photographic Associa tion of Dandee at the beginning of the twentieth century. The town council, he explained, had advanced about £200 to the plained, had advanced about \$250 to the members of the association who had made the survey. Glasgow was forming such a collection, but they were paying thousands of pounds for it. The Dundee collection of pounds for it. The Dundee collection consisted of about 2,000 prints in duplicate. It was intended to bind the photographs into volumes, one set to be kept in the Charter Room of the Town House and the other in be kept in the Charter  $\mathrm{Room}_{\cdot}$ the Albert Institute. The committee agreed to grant the use of one of the galleries for the free exhibition of the collection, which in years to come will possess great historical

The prospectus of the Manchester Muni-cipal 8 hool of Technology, giving particulars the part or time courses in municipal and sanitary engineering, architecture, and and sanitary engineering, architecture, and building for the ensuing session, has just been published. The principal of the school is Mr. J. C. Maxwell Garnett, M.A., and the vice-principal Mr. J. P. Wrapson, A.B.C.S.L. B.A. M.Sc., and the secretary and registrar Mr. H. Williams, Mr. J. Radcliffe, M.Sc., is the head of the municipal came, M.Sc., is the head of the municipal and sanitary eigeneeting department. Mr. Archibald C. Dierge, M.A., A.R.L.B.A., is the professor of architecture, Mr. J. Lindsay Grant the letter in architecture, and Mr. W. Leessee, M.S.A., the lecturer in build ite constructor. The various courses begin on Monday work, the 27th inst.

The Monobla Tro-Pross, published at Winnipez on August 30, states that a refund of \$9.50 between was received two days not associated by Millian Reportment of iso ( ) A Mandoba Department of Webs for overpayments to contractors made by the late provincial government. An in-testization by the present Minister of Public Works have the accounts for the Agricultural Congression of the estates committee recommended that the corporation should contribute £150 to the purchase of a house in Bootham to expect a round tower on the Abbey wall, probabilities a second for \$3.370 60 cents, and a place of the purchase of cost, and on condition that the property be conveyed to the corporation free of cost, and on condition that they be not requested to pull it that they be not requested to pull it that they be not requested to pull it down for five years, the corporation meanwhile receiving the rents. Companion of the contractors, they have always that in at least one case they declife the extension of the property be conveyed to the planning scheme across of land, of the property of the property of the planning scheme across of land, of the property of the property of the planning scheme across of land, of the property of the property of the planning scheme across of land, of the property of the property of the property of the planning scheme across of land, of the property of the property of the property of the scheme across of land, of the property of the property of the property of the scheme across of land, of the property of the prope

another bill against the Government on a second contract still unsettled.

The city of Winnipeg has just adopted a by-law limiting the height of buildings. Its provisions were formulated by a joint comprovisions were formulated by a joint committee representing a number of organisations, architectural, town planning, real estate, and building, and it was passed without opposition from any quarter. It provides that no building shall exceed one and three towards towards the width of the street, nor quarters times the width of the street, nor in any case be more than 198 ft. high, nor contain more than twelve stories. Cornices, tools and parapets are included in these heights, but the roof may be covered with a roof garden, and pent houses, etc., one story high, set back 20 ft, from the street, may cover 25 per cent, of the roof area. Towers, with restrictions as to area and position, may be 300 tt, high. Winnipeg has three main streets, each 132 ft, wide. On these the amulation of twelve stories would make the ordinary commercial building about 165 ft. high, while for department stores, requiring high ceilings, 198 ft, is allowed for twelve stories, which is only one and one-half times the width of the street. Practically all other streets are 60 ft. wide, so that the rule would give a limit of height of 115 ft. 6 in., or about

A report has just been issued by the United A report has just been issued by the United States Geological Survey showing that the value of brick and tile produced in the United States during the year 1914 was less by \$13,707.935 than the production of 1913, a falling off at the rate of nearly 10 per cent, in one year. The value of common brick production in 1914, above a less are converted. in one year. The value of common brick produced in 1914 shows a loss, as compared to 1913, of \$6,365.233, or more than 11 per cent, in one year. It was the worst year in the recorded history of the department, the records going back to 1903 inclusive. In addition to the drop in the quantity produced, there was a drop in price—the average falling from \$6.20 per thousand in 1913 to 56.12 per thousand in 1914. Face-brick production fell off in value to the extent of about \$324,515 as against 1913. This is a loss of only 3 per cent., and shows that face-brick only 5 per cent, and shows that face-brick withstood the pressure of competition and hard times better than its less aristocratic brother-in-clay. Paving-brick is the only important clay product that increased its output in 1914, the gain being \$362,345, or a little less than 5 per cent, better than 1913. Fire-brick sustained a loss of \$4,199,575. The value of the 1914 output was \$16,427,547, while that of 1913 was \$20,627,122. There will be that of 1913 was \$20,627,122. while that of 1913 was \$20,627,122. This is close to 2) per cent. The diminution is due to the almost complete stagnation of the iron and steel industries during the early months in the year.

11 Fitzmaurice, the British Vice-Consul at Bangkok, reports that the bulk of the cement now imported into Siam comes from Denmark and French Indo-China. Recently, however, a firm at Bangsue, near Banglook, commenced the manufacture of cement, and the annual output of this new works is estimated at 120,000 barrels, or 20,000,000 kilogs, (about 44,092,000 lb.), a quantity very nearly equal to the average importation of cement into Bangkok during the last five years. The British Vice-Consul adds that if this local factory is able to pro-The British Vice-Consul duce the quantity and quality of coment its promoters expect (as to which some doubt is expressed, and at the same time to compete in price with the cheap cement now imported non French Indo-China, the importation of cement into Siam may practically cease to

At the last meeting of the York City Council the estates committee recommended that

would cost another £150 to build up the gable of the adjoining house. That would mean that they would have to spend £300. Alderman Birch seconded. He did not think the house was worth £400, and it was built on land that had probably been pinched. The amendment was defeated by 26 votes to 18, and eventually a picturesque circular tower will be revealed to view.

#### MEETINGS FOR THE ENSUING WEEK

THURSDAY AND FRIDAY.—Iron and Steel Institute,
Autumn Meeting at the Institution
of Civil Engineers, Great George
Street, S.W. 10.30 a.m.
FRIDAY (Sept. 24).—Glasgow Architectural Crafts-

men's Society. Presidential Address by Robert Moon Wright, College Buildings, Glasgow. 7.45 p.m.

Buildings, Glasgow, 7.45 p.m.

Town Planning Institute, Opening Address by Raymond Unwin, F.R.I.B.A., Presidure, 92, Victoria Street, Westminster, 8 p.m.

SMURDAY.—Institution of Municipal and County Engineers, South-Eastern District Meeting at Bognor, Paper on "Bogner Municipal Undertakings," by Oswald A. Bridges, Surveyor, 11.30

a.m. Visits to the various works (new housing scheme, new sea-defence scheme, site of new sewage works, hospital and underground convenience) described in the paper, 3 p.m.

Royal Photographic Society's Exhibition, "Some Village Homes and Cots," by Arthur E. Morton, Suffolk Street Galleries, Haymarket, S.W. s.30 p.m.

Tuesday (Sept. 28).—Royal Photographic Society's

8.30 p.m. .

1. 28)—Royal Photographic Society's Exhibition. "Mont S. Michel, the Abbey of the Archangel and its Seagirt Town," by H. W. Fincham, Suffolk Street Galleries, Haymarket, S.W. 8.30 p.m. TUESDAY (Sept

Mr. Andrew Warren, the borough surveyor of Totnes, having been refused permission to obst by the corporation, has accepted a commission in the Territorial Cadet Corps at Totnes.

Mr. George Ley Pearce Butler has died at his residence, Oaklands, Lichfield Road, Four Oaks, in his 79th year. Mr. Butler was a Darlaston nan, and formerly carried on an extensive business as builder and contractor.

A new pavilion, erected for the accommoda-A new pavilion, erected for the accommodation of scarlet fever patients at the burgh hospital. Motherwell, N.B., at a cost of about £3,600, was formally opened last week. It consists of two wards of ten and twelve beds respectively, with five one-bed side rooms—in all, twenty-seven beds with a space of 2,000 cubic feet for each. The walls have been constructed of carrugated iron on a brick foundation in order to minimise the risk from underground workings.

From returns obtained by the American Rail-From returns obtained by the American Railway Bridge and Building Association, it appears that of fifty-four leading railways in the United States and Canada only thirteen have not made use of reinforced concrete. The unitend of the forty-one systems on which this insterial is employed amounts to 138,784 miles, the reinforced concrete structures in use comprising arch bridges, trestle bridges, arch and box culverts, hollow and solid bridge abutments, bridge piers, decking slabs, retaining walls, and city subways.

One of the recent Canadian developments in the way of builders' hardware is a screwless the way of builders' hardware is a screwless mage, which has two steel projections on each cond. On the end next to the door stop there is a straight steel projection that enters the wood, and on the other end of the hinge there is a clamp projection that enters the door exising. These projections or hooks counteract and offer the same resisting and holding force that the screw offers to the hinges. Besides doing away with the use of nails and screws, the statement is made that it gives the hinge he statement is made that it gives the hinge much neater appearance than those of ordinary construction.

At Grimsby Mr. George L. Pepler, spector of the Local Government Board, has held an inquiry into an application by the rural held an inquiry into an application by the rural district council for sanction to prepare a town-planning scheme to deal with an area of 5,865 acres of land, of which 1,935 acres are under the jurisdiction of the Glanford Brigg Rural District Council. The Earl of Yarborough, the principal landowner affected (2,359 acres), regards the scheme as essential for the proper development of the place. The town clerk of Grimsby said that the corporation was most concerned that proper and adequate road communication should be made between Grimsby and Immingham.

#### TO CORRESPONDENTS.

We do not hold ourselves responsible for the opinious of our correspondents. All communications should be drawn up as briefly as possible, as there are many elamants upon the space allotted to correspondents.

correspondents.

It is particularly requested that all drawings and all communications respecting illustrations or literary matter, books for review, etc., should be addressed to the Editor of the BUIDING NEWS, Effingham House, I. Arundd Street, Strand, W.C., and not to members of the staff by name. Delay is not infrequently otherwise caused. All drawings and other communications are sent at contributions' risks, and the Editor will not undertake to pay for, or be hable for, unsought contributions.

for, unsought contributions.

\*\*\*Thrawings of selected competition designs, important public and private buildings, details of old and new work, and good sketches are always welcome, and for such no charge is made for insertion of more commonplace subjects, small churches, chapels, houses, etc. we have usually far more sont than we can insert, but are glad to do so when space permats, on mutually advantageous terms, which may be ascertained on application.

When favouring us with drawings or photographs, architects are asked kindly to state how long the building has been creeted. It does nother them nor us much accod to illustrate buildings which have been some time executed, except under special circumstances. stances.

about this matter, as all will agree who have visited the devastated districts in London everybody knows of but nobody must mention. The first idea that presents itself in the way of protection against aerial bombs takes the form of herizontal strata of steel netting. In diagram Fig. 1 are

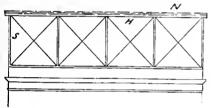

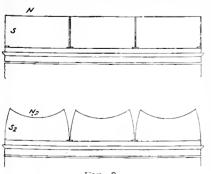

Fig. 1.

stanchions, S, carrying beams. H, that support several layers of steel lattice, N. A suitable bearing upon copings, etc., must be found for a sole-plate, the stanchions riveted and bolted up, with, say, dia-gonal strutting as indicated. The netting offers a more or less elastic reception to a falling body. The possible methods of resisting impact seem to resolve themselves into the armour-plate method, the elastic netting, and the earthworks system, as used in defence against gun and rifle. To meet mere impact the principle of elastic reception seems sound. A man may jump from the roof of the Crystal Palace into a net—we have ourselves witnessed the feat—and receive no hurt. The stanchions rig. 1 are assumed to be rigid, and the netting firmly held, but this latter might conceivably be loosely held and so offer an

increased "give" to any falling mass; and the idea suggests itself (Fig. 2) that in place of rigid stanchions such might be arranged to yield somewhat, as diagrammatically indicated, so that the original position of stanchions S, holding netting N, might on impacting force assume posi-

... 550 Let of Competitions Open ... 567 List of Tenders Open THE PROTECTION OF BUILDINGS trons such as S. N. Somewhat similarly, the netting N. Fig. 3, stretched over the secretarily time to think seriously rollers, R.R. in the frame, F. is kept taut by springs, SS, and on impact of mass at No the netting gives much as in the case of the acrobat jumping from a height into a rope net. Again, following the elastic idea, in Fig. 3, the assumed bomb-proof platform, B, is directly supported by helical springs. If H, descending with gradually increased resistance, as in licated at B., on impact of fulling mass. In this last example of elastic reception for a falling body the impact is met in a manner very similar to that in which recoil

forces are absorbed in modern guns. The next idea is associated with the principle on which military earthworks are constructed. The employment of earth or sand in sufficient layer is an obvious recourse, and must be esteemed one of the most practical. The projectile is arrested by a braking action, gradually—if we magnify infinitesimals for easier mental conception of what occurs per short time

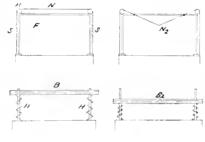

FIG. 3.

interval—compacting the earth and in part lesing energy by conversion into vibration and agitation among earthy particles. Fig 4 shows two rews of sand bags. S. supported by strong steel mesh or netting, N If the top of a building has many and varied excres rences, as suggested in the diagram, such a bomb-resisting platform would need to be raised up on stanchions, much as indicated, finding suitable bearing on copings, etc., and, in this case, a considerable weight of sand would have to be provided for. stanchions are secured to suitable longitudinal bearers, or sole plates, and diagonally strutted, with beams care suitable strong steel mesh or lattice. beams carrying

However interesting it may be to specilate or special clustic systems of receiving falling bodies, such an arrangement ing falling bodies, such an irrangement as sketched in diagram Fig. 4 strikes one as practical. In providing such a protective covering for a building, the points of support for stanchions would have to be carefully selected, and the whole designed to support the dead load of sand, etc., and an assumed force.

of impact. The stanchions, plates, beams, etc., would be riveted and helted up so as to form a suitable framing to receive one or more layers of strong steel lattice.
On these general lines Fig. 5 is a sug-

gestion for a bomb-protecting covering for a theatre. Stanchions are carried on suitable sole-plates on the copings, etc.,

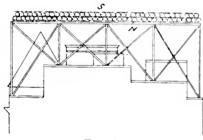

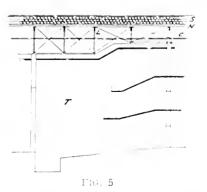

FIG. 4.

and lattice girders, L. suggest themselves to bridge over at right angles to the line of section as taken to represent, in diagram, the theatre auditorium, T. The girders and beams, it is suggested, would uphold one or more layers of stout steel netting, N, to carry a sufficient depth of sandbag defence, S, against impact. Sand is a cheap material to provide for the purpose. At somewhat greater cest, but well repaid by its many advantages, we should suggest slag-wood, the fire-resisting product of waste from blast furnaces. Quite incombustible, it presents a means of resisting fire outbreak. Where saidbags are provided for receiving impact, they should have some adequate protection from rain, in order that the material may not be washed away. Although in the sketches shown in Figs 4 and 5 the

s, we, used, it r that the energy-absorbing a sort an process le inv lved

the tracker have reviewed and determined all sails at special devices for mg. Side the proof platforms, it would want to the most practical idea is to simplest; and this seems to be acceptant to suitable steel posts. and this supported a layer of steel tottings upon which rests the slag-wor er sail is defence. In arranging for so, help to two roof overing, the first release to ascertain the points leave a carrying the plants are the the carrying the platform, and as possible distribute the y means of careful placing of we get by means of careful placify of satural streets of a part 2 of satural streets in must be absolutely to reserve must be as nearly to produce as possible and, in passing, the idea of an matic water spray or "sprinklers," as used to too quenching installations. might prive useful, any impact up in the plact rin at one crusing with to be distributed freely over the bomb resisting straing, and, assuming a partial supture i the first line of defence, a further layer r layers of stee lattice might form a kind of subsidiary debas catcher. Where a strong concrete flat root exists at suggests assect that such maght be covered deeply a sand or s'agewell and some way alove this possibly, a plain but strong stratum if s'el meshing. If we accept the principle of earthworks defence, as sisted by a measure of elasticity, as the simplest, in a suitable, and most effective means it arresting an acrial bomb. resisting explosive force, and quenching possible fire atbreak, the mere protection against impact is a question for expects who would be able to lay down the need ful strength and depth and details of pro-tession in the general assumption of a mass is certain assumed weight falling under the constant accelerating force of gravity is r an assumed number of seconds From these data an estimate of the needful strength in the steel construction and nott nice all be made.

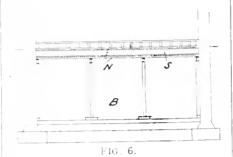

Ender this general system of bomb-proofing buildings, the standhion constructhen would estrong and rigid, well field, stayed, and signification it seems essential that the base supporting the slag-wool or and should hold intage under any impaisive force that might be comnumicated to the beams by way of the strata of the soul - and fire-resisting material. That the platform itself, carrying the netting and the fireproof energy-absorbing material, might be sustained by some form of clastic straints seems a possible improvement; but it would appear esential that the main steel framework, necessary, no doubt, as a rule, to carry the bomb proof platferm above the various upper features of a building, should be of such strength as to remain intact under all stress and circumstance. It is conceivable, possibly, that a defence might be designed to suffer, designedly, a certain distorion the partial wrecking of the defence saying the object to be defended. A bicyclist, having a "spill," and anxiously examining his machine for damage, may take heart if he discovers that the handle-bar is turned round in its which the an eventuality generally means no damage to the bicyclet for the reason that the force of impact is absorted in the work of turning round the harlf our against a considerable friction. tional resistance. Again, as bearing upon the same ilea some years back a tional paistance. transference.

The individual is advised to resort to the tasement. He might reinforce his the rasement. He might reinforce his basement premises. Fig. 6 shows a stratum of slag-wool, S, between light neurica. N, and held up by one or more livers of strong steel lattice, sustained by sina he stall joists and stanchions wedged

up from the asement floor, B; and, in Fig. 7, we are thinking of a fre-preof thear courtain. S. unrolled from drim D. over roller, R. and shielding a whole hous-front, or over windows, as 5; but musmuch as brick walls stop scattered deans, it seems to result that any nervous houseowner might put isolated window servins, S. as protecting vital parts, and effect all that any such general curtain as a might accomplish. After reviewing the various theories above put forward, it would seem that all that might be necessary can be accomplished with slag-wool and steel netting. Discarding as not obviously adaptable or practical purely elastic means of bomb-catching, we arrive at the conclusion that stout steel framings carrying strong steel lattice covered with slag-wood are practical means of protection. We need the right kind of steel

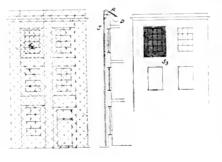

FIG. 7.

netting and the right kind of slag-wool, a material hable to variation in quality. The first requisite is that it should absolutely from combustible elements McNeill's slag-wool is a suitable material of the highest repute, perfectly incombustible, and peculiarly adapted for the The slag-wool is lightly present duty. compacted and sustained over voids by very strong steel lattice. From the suspended steel netting we gain elasticity; from the slag-wool that condensing and packing action characteristic of bullet-Stopping in earth; so that the combination is most excellently suited for the reception and absorption of impulsive force while, moreover, slag-wool is the bestknown protection against fire and heat ticansference.

DUTCH PHOTOGRAPHS CAMERA CLUB.

A select and very interesting collection or photographs by members of the Netherlandsche Chub, brought together by the secretary, Mr. F. L. Verster, of Amsterdam, is on view at the Camera Club, 17, John Street, Adelphi, W.C. The subjects are varied-ill-lighted courtyards. Old Amsterdam (no fewer than seven exhibits are shown under this title), peasant girls and women with white headdresses and ample petticoats and skirts, maids at work in scrupulously clean kitchens, tulips and roses, farmyards, canals and fields, all provide topics. One of the best pictures is No. 3, a gum bichromate by J. Zeegers, a courtyard opening into a narrow line in Amsterdam, which has the effect of a fine photogravure. No. 1. "Veere," shows a fourteenth-century village church with stumpy western tower finished with a flat cupola; in front of this is an irregular line of grey cottages, and on the common in the foreground are a woman and children, their faces turned from the camera in natural attitudes. "The Shepherdess," No. 4. by Adrian Boer, is a woman with a couple of milch goats in an avenue reminiscent of Hobbema's masterpiece in Trafalgar Square. The same artist photographer shows some clever gam prints of rural landscapes in Nos. 12, 14 and 16. Rembrandtesque effects of illumination of a single feature in an Amsterdam street by a street gas-lamp are obtained by J. Huysen in Nos. 9 and 10, who dexterously manages to evade the technical difficulty of the intense glare of newly fallen snow on readways and roofs in his No. 5. "A Dutch Village. A well-composed picture is "Refugees." No. 15, a gum print by 1. S. Weinberg. Crouching beside a rvined house in the rain a woman tightly holds her child, while far to the right, across a desolate flat landscape, is seen the tower of a village church. A similar subject has been selected by H. Berssenbrugge in "Brabant." Here the velvet-like texture of the brickwork in the cottage sets off the impressionist character of the fields to the right. Of the three costume portraits by R. Polak. Nos. 20, 21 and 22. the best is the first-named, the head of a woman wearing an elaborate white linen cap and gophered ruff of Elizabethan dimensions, and pearl pendant. Two bromoils of "Bruges," by J. Huysen, Nos. 27 and 44, give unfamiliar aspects of the city, and an attractive bromoil by B. Zweers, No. 31, one of two in Rome by this photographer, is a felicitous rendering of the "Porta Maggiore." Of the kitchen interiors by G. C. Kooyker, No. 39. a servant girl ironing, is the best; near by is "Washing Day," No. 34, by A. B. Slier, who, in No. 35. "Old Amersfoort," makes a taking picture of the church steeple of that stagnant old-world town on the Eem. Among the still life photographs, each as direct, clear and well-defined as the drawings in a botani-cal guide, are "Double Tulips," No. 2, cal guide, are "Double Tulips," No. 2, by J. Zeegers, and "Leaves," No. 45, by G. C. Kooyker. The exhibition, which will well repay a visit, will be open every day from 11 till 5 until October 23.

H.M. the King, as Emperor of India, has made a permanent loan to the Victoria Memorial Building at Calcutta, built from the designs of Sir William Emerson, past-prethe designs of Sir William Emerson, past-president, R.I.B.A., two of his Oriental oil paintings of great value and interest, the subject of one being "Shah Zameen, King of Oude, Receiving Tribute," painted by Robert Hone, and the other "Nawab Walazah Mahomed Ali of Arcot," by G. Willison. The dimensions of these works of art are 96 by 62 and 95 by 57 inches respectively. The pictures are expectively to agriculty ways shortly. by 57 inches respectively. The pictures are pected to arrive in Calcuta very shortly.

MONT S. MICHEL, THE ABBEY 038 THE ARCHANGEL, AND ITS SEA GIRT TOWN.

At the Royal Photographic Society's Exhibition in the gallery of the Royal Society of British Artists, in Suffolk Street, Haymarket, S.W., yesterday (Tuesday) evening an interesting lecture on the abbey and town of Mont S. Michel,\* on the eastern vergo of the Normandy coast, was given by Mr. H. W. Fincham. The chair was occupied by Mr. A. Harbort Light, E.P. S. The gold. W. Fincham. The chair was occupied by Mr. A. Herbert Lisett, F.R.P.S. The address was illustrated by one hundred and twenty admin able slides from photographs, taken by the lecturer, by special permission of M. Enlart, on the recommendation of M. Paul Gout, the Government architect to the fabric.

Robert Louis Stevenson said :- "Mankind was never so happily inspired as when it made a cathedral. . . . Tis the best preacher a cathedral. . . . Tis the best preacher itself, and preaches day and night; not only telling you of man's art and aspirations in the but convicting your own soul of ardent sympathies, or rather like all good preachers. it sets you preaching to yourself and every man is his own doctor of divinity in the last resort." To-night I want to show you some photographs I have made and tell you something about one of the most picturesque of these sermons in stone—Mont S. Michel, the Abbey of the Archangel. And while I show you some pictures of its varying aspect from the beat. from the bay, I will give you a very brief account of its history. It stands in the great bay of Cancale off the coats of Normandy and Brittany, and is easily reached by crossing from Southampton in one of the fine hoats of the London and South-Western Railway to the French port of St. Malo, and thence by rail to Pontorson, where we change on to a light railway, and after a few miles run to the coast we cross the three miles of embankment built over the sand and alight just out-side the fortifications at the foot of the rock. Long before any buildings appeared upon the rock it was known to the Romans, who called it Mors Jovis, standing in the Forest of Scissy, about three miles from the sea. Constant erosion and subsidence with tradition says, an earthquake drove the coast line back until the forest disappeared, and the rock stood alone, surrounded by the sea, which at low tide left bare miles of dangerons quicksand so that the rock became known as Mont S Michel "in periculo maris, or, in peril of the sea. Tradition tells us how, early eighth century, the Archangel appeared to Aubert, the Bishop of Avranches, and ordered him to build a sanctuary on the rock in his honour, and in the autumn of the year 709 the Abbey was started with twelve canons in residence. This original building lasted until 992, when much rebuilding took place, and the Abbey was enlarged. And so through the centuries the Abbey continued to grow, and thousands of pilgrims brought wealth and fame to the monks. Here on the north side we see the face of the rock covered with a Here on the north side little wood, the sole remaining relic of the ancient Forest of Scissy. Towering above i we see the building of the 13th century Towering above it which to this day has been known as "The Marvel." so wonderfully has it grown up Marvel." so wonderfully has it grown up from the rock, and such beautiful halls does it contain. At the foot of the wood we see a little building which covers the well of St Aubert, which until the seventeenth century yielded the only water supply to the Abbey, and was reached from above by a fortified The Abbev buildings themselves were strongly fortified, but as the little town grew at its foot and the aggressive Englishmen were ravishing the neighbouring coast and constantly threatening the Mount, it

And at the south west corner we see the Tower of the Windmills, where the abhot ground his corn and kept the main store of the provisions of the moinstery. The array square building was effected as a barrayks, when, the great Revolution maying divisor of the monks, the whole place was turned into a mison. At the place was turned into a prison. At the western point of the rock adjoining the but racks stands the Gabriel Tower, with its many wide monthed embrasines for cannon and a little stone sentry hox, now used as a lighthouse, overhanging the battlements; in lighthouse, overhanging the battlements; in the middle of the tower is a hollow shaft for the purpose of carrying off the fumes of gim powder. And in the deeply shadowed angle of the wall is a strongly guarded little sally port, from which the defenders could issue and take in the rear any enemy attacking the walls. As we turn to the south we come upon the little Chapel of St. Aubert perched high upon a great rock, its only approach being a flight of stone steps from the sandy beach, and entirely inaccessible at high tide When St. Aubert started to build his church upon the summit he was much troubled by great rock too large to remove, and which obstructed the commencement of the work But one day the Archangel appeared in the guise of a little child, and with one lift of his bare foot sent the rock hurtling down to the sands below, and this chapel was built on the top of it in memory of the deed, and possibly to prevent any more such dangerous flights. From the little platform at the top of the steps we are able to look into this miniature chapel. When St. Michael ordered Aubert to build the church on the rock the Bishop expressed considerable reluctance to make a start, and the Archangel, to convince him that it would be dangerous to delay the job, touched him on the head with his finger and made a great hole in his skull. This settled the matter, and the Bishop set to work at once. At Avranches Cathedra' across the bay there is still preserved with great veneration the skull of St. Anbert, and you can see the hole where the Archangel's fin ger entered. The currous thing about it is that however the hole was made it shows clearly that the owner of the skull lived for many years after, for you can distinctly see the thickening of the bone around the edge of the hide as mature tried to repair the damage From the rock of St. Aubert's Chapel we reach the north side of the mount, with its little wood growing down to the water's edge. and looking out across the bay to the north we see another rock somewhat smaller than the Mount known as Tombelaine. As the tide receibs we can walk across the hard sand the bare two miles which separate the rocks. Care must be taken over this walk. for when the tide turns it rushes across the sand with nearvellors speed, the sands become unick, and there is little hope for anyone who should be caucht in this way. But having smoot or canonic in ins way. But having reached the resk we scramble to the summit, and here we find the remains of the fortifications which the English built and used as their headquarters during the many years of the fourteenth and fifteenth centuries when they were trying, without success, to cap ture the Mourt. Returning from Tembe laine, we can the eastern corner of the Mount close to the North Tower, the most pictur close to the Neth Lower, the most facture esque of the many towers which stand at intervals a and the massive wall of the town. All along the too fithe walls you will notice how the Lottlewests are corbelled out, increasing the width of the walk on the walls, and forming what are known as machicela, and forming what we show complete is a slot tions, for between such stone corbel is a slot open above of me which the defenders could pour more I had, boiling oil, café au hit, or any other attractive fluid upon the heads of

~1 .I or the tance. You so how to house one right on to the way who come right on to the war which to many of them forms a peasant premer is four their back dears. Another bit of the virollar killed by the Lower of Loberty and topped by the pleasant little Hotel of the White to with its salesm level with the top of the warm where one can sit at direct and carbot to where ere can sat at dimer and can be wanted where ere can sat at dimer and wanted of the many lights and shades or the research sands, and as the singles deviates the shad well the rock cropping to a research two towers close together. The letter of the King and the Arade Trees. The entire to a stein dwarfed in height by the critical to in stein causeway, which here rock to the exact the Mount 20 ft, above the evol of the sand; which, although it gives a constance as to the Mount, is causing the sand of the king to silt up so rapidly that in a feet rock to Mount will be standing in given he dainstead of heir given the periloit the sear. I understand that the French to crimers have at last recognised this danger, and in have at last recognised this danger, and or tend to remove a portion of the digneral order that the sea may again circulate is got bound

the rock.

And now we have arrived at the outer gate of the town, known as the A ance. At high tide the sea washes right up into this gateway, and one has to enter the town in a boat. On the rocks above a great boulder sticks out in a threatening manner, although it has been so for many centuries. It is called La Gire, and to this day the fishermen of the Mount salute the stone as they go out to sea, and again on their safe return with their catch. Passing through the jate, we turn to see the little guardhouse up the steps, and the embattled wall on the right from which guns could cover the entrunce to the torus. the town. This gateway was closed by a massive oak door, hinged at the top so that when lowered its weight would be a great when lowered its weight would be a great assistance in its defence. On our right as we enter the gate we pass two currents old guns, which are called the Little Mobaels. On June 17, 1454, the English, under the Earl of Somerset and Lord Soiles, with a 000 men attacked the Mount, but after a terrific fight they were driven oft and lobe behind them these two great cannon, of which the Montois are still very proud. By a few yards further on we come to the Borbeau, or Boulevard Gate, the second of the three gates which guard the entrance to the town. Here every visitor, be he pilgt more system. gates which guard the entrance to the town. Here every visitor, be he pligt mere seder, beneath the rank of a Prince of France had to leave all arms he carried before be could approach the last defence of the estrate. This third gate is known as the Gate of the King, and it was very strongly fortified; before it was a meat and drawla lige, and then it had an iron portcullis, which stell hangs in the arch, while above a covered passage had machicolations down when the defenders could pour unpleasing the jate. The most is now filled up, and on a their selection the hoods of these attacking the jate. The ment is now filled up, and on either's leave the hotel buildings of the Poular L Conner v. once kept by the Widow Poulard. It is soft the most popular and expensive house of the last street there are several small and out for tall a hostels still carrying the old sizes of the mildle ages, such as The Syen, The Whote Golden Sword, and The Whote Short. Some of those have the advantage of the design rooms being on the cry wall, end any fother can toss you among the case good as the five which old Midame. For feed was so long famous. Passing through these last gate we enter the only street of the fown, and turn to see the inner side of the great gate, with its guard room above, now used as the Comits guard nom above, now used as the munal School and for the meetings of the town council. On the left is an interesting half timbered house, beneath which is the first llight of steps to the ramparts. And we see

<sup>\*</sup> Illustrations and plans of the Abbey and Mount of S. Michel, by the late Viollet-le-Puc, appeared in the Building News for July 14 and August 4, 1871, and a plan of the Mount, a sketch of entrance to the churchyard, and general view by L. J. Jickson, in our issue of July 25, 1834; a double-page sheet of sketches, by Francis Massy, in that for October 14, 1887; La Grande Porte, a drawing by W. S. Betts (accompanying a description of a visit of the Mount by the Society of Architects Sketching Club), April 8, 1910; the Crypte d'Aquilon, from a photograph, September 23, 1892; measured drawing, photograph, and details of cloisters, June 17, 1910; sketch of a crocket from the cloisters, by A. J. Knott, April 8, 190; and drawing of a leaf capital in the Salle des Chevaliers, by G. A. T. Middleton, September 28, 1906, p. 424.

say and the taxe, wall and a pictur contains and a picture of called the Tourelle of attention to were of the watch, story of the town contains many In the street of the fown contains many referestic, medical houses and hostelries, with the roll signs still projecting across the jath. Apart from the hotels, the only distincts of the seems to be the sale of solveries to the visitors and pilgrims. And hardy of the shops have for centuries continued the sale of beads and shells and other objects of purty to the crowds of strangers who pass between them. During the day in the helidity season there may be four or five the body season mere may be considered vistors, but with the departure of the last from at six o'clock they are nearly many and the latte town of 200 inhabiall good, and the little town of 200 inhabitants is very quiet indeed. What they do in the water I cannot say, for as all the laundry work goes to Pontorson they can't we as a me of the seaside towns are sup posel to do by taking in each other's washing. At the shops sell the pilgrim's badge of a metal scallop shell with a figure of St. Michael upon it; but the principal article nowadays is the picture post ard. As the street climbs the rock it narrows like a deep rayine until one can almost touch both sides at once. There is a little hostel which has at once. There is a little hostel which has hardly changed at all since it was built in the fourteeith century. Its interior is most picturesque, and in the dusk of the even ing you can see perhaps a score of fishermer and women settly remain and women sitting round a long table with basins of "eroute-au pot," while a woman is tossing implettes at an enormous stone fire while a woman lace, with a big fire on the low open hearth. The flakering firelight and the deep, dancing The flickering firelight and the deep, dancing shadows have an effect which is quite Rembrandtesque. The ancient parish church, dedicated to St. Peter, stands halfway up the street, with its chancel carried on an arch properting over the path. It is an interesting old church of the fourteenth century, as discontains some quaint tombs, all carved in the local granite; these are very simple, in character, just the deceased's simple in character, just the deceased's name in bold capitals, with a date, or a chalice and cross standing up about half an inch high, the remaining surface of the stone beirts sunk below. Here also is the Black Madonna that used to be in the crypt of the Abbey Church, the successor of the statue that miraculously escaped the great fire of 1112. A passage under the chancel leads up to the little churchyard, and close by is the house in which lived Tiphane de Rugnenal. the accomplished wife of the great defender of Brittany, Bertrand du Gueselin. This house, although much restored, is very preturesque, and stands in a charming garden perched on a shelf of the rock.

Now we will take a little ramble along the

Now we will take a little ramble along the top of the town wall, and climbing the steps by the Kin, state we pass on to the ramparts, where we can look down into the street, and on the left we see the little Tourelle du Guet, and the steen pitched roof of the Tower of the Arcade still retains its ancient roof and massive tumbers, and the only light comes through the little embrashes and loopholes in the walls. This is a part of the public walk around the walls, and as there is no public lighting of any kind on the rock, it gets very dark in here quite early in the evening. If the visitor takes a walk after dark he is furnished with a paper lantern with a candle in it, which does not help you much as you stumble up and down the many flights of steps which branch off the main street. Here we see the little covered way above the Gate of the King, which hid and throtested the defenders while preparing the molten lead and helling oil which they nouned through the machinelations at their feet on to the attackers of the gate below. All the large towers appear to have been roofed similar to the Tower of the Arcade, and here inside the Great Tower we see the upper it on now here to the sky, but still contain it, a great fireplace round which the guard most have sneat many a carousal on withit wights with the Island of Tombelvine across the bay. You can see the corbels in the walk with a carried the roof timbers, and the walk with a carried the roof timbers, and the walk with a carried the roof timbers, and the walk which carried the roof timbers, and the walk with a carried the roof timbers, and the walk with a carried the roof timbers, and the walk with a carried the roof timbers, and the walk with a carried the roof timbers, and the walk with a carried the roof timbers, and the walk with a carried the roof timbers, and the walk grees and the tell page to the carried the roof timbers and the walk grees and the tell page to the carried the walk grees and the walk grees and the carries of the carried the roof timbers and

Here from the top of the North Tower we look d wn on to the Creat Tower, and the length of wall between, and here we can see the inside and outside of the machicolarous. It you look closely on the path against the will you can see a row of slots, each of which opens straight down the wall between the corbels on the outer side. Here the old houses are built close against the wall, the other side being in the street two or three stories below. High up on the rock we can look down on to the top of the Gabriel Lower, and beyond we see the little river lonesnon, with its granite embankment, running away inland and forming the boundary between Normandy and Brittany. In the old days this river ran round the east side of the rock, and so included Mont S. Michel in Brittany; now that the river has changed its course the Mount stands in Normandy. From another point we look down on to the town with its charming old houses and little gardens wherever they can obtain a foothold on the solid granite of the rock. Every one of the httle gardens is very fully cultivated. and the many granite walls are covered with fruit trees which bear splendidly, owing to their complete protection from the north. And turning we see l'Avancée Gate, with the fishermen's beats awaiting the arrival of the tide. Every cranny of the rock gives a hold to a profusion of wild flowers and shrubs, which cover with glowing colour the warm-toned granite which crops out between. Nestling under the wall of the Abbey is the ancient Anberge, the haunt of the hired soldiers of the middle ages, brought in to soldiers of the middle ages, brought in to assist the monks in their defence of the Mount. The sign of the inn is "La Trui qui File." or, "Sow that Spins," an ancient sign somewhat akin to our "Pig and Whistle." July 4 is the great festival of the coronation of St. Michael, and as the Abbey Church has long been desecrated and unused, a solemn mass is celebrated on a piece of waste ground close to the Abbey piere of waste ground close to the Abbey wall. It is attended by all the clergy for many miles round, and pilgrims come in crowds. At this one there was present the Archbishop of Bourges, with four bishops and some hundreds of priests. After the mass there was a grand procession all round the walls and up the street. The previous night, the eve of the festival, there was another procession after dark, and everyone carried a paper lautern on the end of a stick The effect was most picturesque, with the many banners and long row of swinging lights as the choir and pilgrims marched along singing "Ora pro nobis, bon S Michel." All the hotels were crowded, as each village priest brought with him his old lady housekeeper and several of his most im-portant parishioners, and a curious lot of Norman and Breton peasants they are. On the morning of the festival the most ram shackle old vehicles came across the saids from all directions loaded with peasants from the neighbouring villages all bent on getting a blessing from the great archbishop. The suisse, or bendle, at the head of the proces sines, or header, at the head of the procession is a most geogreous individual in a crimson uniform and golden sword-sash, carrying a silver made and a great golden halberd; then come the choir, with banners of Joan of Arc and St. Michael, incense and candles. The inhabitants of the town decorate their houses with green boughs and flowers. In the little wood on the north side of the rock the ground ivy spreads over the rocks in close grown masses, and this is torn up and hung in the fronts of the houses like curtains. Festoons of flags are hung across the street, and as the procession slowly wends its way up the steep street the whole appearance is very charming. The principal figure is the Archbishop of Bourges. a great personage, and the pilgrims flock to kiss his hand and receive his blessing as he passes by. Turning from the last of the procession as it passes us on the ramparts of the Great Tower, we look up to the Abbey towering high above the houses of the town; on the right is the eastern end of the building called the Maryel, and then we see the manybuttressed church with its tall and graceful fleche, and in front is the dwelling of the ablot. From the North Tower we see the Marvel alone, and the great flight of steps

which lead up to the entrance to the Abbey This is its north castern end, and you see the tall windows which light the three stories of wonderful halls it contains. From the north west we see the opposite end of the Marvel, with the walls which are the beginning of a great chapter house which was never built. The three arches in the wall of the top story are in the cloister, and the middle one was to be the door into the pro posed chapter house. The gabled building just below the great tower is one of the dor mitories of the monks. I am not showing you any plans of the buildings this evening. because it would require a great many to show the arrangement at various levels, they become very complicated; but these two sections give us a very good idea of the way the buildings cluster around the rock. The Abbey itself was strongly fortified long before the town walls were built. This long flight of steps is its only access, and this is protected by the terrace above. I found very amusing on a hot afternoon sitting in the shadow of the wall, to watch the amazement of the fat old Frenchwomen who. after toiling up the steep street, turned the corner and saw this great flight of steps between them and their goal. They would stop and puff awhile, and then bravely struggle on in blissful ignorance of the hundreds more steps to be climbed before they reached the top of the rock and the As we near the top of the Abbey church. steps we pass through the Gate of the Barbican, and the actual entrance to the Abbey This is called the Châtelet, rises before us. a tall building flanked by two massive cylindrical towers. It was built by Abbot Pierre le Roy about 1390, and it marks an earlier entrance known as Belle Chaise. The Châtelet, was closed by a heavy portcullis, the machinery for which still exists in the room above the arch. The military governor, who was a separate official to the abbot, was always getting into trouble on the ground that he vexatiously shut the gate too early in the evening and opened it too late in the morning. The entrance hall, or Salle des Gardes, is a fine hall with an enormous fireplace, round which the soldiers of the guard must have spent many a jovial evenguard must have spent many a jovial evening in the old days with a great log fire roaring up the chimney. The steps lead up from the hall to the passage to the Almonry, and in the other direction to the long flight of steps to the abbot's house and church. The guides who conduct the visitors over the Abbey have a waiting-room immediately behind this fireplace; they are officials of the French Government, and although they are not above accepting a tip, the whole place is open to visitors every day without any charge. This little passage day without any charge. This little passage leads to the Almoury in the bottom story of the Marvel, and here the visitors assemble while waiting for the official guides; but as I am the guide this evening we turn from the Salle des Gardes to the great steps which separate the abbot's outlined and monastery. The bridge you see was a short cut from the abbot's house to the crypt of the church, and so by a spiral the choir. This bridge is separate the abbot's buildings from the stair direct into the choir. This bridge is about the last of the many fortifications protecting the Abbey, for you see it is machi colated in the same manner as the ramparts. The abbot's house and other offices are in a tall range of buildings on the left of this passage, quite distinct from the rest of the buildings; it contains many fine rooms, most of which are in a bad state of ruin, and filled with rubbish and debris, only a few of the upper rooms being in use as the dwellings of the guides attached to the Abbey. On the next landing we see an ancient fountain, and a curious mass of the actual rock sticking up through the payement. There are several of these masses of projecting rock in various parts of the earlier buildings, and one wonders whether the monks attached some peculiar sentiment to them, as there is no apparent reason why they should not otherwise have cleared them away. On the next flight of steps we reach the cistern of the Almonry, a great stone tank built to hold the rainwater from the roofs for use when besiegers made it too risky to get water from the well of St. Anbert at the foot of the

rock. The covered bridge you see was a direct approach from the abbot's house to the choir of the church. At this level we can pass into the earlier buildings of the monastery. And we pass directly into the little Chapel of St. Martin. This is early 12th Century work, and although on its outer side it is lit by a little window, and also in its eastern apse, its north side is still the solid rock which rises considerably higher as it tapers to the summit. On the north side is the twin chapel dedicated to Symphorien, and much of its southern wall is natural rock, and against it we see a rough lump projecting as we saw it near the cistern of the Almonry. These steps lead up from the chapel we have just left, and here how the rock has been allowed to remain, although it blocks a large portion of the stairway. At this level are a number of massive arches and passages which formed the Chapel of Our Lady Underground, and much of the masonry is of an extremely early date. It was here that the earlier early date. It was here that the earlier monks were buried in shallow graves cut in the solid rock and in quicklime to ensure their rapid dissolution. Here you see clearly the early character of the masonry which, if not the work of St. Aubert himself, can be but very little later. Here also was the Chapel of the Thirty Candles, and the Chanel chroniclers speak of it as the berceau, or cradle, of the Abbey. The reason of the great height of the arches is to obtain a level platform for the buildings above. In one of these passages are the prison cells of the Abbey, some of the most awful dungeons it was possible to devise, and said to be the work of that prince of dungeons, Louis XI Here are two cells side by side, known as La Jamelle, or twins; this outer door en-closes a kind of lobby, and the two cells you see beyond each have a tightly fitting door. and when they are closed not a gleam of and when they are closed not a gream of light can enter, and very little ventilation, and yet prisoners have lived in them for years at a stretch. I had, of course, to photograph them by magnesium light so that you could see the interior. Here is another. called the Iron Cage, although it is mostly of wood, with a great iron shackle still bolted to the floor in its further corner. Here a revolutionary pamphleteer named Duborg was imprisoned in 1745, and died a raving lunatic in a year and twelve days. Close by is this enormous wheel, which was used by the monks to haul up the stores from the granary at the foot of the rock. It was worked by several men walking inside, and thus winding up the rope you see on the axle, this pulled up a wooden sledge. axle, this pulled up a wooden sledge. The sledge sliding up this stone inclined plane, called the Poulain; this has rebates on the outside edges in which the runners of the sledge fitted, and so kept it in posi-Near the wheel is the Chapel of Stephen, which you see is of early 13th Century architecture, with a very graceful vaulting springing from carved corbels on the wall. There are traces here of some interesting fresco painting of the same date as the building. This chapel was used by the as the building. This chapel was used by the novices of the Benedictine monks, and a vaulted chamber below was their dormitory. From a small door in a corner of the Chapel of St. Martin we saw just now we enter the crypt beneath the choir of the church. It is called the Crypt of the Great Pillars, a most appropriate name, for the pillars are truly great and many. At first sight the great diameter of the columns leads one to think that the crypt is of early date, but it late, being the work of Abbot really quite William d'Estoutville, before 1450. Its massiveness is owing to its having to carry the great weight of the choir above. the vaulting ribs die into the columns with out any capitals as we would expect to find in England. The play of light in this crypt gives some very beautiful effects as the sunshine moves round the rock as the day advances.

(To be continued.) ---

The corporation of Huntingdon have decided to proceed forthwith with the erection of forty artisans' dwellings on a site at Stoney Cross, adjoining the late Militia Barracks. THE ARTISTS RIFLES.

The chief wor, or the Artists' Rifles is train officers. The fact is not so well nown as it in 2'it be - X - Territorial corps to train officers. The known as at might be known as at m 2 at be — No Territorial corps has a finer history — For mine years in succession they proved tremselves, at the Royal Xaval and Viantary Terreamont, the champions in bayonet filtering, first of the Auxiliary and afterwards at the Territorial Forces, to come a minimum of the territorial Forces. In 1905 it was suggested that the winners of the Navy and Army bayonet fighting competition should have a special combat with the winners of the Anxiliary Ferros com-petition the Artists—The Artists won.

Petition the Artists. The Artists won.
They landed in the firm, are in France last autumn. Sir John French then took them back to Headquarters to reim a 8-hood of Instruction. The men were gazetted to different regiments in the firing line and distinguished themselves as officers. Eleven members of the corps have been mentioned in despatches, and seven have been awarded the Military Cross for "conspicuous gallantry and devotion to duty," whilst all have gained the praise of their superior officers.

The total number of commissions gained by members of the Artists exceeds 1,600, and out of this number over 500 have been gazetted to Regular regiments. At the start (according to Sir John French's despatch of February 2, 1915) the training school in France was able to turn out officers at the rate of 75 a month. This has since been increased to 100. It must be remembered that these men are gazetted from the School of Instruction alone, and that many com-missions are gained by men in England

before they ever get to France.

The Third Battalion of the Artists' Rifles is in training at a picturesque Essex camp under Lieut. Colonel Shirley, an Instructor at Sandhurst for five years, assisted by a staff of officers many of whom have been on the Western front during the early months of the campaign. The men go through an the Western front during .... of the campaign. The men go through an extremely interesting course. There are special courses in Field Engineering, Signalling, Map Making, and the Machine Gun, under experts in the different subjects. The men live as ordinary soldiers do, and the "fatigno" work of the corps is carried the "fatigno" work of the corps is carried them. out entirely by them. Practically all the officers and all the N CO.'s have been officers and all the N CO.'s through the ranks of the Artists.

The corps is open to educated men of all professions and pursuits. The connection between the Architectural profession and the Artists is well known, and there are members known in art, music, literature, commercial men, engineers, famous sportsmen and men from overseas who in pre-war days were prespectors, miners, ranchers, and fruit-farmers. At the corps headquarters in Duke's Road, Euston, the recruits are prepared for camp life. There are caprille officers and N.C.O.'s, and the newly-enlisted man is quickly versed in the art

of drilling.

The stay in London is quite brief, but by the time the recruit joins the battalion in camp he knows all the rudiments of drul and is able in a short time to delve further into the mysterics of a soldier's training. camp is never impleasantly overcrowded, for the obvious reason that men are constantly being gazetted to other regi ments. It is a difficult matter to regulate the supply and demand, but Colonel Sharley has apparently succeeded to a high degree No man receives uscless training, and so soom as he is efficient he is permitted to take his departure in order to accept a commission Trained as a soldier first and as an officer afterwards, he becomes a man who is sought after by Commanding Officers with vacancies in their commissioned ranks. The name is a magic word; it is the "open "Artist" is a magic word; it is the special sesame "to many a military door that would sesame "to many a military door that would be seamly natural. sesame otherwise be closed. And it is only natural Out in France and in the Dardanelles artist officers are winning honour for themselves and honour for their regiments, and their men will follow them anywhere, for an Artist appropriates a soldier's difficulties and knows exactly what he has to ordure.

T. HAROLD HUGHES, A.R.L.B A

\* From the Journal of the Boyal Institute of British

ASSOCIATED PORTLAND CEMENT

MANUFACIA RERS 1946 LID The report of the director of the united to the steadth orders so and meeting father edges, to be seen that the chester House, Oal Broad Street Land r = M - hchester House, Old Bond Stoot, Latter, E.C., to fay a 17 or a property that branche or only torogard at Jacob 114 ows £151 570 1 - 54 1 e profit attended it is a wind in a constant of the profit attended it is as wind in a constant of the profit attended it is a sum of the £455,711 3s. (If may refer not 2.1 for repairs and refer a mean to 2.355,711 3s. (If may refer not be sufficient to the following the following terms that the following the sum of the profit is and single to 1s. £51 201 15 4d. (making £270,590 1 s. 74) and waving £328,655 3s. (If An interim divided on the preference shares to December 31 101 was paid on March 51 105, amount not £62,829 16s.) and eaving a brance of the general reserve and depressition count, £50,000; to the payment of a final dividend on the preference states to Jus-30, 1915, at the rate of 5, per cert, per annum, amounting to £62,229 16s; maxing £112,829 16s., and leaving to be carried forward £153,025 11s. 4d.

The company's operations in all ceput ments have been seriously aftered by ti been seriously aftered by war conditions which prevailed during prawar conditions which prevaled during platically the whole period covered by the accounts, with the result that the profit earned shows a great reduction on that of the previous year. For reasons directly attributible to the war the demand for cement was considerably to dead which the proposed at the considerably to dead which the proposed at the considerably to dead which the proposed at the considerably to dead the considerably to dead the considerably to dead the considerably to dead the considerably to the considerably to dead the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the considerable to the consid duced, while the manufacture was conducted under difficulties due to the same cause Cost of production mercised, and although as time went on the selling price was raised, this was in respect to new business and did not affect the major portion of the year's trade. Consequently the directors con-sider that the results are as satisfactory as could reasonably have been expected recommend the payment of the dividend the preference strives at its due date on the 30th inst.

Although, having regard to the general state of business, a satisfactory return was made during the past year by the company's investments, the directors record with regret that quite apart from the soute political disturbance in Mexico which has affected all enterprise in that country, the works abroad in which the company is interested are suffering increasingly from the adverse ditions brought about by the war, and their aggregate production has been greatly curtailed. The South African works, however, are now running on a commercial scale, and the directors are able to report that the local conditions in that country are so far satis factory that steps are being taken to inclease substantially the productive capacity of the

Provision has been made in the profit and loss account for the annual instalments required for the redemption of the lebenture stocks, as well as for sundry other charges for depreciation and sinking funds. These items amount in all to £51,261 17s 4d. The directors recommend that, in addition to this, a sum of  $\mathfrak{L}50,000$  be carried to the general reserve and depreciation account. general reserve and depreciation account, bringing the amount of that account to £435,000. The total charge for the year for depreciation and sinking fineds will ther amount to £101,261–17s, 4d

First mortgage dehenture stock to an amount of £20,584 was redeemed and car celled during the year, bringing the total redemption of that stock to Jane 50 last to

Of the second debenture stock ±26.10 was also redeemed and cancelled, maker the total redemption of that stock to June 30 last £49,341. The discount and other expenses come ted with the issue of this stock stood at £174,623 6s. 1d. in the company's hooks at June 30, 1914. It has been thought The discount and other exwell to liquidate this amount by an appropriation from reserves accumulated in past years out of revenue by the operation of the sinking funds of the debenture stocks.

has been labeled ut upon works of repair has been laid out upon works of repair of the work budget of the work budget of the work is of mediavil massing to the spanness of which methods we owe in the schamess of which methods we owe in the name the extraor highly perminnence of our ancest churches, is far to seek among the majerity of to-day's craftsmen, and was sold in part of the equipment of even our most distinguished Victorian restorers. The greater are cut of the decayed stone belongs towirk of the last century. There are, for the dely, only a few points where the structhe dely, only a few points where the structure freeds strengthening. Weak places exist chaffy in some of the cracked Norman pillars of the nave, and in two long fissures starting in the Norman wall over each of the arst pillurs from the west end, and extend or and above the supericial decay, which exterds over a large area of the sarface, some

of the buttresses have crucked considerably, and must be dealt with.

Mr. Caron all is that the security of the windows is of first importance when they sustain so much invaluable glass. At present the protection of the glass is dealt with in a very haphagual and unsightly manner, and the glassian description of the glassian description. the playing of the rorth choir elerestory in a somewhat precarious condition. in a somewhat precarious condition. Mr Caron's examination of the tower leads to the conclusion that no grounds whatever exist for refraining from ringing the bells, provided they are hing in a properly de-signed frame and some cricks in the tower walls are made sound. He anticipates that an expenditure of £2.146 will be sufficient. Of this sum £591 is exclusively set aside for the proper protection of the ancient glazing. quite apart from the necessary repair of the quite apart from the increasary repair of the stonework of the windows. It is proposed to effect the repairs year by year until the fabric is in a thoroughly sound condition, at d to appeal for annual subscriptions to a

fabric fund.

#### THE PROFESSIONAL CLASSES BELIEF FUND . CHRISTMAS-IN WARTIME SALE

We appealed on p. 231 of our issue of September 1 for help for the Architects' Com mitter of the Professional Classes Relief Fund which is organisms a Christmas-in-Wartimos ale at the Albert Hall in the second week of December of Christmas gifts to the men at the front and to friends at home, the proceeds of which will be devoted to the relief of the professional classes who have been so sorely hit by the war, and we desire to urge all who are able to lose no time in co-operating. No morey is asked for, but art elss which the Committee can sell for five shelling each who a boundary of the articles which the Committee can sell for five shillings each, such as knitted goods, needle-work of all sorts, all articles pertaining to the various handicrafts, games, toys, and woodwork, jams, sweets, tockles, plum pud-dings, etc. A full list of the articles desired, and all other particulars, may be had by application to the Gifts Secretary, Profes-sional Classes War Relné Fund, 13 and 14,

sional Classes Wir Rehe' Fund, 13 and 14, Prince's Gate, Lendon, S.W.

There will be a series of prize competitions in connectine with the exhibition. Special prizes will be given for the best presents for Class as the fightent forces. Class the the wounded, Class to British priseners of war. Prizes to the value of £5, £3, and £2 will be awarded for those three articles undoreach of the above class s which are adjudged to be the nest suitable of the best made.

There is also a special prize competition for the provided. Three special prizes of £ 5, for the wounded. Three special prizes of 4.5, £3, and £2 will be awarded for the arthurst counter any class made by wounded sold in which are advoiged the best, any disability

which are an ingentine best, any disability of the competitive leng taken into considerative by the indges.

As at least 10,000 articles are required wider circulation can be ensured if everyone who reads this will tell their friends all about it and get them to he'p too.

OBITUARY

A architect, artist, archaeologist, and writer of considerable ability has passed away in the person of Mr. John Tavenor Perry, late of John Street, Adelphi, and The eve. The Boltons, Konsington who died Thursday last at 3, Burlington Gardens, Chiswi k, aged seventy-five years. He was a favourite pupil of the late Professor T. Hayter Lewis, and on the retirement of the Professor, continued to carry on his practice in the same offices in partnership his fellow pupil, Mr. Reed. Messrs. I and Read executed extensive structural alterations at the Alhambra, in Leicester extensive structural Square, and after its destruction by fire rebuilt the theatre on novel principles, the first serious attempt made to construct a place of amusement wholly of fire-resisting material The firm also built the north wing of University College, Gower Street, in con-Peter Jones's drapery establishment at Chelsea: the Chapter Hall, schools and vestry at the Chapel Royal, Sayoy, buildings on the Salisbury estate, Strand, and schools for the Deans and Chapters of Rochester and Worcester. As surveyors to the Union Assurance Office the firm executed many works of reinstatement as well as branch works of reinstatement as well as branch offices, including those for the company in the Whomestrasse, Berlin, Mr. favenor Perry was awarded in 1864 the Instituto Silver Medal for drawings, and the following year became the first holder of the Pugin Studentship. Among the drawings from his Studentship. Among the drawings from his pencil reproduced in our pages was one depicting the tower walls in the great church of Prenzlau in the Uckermark, which appeared in our issue of September 22, 1905. Widely read, widely travelled, and possessing keen powers of observation and a retentive memory. Mr. Perry wrote many papers on architectural and antiquarian topics, and frequently lectured in earlier years before the Royal Institute of British Architects and the Architectural Association. Quite recently he adduced specious, but to some of us unconvincing, arguments in sup-St. Bartholomew the Great. Smithfield, originally terminated in a square east end, and that Sir Aston Webb had insufficient authority for his formation of an apse with ambulatory on the lines of the chape White Tower, but the evidences of the bases of piliars ir situ were too strong for his theory. We gave Mr. Perry's portrait in our issue of July 4, 1890.

Mr. Henry Charles Pullin, L.R.LB.A Quarrendon Street, Parsons Green, S.W., of the R.fle Brigade, was until recently stated to be missing, but is now reported to have been killed in action on April 26. Aged 46 years. Mr. Pullin served a four years' term of articles with Mr. F. B. Wade, F.R.I B A. and remained in his office as assistant for six years. He afterwards assisted other archi-tects, chiefly in London and Brighton, and did competition and other small works on his covn account.

A verdict of accidental death was returned at an inquest at Marylebone on Thursday on the body of Pullip Arthur C Wilkenson. fifty-two, architect, of Craven House, Kings way, who was killed by falling from the roof of a house in which he was a boarder at Murylebone. Evidence was given by Mr. H. W. Wilkinson, deceased's brother, Mr. C. W. Turner, and others. The late Mr. Wilkinson, who, in addition to his professional practice, had a substantial private income, was a special constable in the Marylebone vision, and before retiring at night had been in the habit of going on to the roof of the house from his bedroom. It was on the occu-sion of such a visit that the accident occurred which resulted in his death.

The Local Government Board have given authority for the preparation of four further town planning schemes under the Housing Town Planning Act, 1909. Schemes are authors it the prepared by the corporations of Crowdon, Mansfield, and Nottingham, and the control of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the pro the urban district council of Scaton Delaval, and relate to areas of about 800, 3,300, 500, and 2,400 acres respectively.

## Currente Calamo.

Taken as a whole, the Budget dors credit to Mr. McKenna, whose businesslike exposition last week was a welcome contrast to Mr. Lloyd George's gassy and prolific Budget speeches, which left the House of Commons tired out with endeavouring to find out what was meant. Mr. McKenna has taken front rank in the Cabinet at a bound, much as Mr. Gladstone did in the fifties, when he was called on to mend the holes in the nation's moneybags made by the Crimean War. May it be Mr. McKenna's good fortune to start us all by-and-by on the return road to solvency and prosperity with some such a series of Budgets as those Gladstone shaped, and with as good results! Having said this, and at the risk of seeming ungracious, we must have a few grumbles. It would have cost little to put builders on the same level as the rest of the taxpayers, as Mr. Lloyd George and Mr. Asquith promised should be done-we mean, of course, with regard to the increment duty which has been so unfairly levied in the Lumsden and Walker cases. The other mistake is the Walker cases. abolition of the halfpenny postage rates on postcards and newspapers. It will bring comparatively little into the Treasury, but will harass many trades. It will, of course, delight the postal authorities, who are reactionary by nature, and unamenable to grace; and who might have contented themselves with the restrictions of the penny letter rate to one ounce, to which we have little objection, so bored is everybody with the big parcels of circulars and samples crowded in on us by the latitude given by the fourounce limit

In the course of the trial for conspiracy in regard to the contracts for building the new Parliament Buildings at Winnipeg for Manitoba, now being heard, and in which are indicated Sir Rodmond P. Roblin, ex-President of Council: Dr. W. H. Montague, ex-Minister of Works: Mr. James H. Howden, ex-Attorney-General; and Mr. George R. Coldwell, another Cabinet Minister, counsel for the Crown announced last Wednesday that further charges will be preferred. Mr. V. W. Horwood, the provincial architect, the first witness in the preliminary investigation of the charges, underwent a severe cross-examination at the hands of Mr. E. F. B. Johnson, of Toronto, but he adhered to his previous statements. Referring to some alleged inaccuracies in a speech made by Dr. Montague in the Legislature defending the contracts that are the subject of the present charges, witness declared that Dr. Montague asked him to write a letter taking the blame for the incorrect statements made.

The scheme of temporary assistance for architects whose practice has fallen off owing to the war, devised by the Council of the Royal Institute of British Architects, and already experimentally adopted in London, is being applied to South-West Lancashire. To each architect employed the task will be assigned of preparing for an allotted area a series of ordinance maps, in order to demonstrate from available data the density of population, the infantile mortality, the general mortality, the mortality from specific diseases, the amount of local and through traffic, the proportion and distribution of open spaces, the places of outdoor and indoor recreation, as well as the vacant or convertible sites suitable for artisans' dwellings,

playgrounds, terraced parks, factories, and remained meaning and compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to the compared to t plans, especially, for example, those relating to Manchester and the contiguous group of boroughs, a county scheme of town-planning and supplementary arterial roads will be prepared in anticipation of combined action, with the support of the Roads Board, soon after the close of the war. The harmonising of the many conflicting or isolated schemes long in embryo will be essayed, and independent suggestions, as far as practicable, incorporated. By this means it is hoped to promote economy and efficiency, and to save time when county expenditure on a large scale can be undertaken.

The machinery of the University of Liverpool's department of civic design in the School of Architecture has been requisitioned to be the centre for organisation, and Professor Patrick Abercrombie is acting as technical director. The founder of the school (Sir William H. Lever, Bart.). Vice-Chancellor Dale, Professor C. H. Reilly (architecture), Associate-Professor J A. Brodie (civic engineering), Professor E. W. Hope (civic hygiene), Mr. H. Chaloner Dowdall (civic law lecturer), and others offi cially associated, or to be associated, with the school, will certainly lend their and. The school has given a signal lead to work of the kind in contemplation by the pioneer plans of Professor Adshead and its yearly competitions for schemes of city reconstruction and improvement. In the lectures delivered semi-publicly before the Liverpool Engineering Society, Mr. Brodie and other experts have outlined schemes of road traffic which depend for their development on a county continuance of the new highways formed or projected in the city area. Professor Abercrombie has addressed all the South Lancashire urban authorities on the subject of immediate co-operation in the contemplated town-planning, and he is receiving favourable

Mr. William Woodward's letter in another column is another grave indictment of some of the workers in our own industries. We fear there is no doubt that the eminent authority he quotes is an unbiassed and accurate observer. That similar shameful slackers are in great part responsible for the sickness and hardships endured by our soldiers seems but too likely, if the report of the special correspondent of the Times as to the behaviour of thousands of men employed during the past nine months on Salisbury Plain for the new army is well-founded. Of the still urgent need for more accommodation for the troops who are hadly overcrowded in some parts we have, ourselves, personal The Times correspondent knowledge. says :-

"Take first the need for economy. When the construction of a certain camp which lies over a hill some distance from the railway was begun the Government bought up for the purposes of transport a large number of farm wagons. The price paid for the wagons could hardly be described as a competitive one, but they had not been long in see when it was found that the steepness of the load to the camp made horse transport undesirable, fraction engines were then hired for the work at a price 60 per cent, higher than would be asked in formal times. These engines drawing heavy loads juickly mined the road, and repeated repairs have ost the local authorities nearly £40,000. Now, when the camp is practically completed, work has seen started on a light railway which will connect with the main line. People are asking why the ailway could not have been built at the outset. While there is discontent upon this matter, feeling ams highest over the apparent waste of money incurred in the building of huts for the troops. It has admitted in Parliament early this year that such of the labour employed on this work was of n unsatisfactory character, and if one-half the lories I bave heard of idleness and a determination to make an easy and well-paid job last as long a possible are true, then the labour engaged has

We are as odd too the west suckers ire unmarried men of so it ity age, and that tuen lazines, i estrem. He saw himself groups where one may caked and several others booked on and coafted while he leismely carried through his job. Study young fellows pushed whee barrows or carried planks with almost Indied cowness. He

containes.

"A farmal upon ells find many sa the hurs have been circled fied in that the man engaged on the plot with a visual the events. It was quit a common practice among them to turn up for work in home and made them to turn up for work in home and made at the which had gene "I could not fell you," he edd d, "how many times I have seen them a kep und to he hope when they were supposed to he working, and when they were hung pard for working. They are detailed an small ging, and then have not be notingly formed home to look after the major to the enterty of bournam. Hills deven in my the desort of taking a nep one day, and when they were hand differently do they are they are had done enough. The trust it was over look 4. Another former told me of two carp interstream Scotland who were heard to say, "Ingland's eggined fire They give you all day to do in hour's work here, and you go, a handful of money to doing." The It was old son of one of his munician home after his hist day on the work and sold fine one. I he rid of one enstance of exultation meet the cisine's of the job which brought well-merited junishing at A lebour to happen a sud the Keser was the best friend they had done A form hand discipled with him and kneek dimin down."

And while all this is going on, the winter is approaching, and men will die of discuse presently, as they did lait winter and spring, whom we shall want hadly at the front by and by, and we shall have plausible explanations in Parliament, and the usual assurances that it was all anavoidable as long as the nation will accept them, and pay through the mose for laid management and the shame ful treachery of clackers to their fellow men whose exemplary devotion to the Empire and the Homeland they are too cowardly to emulate and too lazy to second.

Last writer mode as familiar with " Jock Johnsons," "Black Marias," and a whole vocabulary of humorous nomenclature for German shells and for the topography of the trenches, from the oater line, or "drawingroom," to the inner line, or "reception room," and the grim "dormitory" in the rear where the dead are buried. Possibly it was an architect or a decorator who first called a body belt." the dado round the dining-room. Among the various comestibles that find their way into the dining-room 'tornedoes'' stand for sausage rolls and " shells " for twopenny meat pies. In training camps plenty of satire flies about if the eakes are smaller than usual-as, for example, "This is not up to chest measurement." or "This is below standard height." "Somewhere in France" (says the Munichester Guardian) it became the custom to call French matches "Asquiths," because you have to "wait and see" what bappens when you strike one.

"I like a bit of ham and bacon as well as anybody, but it is the first time I have known of an architect being called in to build piggeries, said Alderman Binns, at the Knaresborough Guardians meeting, on Friday, when it was decided to pay a fee of three guineas to Mr. Illingworth for plan and specification for new piggeries on the workhouse farm. Let us hope Binns will never have to eat his ham and bacon as a welcome guest of the terrordians. If misfortune drives him to the workhouse with the rest of us, he will soon learn to appreciate the superior flavour of the product of pigs provided with I properly planned piggeries.

THE VILLA DI PAPA GIULIO, ROME: DI VIG-NOLA, AMERICA

Barozzio Giacomo, les des læng an eminent architect, was a brilliant engineer, and is better known universally is di Vignola. On almost equal terms he represented with Pillodio the academic and tetrograde tiste of his time, and both these architects are rightly accounted leaders of the school with which their names are associated. Notwith standing his strong predilection for books and a fancy for rigid architectural rules. Vignola displayed considerable taste. He was not actually a letter man, and so kept clear of becoming a slave to his texts. His work, indeed, was distinguished by a marked originality. Moreover, he succeeded in impressing his imaginative conceptions with no little freshness of minner, while he observed a more strict compliance with propriety in design than prevailed amon, his followers who flourished so abundantly Juring the enassume the summarished so abundantly turing the en-sing century, when architects, in emulating fashion, threw over triturated control with all its principles of decorum, and conse-quently their productions degenerated into the offentity their productions degenerated in a one Baroque. The lambent architectural vogue of to-day, commonly designated the "Free Classic Movement," less tended to the revival of Vignola's methods, and it is tendency has been encouraged by the recent pre-dominance of a cult of schools en and pedagozy in studios occupied by professional tuition classes. Students are induced to be on the abert for precedents, and copies are sought for as recapitulations V and is works in this way appear to be laid under contribu-In this way appear to be laid under contribu-tion for the time being, if not as the goal of achievement. The well-kn in Villy di-Papa Giulio, which Vienela designed for Pope Julius III (1550-1555), and herb in Rome, is for these purposes, perhaps, one of his best buildings, by presenting advantable suggestions as a model of an available type, and it ranks in that respect better than some of Vienela's more ambitious and distinof Vignola's more ambitions and distinguished undertakings. Every invarial student of architecture must recognise the charm of its grand cortile, finely bill out with the handsome semicircular colonnade which so ably distinguishes the larger Casino,

Very much need to be measured to be adapted by the Villa di Papa Gullous to a good by the Villa di Papa Gullous to a good to be a good become somewhat does is the and I whose become somewhat doasdard, its glory having departed, and so t stands in str he contrast to the time when his palace was celebrated by its Papal splen-The inner wan of i ar and circumstance. The circle, as may still be seen, was hand mely decorated in the Pompeian style I've line apartments, possessing exceedingly stricted grammental centings, occupy the gram of flor. The details of the structure throughout are in keeping with its general acception, and are characteristic of the capable artist who here, as elsewhere, exhibits the influence of Michael Angelo, and in his identification of the designs of Peruzzi in Rome. The accompanying admirable sketch of the Villa di Papa Guilio has been lent us by Mr. Alick G. Horsnell. Some Medallist and Tite Prizeman of the Royal Institute of British Architects. It formed part of the series of foreign studies which this artist made when holding the Same Travelling Studentship. The committee considered these drawings is highly that the Council was induced, when the studies were submitted for tine apartments, presessing exceedingly duced, when the studies were submitted for approval, to agree to their exhibition to the members of the Institute, and in consequence the whole set was recently shown in the big callery at C induit Street. There can be no question as to their thoroughness and highly interesting character, and we have been allowed to make a selection for publication in the BUILDING NEWS, where they will be much appreciated by our readers.

The Villa di Papa is reached by way of the

Pente Molle and proceeding to the left of the Tiber for about a mile and a half past the Acqua. A cross (with its famous wellhouse designs I by Bernard in 1616, and from thence turning to the right and passing along the road which loads through the vineyards on ther hand and so on towards the long saulted gateway, called the Arco Oscuro, roung the numediate approach to an open space where this building by Vignoli stands on a stacious site extending its frontage along the left side of the piazza. Barozzio Gacem, who was been in 1507, diel in 1573. His name of Vignola resulted from his father having tiken refuge in the obscure village of Vignola, near Modera, whose the boy was for ught one and it was not till he was 28 years old that he went to try his fortimes in Rine. The young architect soon became ther hand and so on towards the long R no. The young architect soon became may under Papal pathenage. He built the masy under Papal patronage. He built the famous Parto dei Branchi at Bologna during the northeast of Pas IV. He was made their architect to Julius III. and succeeded Machael Argo has architect to St. Peter's at Bane. Various linested the reconstruction of the aquaduct Aqua Virgo, built 45 n.c. We be not propose to give a list of his many works, but at will be remembered that Variola designed the great pentagonal Palace of Captarola near Viredo, and he was the architect of the new destroyed ducal rulace of Pialetza. The Porta del Popolo in Rome was his work, at I the late Charles Gain er the well known Parts architect, who has award by the Levinte Royal gold medal in 1856, as ribed by Virtuala the design of the rules of the Fattery Palace. Various like the first serified to Vigoda the design of the ribe of the Fattese Palace. Vigoda like wase as summered to Lice here employed by Michael Ariget. Burnett, as I some of his master's design base here attributed to Vigoda.

the city was enable to dety "the united powers of Pope and Casar." Who that repowers of Pope and Cesar. Who that remembers Florence does not remember well the San Miniato in Monte, towering on its letty enumence above the city, and visible along the Lung Arno from the Ponte alle Grazie to the Ponte alla Carraja? and the inchanting views of the Valley of the Arno as seen from the marble steps of the ancient and the old, dismantled fortress i by Michael Angelo against the defended by Media, and the long avenue of cypresses, and the declivities robed in vineyards and of we grounds between the Gate of San Manate and the lofty heights above. At las been pointed out that the façade of this chinch resembles that of the church of S. Maria Novella. Now the interior is employed as a sort of Campo Santo for Florence. Ancient frescoes cover the side walls: the roof is of timber, and in the apse is a Greek mosaic representing the Christ with the Vagin and St. John on one side, and on the other St. Maniato wearing a regal crown and mantle, and holding the Greek cross. In front of the lofty raised choir is the picturesque chand built in 1448 by Michelozzo for Piero de Medici. The pictures it contains are attri-buted to Spinello Arctino, and here the miraculous crucifix of St. Giovanni Gualberto was at one time preserved. Above the steps of the choir are an exquisitely wrought screen and pulpit. The door to the right leads to the sacristy, built in 1587 by Nerozzo degli Alberti, and decorated with frescoes illustrating the story of St. Benedict, by Spinello Aretino. At the end of the nave on the left aretino. At the end of the have on the left is a chapel built by Antonio Rossellino for Cardinal Jacopo of Portugal, with his tomb of 1427. Though only 26 at the time of his death, he had received a Cardinal's hat from Pape Calixtus III., and had been appointed Ambassador from the Florentine Republic to Ambassator from the Florenthe Republic to the Court of Spain. St. Mimato may be approached from the Porta Romana by the enchanting drive of Le Colle with its ever-varying views. The pavement its ever-varying views. The pavement in St Miniato was illustrated from a m St Miniato was illustrated from a Pugin Studentship drawing by S. G. Follett in our issue of January 15, 1909, and from another set of Pugin drawings by William Dawson in 1977 William Dawson in our numbers for March 18 and April 15, 1904. The pulpit was shown from a National drawing by Robert Atkinson in the BUILDING News for February 22, 1907.

"OVERWEY," TILFORD, SURREY
We reproduce the architect's Royal
Academy drawing of this house, which stands on rising ground over the River Wey, with a fine view across Frensham Common and the open heather country to Handhead be The nature of the site, sloping sharply down from north to south, dictated the long harrow plan, and we show both the main floors. The drawing-room was an addition to the original scheme, in which the hall formed the principal sitting-room, with a large window for the westward view over Tufor I village. The walls, which are hollow. or account of the exposed position, are fared with local stock bricks of a varied purplebrown colour, and the roofs are covered with orown concur, and the roots are covered with the chandsmake tiles from the Nyewood kills. The verandah is of oak, and the builders were Messrs, Coddurd and Sons, of Feenium and Dorking. Mr. H. M. Fletcher, M.A.C. intab. F.R.I.R.A. of 2, Gray's Inn. Squate, is the architect.

THE NEW HOUSE," AIRLIE, GAR-DENS, W. DENS. W.
This house has lately been built on a site

This house has lately been built on a site at the southeast angle of Airlie Girdens, formed by the junction of Campden Hill. The walls are faced with brick and Portland stone. The belows for the basement are of a deep purple, in I were supplied by Messrs. Tucker and Sons, Ltd., of Loughborough. Those for the upper part came from Mossrs. Thomas Lawrence and Sons, of Bracknell. The general willing of rough brownish bricks, with smoother dark red bricks for window dressings. The roof is covered with Westmoreland. In the 2 belongs to the same series already of all ded to and shown by Mr. Albit G. Herstoff to summer at the Boya Institute of Britis Architects. This building was founded to are the Florent to matter who said by Messrs. Ames and Hunter. The architect for the third contray under Decids and F. R. F. M. Fletcher, M.A.Cantab., F. R. F. L. WILLIAM AND MARY HAUTBOIS, FROM FRITWELL MANOR, BANBURY, OXON, AND OTHER OLD PIECES OF ENGLISH FURNITURE

These examples of Old English furniture need no explanation. They are all genuine pieces, and have somewhat recently been exhib.ted in London. The oak chest, or hautbois, consists of three long and two short drawers, with secret drawer above, on a handsome stand fitted with three drawers on baluster legs and shaped stretcher rails supported on ball feet. The brass furniture is original. The piece is 5 ft. 6 in, wide. The remainder of the sketches on the sheet represent Chippendale furniture, all typical, restrained detail, and good in form.

NATIONAL COMPETITION, EXAMINA-TIONS IN ART, AND AWARDS IN ART, 1916.

In view of the urgent need for national economy and other circumstances arising out of the war, the Board of Education find it necessary to give notice of the following changes in their arrangements for the National Competition. Examinations in Art, and Awards in Art. 1916:-

NATIONAL COMPETITION.

1. The Board will not hold a National Competition in 1916.

Examinations in Art.

2. The Board hope to be able to hold the Examinations in Art as usual, and have issued regulations for 1916 accordingly. They desire, however, to give notice that it may prove necessary at a later date to suspend the examinations. In that event they will endeavour to give as long notice of the change as possible. AWARDS IN ART.

5. The interim regulations for scholarships, exhibitions, free studentships, and other awards in art applicable to the year 1914 are provisionally continued in force subject to the following modifications:—

(a) The Royal Exhibitions. National Scholarships, free studentships and local

scholarships to be awarded in 1916 may be restricted to numbers less than those stated

paragraph 1 of the regulations.
(b) The Board may find it necessary to restrict the number of new Local Exhibitions in Art to be added under the provisions of

hapter ii. of the regulations
(c) The award of Princess of Scholarships may be suspended for 1916, or, if continued, will be made on conditions to be announced later

(d) The Board will not hold short courses instruction in art at the Royal College

in 1916. (1) The grants in aid of visits to museums and centres of art instruction will be sus-

pended until further notice. Special Examination.

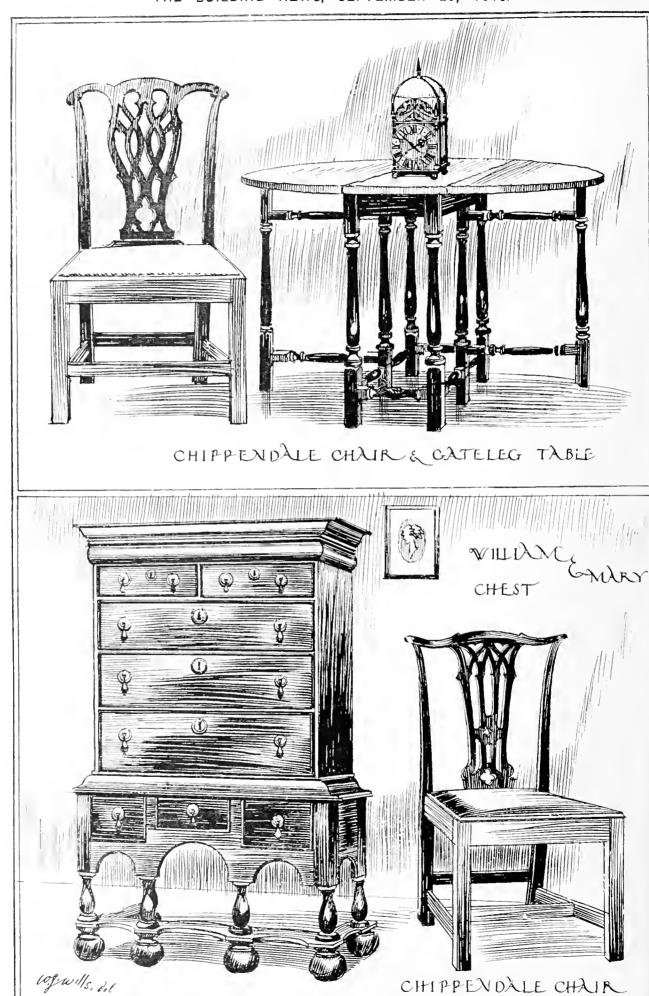

4 The Board lesire to take this opportunity of giving notice that at some future date after the conclusion of the war they propose to hold one further special examination for the benefit of candidates who had almost completed the requirements for the art class teachers' certificate and the art master's certificate when the old regulations expired. Provision will be made for the re examination

(a) Persons who were examined in 1914 in subjects necessary to complete an art class teachers certificate or an art master's certificate, as the case may be, but failed in one

more of those subjects:

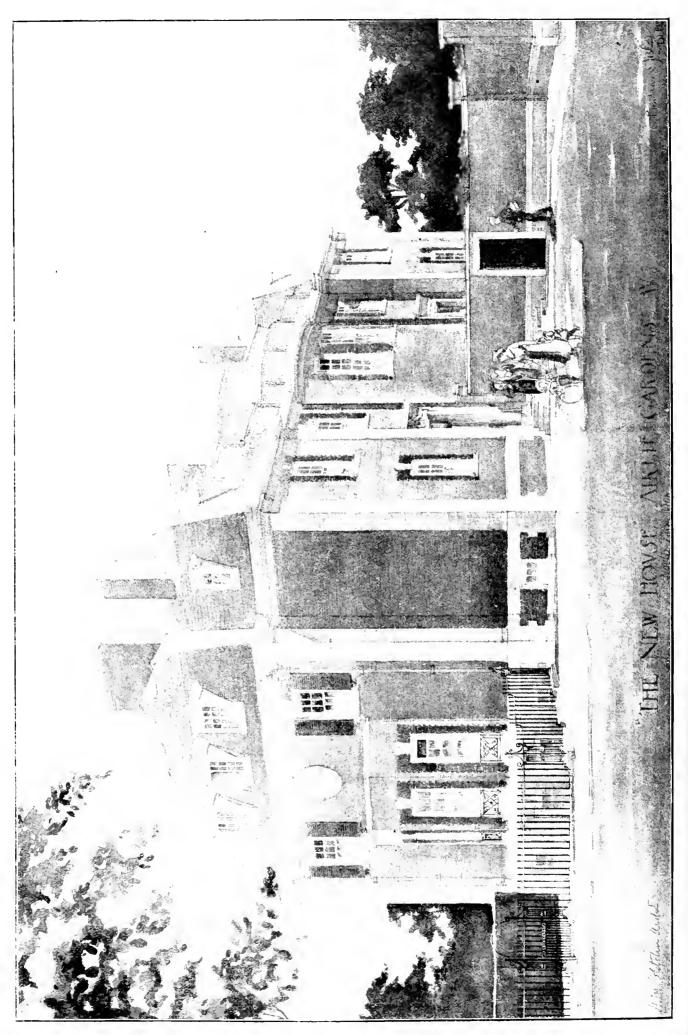

the Persons who, having the art class teacher's certificate, were examined in 1914 in drawing from the life or drawing from the antique, and have obtained, then or previously, at least a second class in each of these subjects.

The detailed arrangements will be amounced in his course, and at least three months' notice will be given of the special examination.

### A YEAR'S BUILDING IN GLASGOW

The effect of the war on the building tradedming the past year, and the probable reaction on the Glasgow district of the vast amount of reconstruction work that will be necessary in the devastated areas of Europe when beace comes were referred to by Mr. J. D. Hedderwick, Dean of Guild, in submitting D. Hedderwick, Dean of Gulld, in should his annual statement at a sitting of Glasgow Dean of Gulld Court on Thursday. The Dean of Gulld said that the magnitude and rain fications of the war had interfered with every interest and inset all ordinary cond tions With the conditions which had obtained at was not to be expected that the increase of work which showed itself in the second year of the extended city would be maintained dur ing the third year just closed. But in the figures of the past year the decrease in the total work was not so great as one might have prophesied in August, 1914. To a large ex-tent that had been due to the increased requirements of Government contractors, and in lesser degree to the operations of the School Board and the Corporation. One remarkable feature was that whereas under the prevailing conditions the bulk of the work might have heen expected to be merely alterations or additions and not new buildings, yet the former class of work showed a decrease of about per cent, from the previous year, and reached the lowest figures since 1889 90, while the new work showed a decrease of only about 12 per cent. In the year just closed the number of linings had fallen to 381, estimated to cost \$8816.636, against 542 linings costing £1.052,147 £816.636, against 542 linings costing £1.052.147 in the previous year. In that sum of £816.636 no less a sum than £753.842 was for new work, and only £62.794 for alterations and additions. For public buildings there were 36 linings. 21 being for new buildings and 15 for alterations and additions, representing respectively £184.075 and £6.575. In the previous year the valuation of picture houses authorised was £57.523. In the previous three years the average valuation for nicture houses was £45.706. In the year picture houses was £45,706. In the year under review the valuation had dropped to £5,536. In contrast with those of the previous year, this year's figures showed there vious year, this year's figures showed therewere decreases of £169.889. £85.924, and £14.582 respectively in the work authorised as regards (1) warehouses, shops, and offices; (2) workshops, etc.; (3) churches and halls; whereas there were increases of £51.935 aregards schools, and £2,165 as regards public huildings. There had again been a fall in the value of the linings in connection with houses and shops, the figures of the past year showing a decrease of £9.141 under the year showing a decrease of £9.141 under the figures of 1913-14, which in turn showed a decrease of 24.864 under the figures of 1912 13. In 1912-13 there was only one house of one apartment authorised. In 1913-14 there were apartment authorised. In 1915-14 there were 15. In the past year there were 63. So long as such houses conformed to the building regulations the Court could not interfere. The objections to such houses were obvious. The remedy was not so plain. It was a some what difficult problem, for an large cities there were always likely to be a number of single persons who did not want more than one room. In the past year there were authorised 156 houses of two apartments, 120 of three, 32 of four, 35 of five, and 48 of six and more apartments. Seven single and three double shops were also authorised. A very remarkable reduction had taken place in the remarkance reduction had taken place in the number of nulet houses during the year ended Whit-Sunday. 1915—i.e., from 18,341 to 13,178, a reduction of 5,163. The average rental of unlet houses in the previous year was £14 4s. 4d.; it was now £14 6s. 8d.

>-----The export of wood goods from Norway during the first six months of this year amounted to 797,000 cubic metres, against 462,000 cubic metres during January-June, 1914, and 587,000 cubic metres in same period in 1915. Over 740,000 cubic metres went to Great Paisein.

St. Catherine's oak, a giant tree on the estate St. Catherme's oak, a giant tree on the estate of the late Captain Guy Hopton, has just been demolished and brought into Hereford, having been purchased by Messus. R. Groom and Sons. Measured from the point at which it was 15 ins. in diameter, the trunk measures 72 ft., and had a circumference 5 ft. from the butt of 12 ft. 7 ms.

Professor Funders Pliebon " Slackers DAMBING IN WORKING HOURS,

In the course of an article contributed by Professor Fluiders Petrie, president of the Hampstead Scientific Society, to the Papers of the British Constitution Association by describes the enormous waste of life by deliberate dawdling in working hours as being perhaps, the most serious loss to England in the present age. He estimates that this dawdling involves a much larger loss of life and wealth within four or five years than the enormous losses of the present war. Among a number of examples that he gives he says: a number of examples that he gives he says:
In a public institution I watched men digging shallow drain trenches. They did in a week what the same number of Egyptians at a quarter of the pay would do in a day. Effective work, one-sixth. In a coast town I watched, day by day, four men employed to lay water papes. They played so successfully that they took about a week to do what they might have done in a day. A further reason for the delay was that a sark of coke was brought up every day for the night watchman's fire in Angust and the whole sackful disappears I each morning. Effective work, one sixth. In a Government institution a mason whom I watched during a week or two spun out his work so well that he kept or two spun out his work so well that he kept himself quite fresh to hurry off at four o'clock, atter which, as he said, he had "a mee little lusiness at home in funeral work," Effect ve work, between a lifth, and a tenth. In the work, between a after and a tenth. In the same institution a gang of men and foremon, supposed to be cleaning, carefully got into effective attitudes which were restful, but allowed of instant action. There they conversed until they heard some official approach. versed until they heard some official approaching, when they all swing into inclient to be irrested again as soon as observation was over. Certainly not over one hour's real work was done in the day. Effect we work, one tenth, or less. In ordinary policing carpentry work the time occupied by a man at 1s, an hour from a good firm, was from say to ten times what I could do the same work in, and it was spoiled by ridiculous blanders of using wood wrong side out. Effective work, one-tenth or less. In a public institution some ready prepared littings were brought to be fixed. or less in a purific institution some recognition prepared fittings were brought to be fixed. The work to be done was putting in six screws, attaching four hinges, and two locks. Three hours would be ample for a good man alone; a smart one would do t in two hours or less. By skilful use of conversation, mes-sages, fetching refreshment, an hour for tea. and other devices three men succeeded a spending two whole days, which works out at about one and a half hours for each screw put about one and a half hours for each screw put in. Effective work, one-twentieth. In house hold carpentry, a highly recommended man and his so were ergaged at 1s, 5d, an house together, on shelving in an empty house. I did a lathe headwork of planning, and gave a list of heights to be cut out of each board. They stacked the boards on trestles, so as a tenth breast high and gently sawed with only the weight or the saw and no pressure. In three days they did one half the plain cuts, and then give up for a rest. As the matter was argued a misself off the other half of the work in two hours alone. Effective works one-th right.

met, the enderty of the Lkn words who can be at the greater part of the greater part of the greater part of the greater part of the Everything and of the thing time the greater as ordered as problem institutions is that hadly provided for the strongly high, in order the keep of the whole interest on by huge half at they deterring requisite for direction by huge half at a by deterring requisite for and by running the normal workers. 12(OPURTY PROBLEMS AND LIVER

PROPURTY PROBLEMS IN LIVER OF LATER Divergood Property Owners Peril -Te Liverpool 13: 10:00 met at the Law Rooms in that c'y a Fralay, and tentatively discussed two Asteresta - paestro s. Alderman Taggart presided over a large attendance. The Chairman and Mr. G. B. Daniels reported the waiting of a deputation upon the Estate Committee of the Laverpool Corpora-Estable Committee of the Enverpool Corpora-tion. The object was to secure equitable treatment with regard to dilapidations on houses held under corporation seventy-five years! I less in such neighbourhoods as the southern side of Islangton, Pitt Street, Park Line, and Kempston Street. In each case original lessee had signed covenants for houses at that time occupied by high-class tenarts, some being of the merchant tenants, some being of the merchant prince type. Under numerous successive prince—type, tader numerous successive lessees the property had gradually changed in the eter, and was now largely used, for example, as workshops for foreign cabinet-makers. The contention of the deputation was that to strictly enforce covenants re-quiring the houses to be restored to their original cond-tion of interior decoration would be both unjust and most wasteful, seeing that workshops at low rents and not superior residences at high rents were in the specified areas alone in demand. If the present lessees were not equitably frested it was probable that the property would pass into the hands " med of straw," a contingency not de strable in the interest of any of the parties concerned. The Estate Committee, however had realised the situation, and a satisfactory arrangement was anticipated. On the subject of the increased rate of interest de On the submanded since the issue of the 42 per cent War Loan, for mortgages, it was resolved that where "undue" interest was demanded the Federation of Associations of Property Owners be asked to bring the matter before Parliament with a view to legislation.

At present Lochgelly Parish Church is being demolished preparatory to being rebuilt, and in interesting discovery has been made. In the foundation stone was found a tin box, in which was a glass jar containing two local reastrapers dated June 29, 1855, a small phial field and one of wine.

At the meeting on Thursday of the School A the meeting on Thursday of the School Beard for Gasgow the Property Committee called attention to the additions to be made to Alan, Glen's School. The committee had examined commercial sengthles for the work, which involved a total sum of £17,476. Along with the Master of Works, they had, in consultation with the architects, gone over the specification, and by cutting off universary frills aid field of a saving of £3,287 without altering the result arrangements. The report was

### COMPETITIONS.

PLYMOUTH.-- Smety six sets of designs have been submitted for the new and extensive buildings to be erected by the Plymouth Mutual Cooperative and Industrial Society, Limited, on the fine open site, bounded by courtenay, Raleigh, and Frankfort Streets, in a ymouth, opposite the present premises of the society. The drawings will be exhibited in the Co-operative Large Hall, but the date for that has not yet been decided. Premiums of £75, £50, and £25 will be Premiums of £75, £50, and £25 will be awarded. Mr. Paul Waterhouse, M.A., F.R.L.B.A., is the assessor. The proper display of goods in the ground floor windows an essential part of the function of the building, and any idea that the architectural style should ignore this purpose will be entirely discouraged. This condition males the problem particularly interesting, as the premises are to accord with the best modern practice of shop architecture. Cost is to competition, but no sum is fixed and no price for, cube is stipulated. We hear that and put doubley is between £90,000 £100,000. Ref brick and Portland are suggested as the materials, added to fire roof construction.

## WATER SUPPLY AND SANITARY MATTERS.

At an early date the town council PERTH will consider a report by the special water and sewige committee as to the water supply and swige disposal questions. The estimated and sware disposal questions. The estimated est of the various water schemes reported on is as follows: Rertha scheme No. 1, £101,000; Bortha scheme No. 2, £30,000; Stormontfield scheme, £105,250; and Water of May scheme, £192,500.

SEWAGE DISPOSAL WORKS AT DAL KEITH The condition of the rivers North in I South Esk has occupied the attention both of the Mid othian County Council and the burghal authorities for a number of years. The Benbugh burn, which runs through Bonn rig; and Dalkeith, was until recently used by both towns as a main sewer, and in view of this it was at first thought that a joint scheme of sewage purification might be convenient. But at Delkeith, where the joint works would have been situated, it was found difficult to get suitable ground of sufficient area, and deemed advisable to act independently. Bonny, site, and the works there were completed some time ago. A site for the Dilkeith scheme was evertually secured at Newmills, on the New-bittle estate of the Marquis of Lothian. In a one respects the site is ideal, being convenient for the read and the river, with suitable levels and an open gravelly soil. With the completion of the Dalketh operations a large volume of sewage which reached the Esk will now be Messis. Gilbert Thomson and Fergu purified. Messis, Gilbert Thomson and Ferguson, civil engineers, Glasgow, designed and supervised the works; and Mr. John Monteith, Diskeith, was the contractor. The estimated cost was £9.350, exclusive of the cost of land

Mr. William Willett the younger, of The Codars, Camden Park, Chislehurst, Kent, head of the firm of Willett and Co., builders, Chelsea and Hove, the promoter of the Daylight Saving Bill, who died on March 4, aged 58, left Bill, wh £557,150.

Glasgow City Council has remitted to a Special Committee to consider and report as to the necessity for, and the expediency of, the corporation building, upon ground belonging to it, or mon suitable ground to be purchased or feued, dwelling-houses of not less than one rosen and kitchen, with bathroom.

or and kitchen, with bathroom.

Mr. Thomas Moulding, M.I.C.E., the city engineer of Exeter, reports to his cornection that in the two years ended March 31 lest 133 miles of road were repaired in Exeter, the stone used amounting to 18,637 tons. During the same period 243 miles of roads, covering an area of 295,466 source varils, were tar sprayed at a cost of £1.264.

At the last marting of the Gelligaer Urban D stret Council Messrs, Willeox and Ruikes, ong neers, submitted plans and specifications for the construction of a sewer in the Cylla and Deri Valleys to link up with the unin crunk sewerage scheme for the Rhymney Valley now the treatment of the property of the sewerage to the construction of the Rhymney Valley now the coverage of the way decided to write to the on progress. It was decided to write to the Local Government Board asking if it would send on the cost of preparing the plans and

### PARLIAMENTARY NOTES.

COMMISSIONS FOR CIVIL ENGINEERS.—Asked by Mr. Watt wnether an application was made in July by his Department to the Institution of Civil Engineers, to procure for them officers for the Royal Engineers who a knowledge of heavy construction work. Tennant has stated that the facts were Mr. Tennant has stated that the facts were substantially accurate. The result had been that nineteen gentlemen had already received commissions in the R.E., and the consideration of the qualifications of others was proceeding, with a view to the filling of further vacancies which might occur.

ECONOMIES BY HM. OFFICE OF WORKS.—Mr. Harcourt, First Commissioner of Works, has informed Sir E. Cornwall that the whole of the Votes taken for the Office of Works for 1915-16 had been carefully reviewed on the basis that nothing was to be done that was not absolutely necessary, that was, for reasons of health, to avoid actual deterioration of buildings, or to allow of the efficient working of departments. Practically all new works not subject to running contracts had been postponed. The reductions applied to all departments except the Convalescent Hospital at Osborne, where obviously no economy was possible. By this action it was hoped to save about £250,000 this year and a further saving of over £500,000 on next year's Estimates.

THE GOVERNMENT'S TIMBER CONTRACTS.—In the House of Commons on Thursday Mr. C. T. Needham asked the First Commisstoner of Works whether, having regard to the special conditions in the new Government contract for building work in respect of the com-pulsory purchase of supplies of timber from His Majesty's Office of Works, it is the intention to majesty's Omee of Works, it is the intention to take over all the existing stocks of timber in the merchants' hands? If not, what is the reason for the condition that timber must be hought from His Majesty's Office of Works, thus excluding the competition by timber merchants and importers? And, why must contractors take delivery of timber as and where it lies, in view of the existing close relations of the Government and the railways?—Mr. Harcourt replied: The The answer to the first question is in the negative.

The answer to the second is that the object of the contracts is to benefit the taxpayer by restricting the sphere in which private profit oper-ates, and by extending, with that object, the arrangement under which any department supplies certain classes of timber to the War Office. The answer to the third question is that the arrangement was judged most convenient. I may add that, in view of the urgency of this particular requirement and the heavy demands Government stock for other needs, it is proposed to arrange that those stocks are only to be drawn on for this purpose by certain contractors near defined ports of entry, and that other contractors will obtain their own supplies.

The Passmore Edwards Museum at Newton Abbot, which was gutted by fire on Thursday, when a yaluable collection of antiquities and geological and mineral specimens was totally destroyed, was built, together with the adjoining Technical Schools (which also suffered from the flames), from designs by the late Mr. Silvanus Trevail, and was illustrated in a suffered flames of black 1999. Mr. Silvanus Trevail, and was illustrated our issue of July 1, 1902.

The death has taken place at Brighton of the "golden dustman," Mr. Charles Murrell, of Blackfriars Bridge Wharves, contractor for the removal of dust to many London boroughs and district councils, including the City of Westminster, Southwark, Lambeth, Richmond, Mortlake and Wimbledon, Mr. Murrell succeeded to his father's business in Bermondsey as a coal merchant and street and house refuse contractor, and eventually remove labout 250,000 tons of refuse every year.

The forty-fifth autumn exhibition at the Wilker Art Gallery will be opened on October 9, and centinue open until Saturday. January 8 next. This year's collection of pictures is representative of the art movement of the day, besides having several novel features of especial interest. Prominent among these is the collection illustrating modern Belgian art. An effort has been made to provide a reart. An effort has been made to provide a representative collection, including examples of some of the great artists of the immediace past, such as Baron Henry Levs, Alfred Stevens, P. J. Clavs, and Henriette Romer. The customary "one-man" room this year is devoted to Burmese pictures by Mr. Gerald Festus Kelly. There is a special collective exhibit by the Royal Society of Miniature Painters, and for the Black and White Room a very representative selection has been obtained, a special feature being made of the etchings of Mr. James M. Bev

# Building Intelligence.

BRISTOL.—A group of building course of erection in Cooncester Road to a Bristol North District Baths. The school The school provides for a series of slipper baths and a laundry department, in addition to a swima family department, in admitton to a swim-ming bath, but only a portion is being pro-ceeded with for the present. There are to be eight first-class and ten second class-slipper baths, eighteen needle and shower baths for men, and eight slipper baths and a like number of baths for women. The a like number of baths for women. The plans were prepared in the office of the city engineer. Mr. Lessel S. Mackenzac, C.E. The walls are of local brickwork, the front to Gloucester Road being of red pressed facings, with Bath stone dressings. The portion of the buildings containing the symming bath consists of a ball 100 ft. by 54 ft. and the water area of the bath is 75 ft. by 30 ft., the depth varying from 4 ft. to 7 ft. Galleries will be provided on two sides, 8 ft. 6 in. wide, and at one end 12 ft. wide. The swimming pool is constructed with feement concrete, lined with asphalte and faced with white glazed bracks, while the gangways are to be paved with Ruahon corrugated paving tiles. There will be four exits communicating with the street and four staircases leading from the galleries. There will also be competitors' rooms each 15 ft. by 16 ft. 6 in., a club room 17 ft. by 15 ft. 6 in., two dressing-rooms, and kitchen There are also the usual lavatories, attendant's office, and shower bath.

HONLEY.—On Wednesday HONLEY.—On Wednesday Mr W. Brooke, J.P., laid the last stone in connection with the widening of Honley Bridge, and Councillor Elon Crowther, J.P., charman of the urban district council, performed the opening ceremony of the new council offices. Not only has Honley Bridge been widened, but Eastgate also. The existing bridge consists of two spans of stone arches, and was 24 ft. 6 in, wide. The improvement now makes the bridge 36 ft. wide, comprising 6 ft. for the footpath and 30 ft for the carriageway. The approaches at either end of the bridge have also been consider end of the bridge have also been considerably improved. The work has been carried out by Mr. Alfred Firth, contractor. Shepley. Eastgate was formerly very narrow and steep, and the bend was most difficult for traffic to negotiate. In this improvement the sharp bend has disappeared. the old buildings standing on the ground required for widening have been pulled down, and a wide road with a gradual sweep round the corner has been made, varying in width from 30 ft, at its narrowest point in width from 30 ft, at its narrowest point to 49 ft, at the widest point at the bend. The work has been carried out by Messis. S. and S. Sykes, Golcar. The plans for both works were prepared by the architects to the Honley Urban District Connect, Messis. J. Berry and Sons, Huddersfield, and the work has been carried out under their supervision at a total outlay of £7,500.

NUNEATON.—Owing to the rapid industrial and municipal progress of Nuneaton, the London and North-Western Bailway Company is carrying out an improvement in railway facilities. An extensive reconstrution scheme, embracing the building of new offices and waiting rooms, new bays for branch line trains, and new refreshment and luncheon rooms is being executed. The general alterations to the station include the provision of a new bay for the Ashby-de-la-Zouch branch trains and the extension of the bay for the Coventry and Leicester trains.

ROSYTH.-Dunfermline town-planning scheme has developed so far as to permit of the immediate erection of houses on the new area at Rosyth. At Friday's Dean of Guild Court there were presented by the Guild Court there were presented by the Scottish National Housing Company, Ltd., four petitions for warrant to erect 292 houses of four different types, the estimated cost of each house ranging from £250 to £318. A petition was also lodged for the laying-out of new streets, at an estimated cost of £3,000. The representatives of the company present included Mr. Alfred Greig, consulting architect, and Mr. A. H. Mot-
